Fourth Biennial Report

OF THE

Department of Engineering

OF THE

State of California

---

DECEMBER 1, 1912, TO NOVEMBER 30, 1914

CALIFORNIA  
STATE PRINTING OFFICE  
1914

## LETTER OF TRANSMITTAL.

---

November 30, 1914.

*Honorable* HIRAM W. JOHNSON,  
*Governor of the State of California.*

SIR: Pursuant to the provisions of an act of the Legislature approved March 11, 1907 (Chapter 183, Statutes 1907), I respectfully submit herewith for your consideration the fourth biennial report of the operations of the Department of Engineering for the period from December 1, 1912, to November 30, 1914, inclusive.

Respectfully,

W. F. McCLURE,  
State Engineer.

## LETTER OF TRANSMITTAL.

---

November 30, 1914.

*Honorable* HIRAM W. JOHNSON,  
*Governor of the State of California.*

SIR: Pursuant to the provision of an act of the Legislature approved March 11, 1907 (Chapter 183, Statutes 1907), I respectfully submit herewith for your consideration the fourth biennial report of the operations of the Department of Engineering for the period from December 1, 1912, to November 30, 1914, inclusive.

Respectfully,

W. F. McCLURE,  
State Engineer.

# BIENNIAL REPORT OF THE DEPARTMENT OF ENGINEERING.

---

## INTRODUCTION.

In presenting this, the fourth biennial report of the Department of Engineering, it is deemed proper to invite special attention to certain matters relating to the work as set forth herein.

Comparatively few people, it is believed, have comprehensive understanding as to the extent of the field covered by the work of this Department, nor of the amount of public moneys the expenditure of which is placed by law under its direction.

It is believed that a perusal of this report of the various and extensive activities of the Department will convince the reader that to accomplish its full purposes in all the lines delegated to it, every facility should be provided for transacting its business promptly with the public and comfortably to its members and employees.

The Department has never had adequate quarters. Its office force is crowded into small, poorly lighted rooms without proper ventilation, and never in its seven years of existence has the Department been all housed in one building. The executive and architectural divisions have been occupying rooms on four floors of the Capitol, while two divisions were placed in downtown office buildings a block or more separated and three or four blocks from the Capitol.

These matters are not mentioned in the way of criticism, for the writer fully appreciates that those whose duty it is to provide quarters for all State offices have done their utmost, but rather to emphasize remarks to follow.

In the report two years ago, in commenting upon those adverse conditions it was remarked:

The designing of public works which falls to the Department requires diligence, skill, experience and the highest order of professional integrity, and to command the services of men possessing these qualifications the Department must be in a position to offer comfortable quarters, congenial surroundings and remuneration commensurate with the character of service sought to be obtained.

The volume and character of the work accomplished, as set forth in the pages of this report, performed as it was under the conditions described, testify to the loyalty and efficiency of the officers and employees who have accomplished it.

The Department has occupied a large number of rooms in the Capitol designed for the use of committees of the legislature.

In the interim between sessions this arrangement could obtain, but with the approach of each session these rooms had to be surrendered, and the resulting congestion of the Departments in the remaining rooms entailed much discomfort.

The Superintendent of the Capitol and the Board of Control have secured offices in the Forum building, Ninth and K streets, for the Department of Engineering. The Highway Division has occupied rooms in that building for more than three years. All of the Department now in the Capitol, excepting the Motor Vehicle Division, will be moved, as also the Flood Control Division, which is now in the Nicolaus building, so that the Department will be more nearly united in location of its several parts than ever before.

This arrangement will probably continue until new office building authorized by the last legislature shall be constructed.

While it is anticipated that considerable inconvenience will result from the Department being so far away from the other departments of the State with which it has close relations, it is felt that the relief from the cramped conditions under which it has worked so long will be a great comfort.

Attention is invited to the summary of work executed by the Architectural Division, wherein is shown that the architectural service, including inspection of construction for buildings costing nearly one and one-fourth million dollars, was 5½ per cent. In this connection it is well, too, to consider that the plans prepared by the Department are more complete in detail than ever were furnished for public buildings before the time this Department began making them.

Attention is also directed to the discussion of the work of the purchasing office, and the remarkable growth of business accruing to that section.

Under hydroeconomics the discussion of matters pertaining to flood control and particularly the demands for State assistance coming from sufferers from ravages of floods from streams other than the Sacramento and San Joaquin rivers, is commended for consideration, as well, also, as the desirability of extending the jurisdiction of the State Reclamation Board, by enlarging the Sacramento and San Joaquin Drainage District.

The results of research conducted by co-operation between the Department and the several branches of the Federal government are discussed at some length, and it is earnestly recommended that appropriations therefor be continued. Particular attention is invited to the research conducted in the field of irrigation inquiry in which it is believed much valuable information is set out.

In the matter of river work, every effort has been used to conserve the funds and accomplish effective work, full exposé of which is set forth under the appropriate headings.

The question of canalization and canals has been under investigation by the Department, but it is not deemed proper to burden this report with a discussion of the subject until the data shall be amplified by physical examination of probable routes of inland water traffic. This it has not been possible to do without funds, but the Department is prepared to show the desirability of further prosecution of studies along the lines indicated.

The benefits that have accrued to the State from greatly improved maintenance work on the State roads due to funds obtained from the motor vehicle license, is set out under the heading of State roads. These benefits are made evident by the marked increase in travel over those roads as shown by comparison of the census of 1913 and 1914, appearing in tabular form.

Attention is called to the growth and expansion of business transacted by the Department of Engineering since it was first established without a commensurate increase being made in the contingent fund allotted for the use of the Department. This is a matter that it is earnestly hoped will not be lost sight of in making appropriations for the support of the Department.

The cordial relations sustained between the Department and the various branches of the State government, the several institutions and the many branches of the Federal government with which co-operative work has been conducted, has been a source of personal satisfaction and the State Engineer takes this opportunity of acknowledging the many courtesies received at the hands of all with whom dealings have been had.

# BIENNIAL REPORT OF DEPARTMENT OF ENGINEERING.

## HISTORY.

Although the organization of the California State Department of Engineering dates back only to 1907, the advisability of placing certain governmental functions under scientific direction was early realized by the pioneers who founded this state on the Pacific shore.

We of today are wont to think of the early days of California as given over to a mad rush to the gold mines, without a thought being given to other lines of endeavor than that of digging for the yellow metal. Perusal of official records, however, discovers that the sturdy builders who laid the foundation for this commonwealth had prophetic vision to see the vast opportunity offered by the fertile lands and salubrious climate for the establishment of homes and the expansion of commerce and all the concomitant activities of a populous and busy state.

The first legislature was convened at San Jose in December, 1849, and continued its session into the early months of the succeeding year.

In January, 1850—eight months before California was admitted to the union of states—a bill was enacted and became a law, creating the office of Surveyor General and defining his duties. In addition to his other duties prescribed in general terms he was specifically directed to make a scientific survey of the boundaries of the state; make an accurate map of the state; survey and fix the boundaries and corners of counties. He was made a member of a Commission of Internal Improvement and ex officio chief engineer of the Commission, and as such he was required to make annual report showing:

Progress of surveys and of state map: Plans and suggestions for the improvement of the internal navigation of the state and for the construction and improvement of roads, turnpikes, railroads, canals and aqueducts; also plans and suggestions for the planting, preservation and increase of forests of lumber trees, for the draining of marshes, prevention of overflows and the irrigation of arable lands by means of reservoirs, canals, artesian wells or otherwise; prepare statistics of state lands and of lands adapted to tillage and grazing; number of horses, cattle and other stock, and their value; amount of farm produce of all kinds, with his views as to presence and cause and the remedies for diseases that injure such products; quantities of all mineral lands and quantities and value of mineral products.

A perusal of the schedule of duties prescribed for the Surveyor General shows that the question of the conservation of natural resources so actively advocated by the progressive elements in political and industrial activities today is not a new fad. More than sixty years ago the lawgivers of California directed research to be made along many of the lines now being pursued. And had the program laid down in 1849

and 1850 been carried forward by placing its execution in the hands of competent men, supported by adequate appropriations, what a wealth of information would have been acquired and what a difference would have resulted in the magnitude and stability of the state's industrial development! But without sufficient funds, and often with men in office who had no higher aims nor better conception of the duties imposed by the law than shown in the report of an early incumbent, the elaborate plans laid by the prescient minds of the pioneer builders of the commonwealth fell far short of realization.

To repeat: Had energetic, broad-minded and public-spirited men been entrusted with the duties enumerated, and given adequate funds to conduct research and for carrying out such projects as would have been evolved, many of the problems of economic development with which we are struggling today would have been solved and our people would now be reaping the benefits.

But unfortunately the office to which these functions were delegated was a political one, and was often occupied by men more intent upon rendering service to their party than to the state.

When, perchance, a man was elected who was inspired by loyalty to the state to devote his energies to the tasks enjoined upon him by the law, he was hampered by the failure of the legislature to provide adequate funds to put into being any of the public projects deemed so desirable by the first legislature above described.

With the growth of the state and its needs becoming more apparent the demand for action became insistent.

As new industries were inaugurated and old ones expanded, many of the duties imposed upon the Surveyor General by the statute quoted were transferred to others. Research into mineral resources was delegated to a State Geologist and later conducted by a Mining Bureau and State Mineralogist. Matters pertaining to agriculture and horticulture were, as now, handled by the Agricultural Society and Horticultural Commissioner. Problems in forestry are referred to the Board of Forestry. And so with other subjects requiring technical training for their administration, all being assigned to officers, boards, or commissions specially fitted or purposely organized for the particular work required.

As time went on some industries became antagonistic to others. Hydraulic mining in the mountains continued unabated. Farmers in the valley whose crops were destroyed by floods claimed the disasters were augmented, if not caused, by the filling of the river channels with detritus from the mines. Navigators on the streams complained that their business was injured from the same cause. Anti-debris associations were formed to attempt the prevention of mining. Miners'

protective associations were organized to resist what the miners considered encroachments upon their rights.

Other antagonisms arose. The first settlers were attracted to the moist lands along the banks of the streams, where the perennial inundations caused the native grasses to grow luxuriantly, furnishing abundant feed for stock without cost to the settler. Later other settlers occupied the lands remote from the streams, but found it necessary to bring water in canals from the rivers to irrigate their lands and cause them to produce remunerative crops. The man on the banks, at first indifferent, soon discovered that his lands were, or might become, deprived of their natural source of fertility and began to quarrel with the neighbor who had diverted water from the stream above him. Strife ensued between the appropriator and riparian claimant, as well as between the valley farmer and the miner. Armed contention became frequent and bloodshed followed.

The existing laws failing to define the relative rights of contending parties and both sides in each controversy setting up claims that could not be ignored, it became necessary to create an agency to conduct a line of research to gather facts—scientific facts—from which to define conditions, determine causes and prescribe remedies.

More than a quarter of a century after the first legislature had directed the matters to be done as enumerated in the beginning of this chapter, the legislature of 1878 again took up the questions, and by an act approved March 28th, entitled "An act to provide a system of irrigation, promote rapid drainage and improve the navigation of the Sacramento and San Joaquin rivers," inaugurated the first organized effort along the lines so long considered.

This act created the office of State Engineer and directed him to make investigations, to ascertain facts and express opinions concerning the water-carrying capacity of the Sacramento and San Joaquin rivers in the different sections which are liable to overflow; whether their capacities could be increased and by what means, and the cost thereof; the maximum flood flow and whether works could be devised to enable the streams to carry it; to ascertain changes in the river beds, if any, their cause, and legislation necessary to correct and arrest such changes; area of arable lands and quantity of water available for irrigation, etc., and such other investigations as appeared necessary for the solution of the several problems involved.

William Ham Hall was appointed State Engineer to direct the work for which the department was created. His corps of assistants included such men as C. E. Grunsky, Marsden Manson, James Dix Schuyler, and others, whose later professional attainments have given them illustrious positions in the world's engineering field.

A vast amount of data along all the lines demanded was collected and portions of it were published, but before it could be digested and presented in form to be of value, political bickerings and a parsimonious spirit cut off the appropriations, and finally repealed the law creating the State Engineering Department. Thus was lost the fruits of years of toil in accumulating information needed in the formulation of laws and execution of works to correct grievous conditions that had so long been suffering for relief. To discontinue the State Engineering Department and its labors, at the time when—to use a homely figure of speech—it was just “getting on its feet,” was a blunder little short of a crime.

Research along the lines inaugurated by that engineering department before its demise has been pursued spasmodically by different boards, commissions or individuals, but there is in every line an interruption of continuity of the record which more or less discredits deductions drawn from such incomplete data. To cite an instance: A hiatus exists in the record of stream gagings from the suspension of work by the State Engineer in 1884 until observations were commenced by the United States Geological Survey in 1894. In 1904 a board of eminent engineers, the members of which had been engaged for many years in successfully carrying out similar enterprises, offered an elaborate plan for the control of floods on the Sacramento. The magnitude of the works was designed in accordance with the best information obtainable as to the quantity of storm water to be provided for. But the records of flood flow secured since 1904 by cooperative effort between the Geological Survey and the state have caused the engineers submitting the latest scheme (which the legislature has approved) to provide channel-way for two and three tenths as much water. That is to say, later research indicates that more than 600,000 cubic feet of water a second must be cared for as against 260,000 second-feet, believed to be the maximum according to the data available in 1904.

With the continually increasing number of industries depending upon technical direction, advice, or assistance—which no other agencies could so well provide as the government—came additional commissions or boards to conduct research and direct administration. To consolidate several of these agencies into one with a single executive head the legislature in 1907 provided for the organization of the State Department of Engineering.

The act creating this department (Chapter 183, Statutes 1907, approved March 11, 1907) abolished the offices of Commissioner of Public Works, Auditing Board to the Commissioner of Public Works, Department of Highways and State Highway Commissioner, Lake Tahoe Wagon Road Commissioner, and Debris Commissioner, and dele-

gated the performance of their several duties to the Department of Engineering. To the department was also assigned all engineering work for the Board of Harbor Commissioners of San Francisco and the design and construction of buildings and works for all the hospitals, prisons, and schools, and other state institutions. It was given authority to cooperate with the Department of the Interior and other departments and bureaus of the national government in making surveys, investigations, etc.

Mr. Nathaniel Ellery was appointed to the position of state engineer and chief executive officer of the Department of Engineering, and assumed the office May 11, 1907. He was succeeded in office by the appointment of Mr. Wilbur F. McClure, February 13, 1912.

The records of the organization of the department and the work accomplished by it from the date of its establishment to November 30, 1912, have been published in the biennial reports issued in 1908, 1910, and 1912, respectively, and it is the office of this report to review the operations of the department during the biennial period just closing.

Since the department was created, each session of the legislature has enacted laws amending the statutes affecting the work of the department, the most notable of which was to enable it to handle the administration of the State Highways Act of 1910, which appropriated \$18,000,000 for a system of state highways. Many of the statutes enacted have added greatly to the functions of the department.

### DEPARTMENT OF ENGINEERING.

Under the statutes now in force the Department of Engineering is composed of three bodies: Advisory Board, Consulting Board, and Executive Force. These three bodies are constituted respectively as follows:

#### THE ADVISORY BOARD.

Governor, ex officio member and chairman.

General Superintendent of State Hospitals, ex officio member.

Chairman of Board of State Harbor Commissioners of San Francisco, ex officio member.

State Engineer, appointed by the Governor, ex officio member.

Three members, appointed by the Governor.

The Advisory Board is the administrative head, and directs the operations of the department through the State Engineer, who is the chief executive officer of the department.

The ex officio members receive no salary as members of the Advisory Board. The three last named appointed members of the Advisory Board are delegated as a special executive committee of the board to administer the affairs of the \$18,000,000 state highway bond project, and

bear the title of State Highway Commission. These members are paid salaries.

#### THE CONSULTING BOARD.

This board is composed of five members appointed by the Governor and serve without compensation. The functions of this board are to act as intermediary between the people desiring public work done on the rivers and the Department of Engineering; receive and consider petitions and make recommendations to the department in regard to proposed work pertaining to drainage, irrigation, and river improvement. This board holds meetings at the call of the State Engineer.

#### EXECUTIVE FORCE.

State Engineer, Chief Executive Officer.

Two Assistant State Engineers.

State Highway Engineer.

State Architect.

Mechanical Engineer.

Testing Engineer.

Architectural Designer.

Three Architectural Draftsmen.

Two Engineer Draftsmen.

Secretary.

Two Clerks and Stenographers.

Two Filing Clerks.

Blue Print Pressman.

Porter and Messenger.

One of the assistant engineers and one engineer draftsman are assigned to duty with the State Board of Harbor Commissioners at San Francisco.

The foregoing comprises all of the "statutory" employees of the department.

The field of operations conducted by the Department of Engineering has been continuously expanding, so that it has become necessary to arrange its executive force into sections, for better administration. The expansion of the department's field of operations has been so rapid that it was found necessary to create additional offices to execute the work demanded.

The universal employment of electricity for lighting, power, communication, and in the hospitals its extensive use in therapy, requires a large force of electricians, and to properly direct their work, the employment of an electrical engineer is necessary.

A vast amount of construction and repair of state property is done directly by the Department of Engineering, entailing the purchase of immense quantities of materials, machinery and apparatus.

Plate I. Fresno Normal School.

Plate II. Training School, Chico Normal School.

Plate III. Training School, Open-air Class, Chico Normal School.

The orders sent out have averaged about sixty a day, and each order is based upon quotations of price from never less than three competitive dealers. To effect economy in this line a purchasing office is maintained under the direction of a purchasing agent.

The expenditure of several millions of dollars entrusted to the department requires a considerable force of accountants, directed by an auditor.

In addition to those enumerated above, the department has required the services of draftsmen, architectural and structural engineers, surveyors and their crews, superintendents, inspectors, and men in many other capacities, down to cooks, waiters, and roustabouts in the road and river construction camps.

The foregoing list of employments indicates to some extent the varied nature of the department's activities and the extent of the field covered by it. Its duties, as specified by several statutes, are summarized as follows:

To make plans and specifications for all buildings at the various state institutions, to let contracts for and superintend their erection, or, in case satisfactory contracts can not be made, to construct the buildings by day labor. To design and install all heating, lighting, ventilating, refrigerating, water supply, sewerage, and mechanical plants of every nature—whether changes, extensions or original. Survey grounds, lay out walks, drives and roads; provide water supply, irrigation, reclamation, sewer and drainage systems, requiring the design and construction of dams, reservoirs, pipe lines, wells, pumping plants, ditches, sewage treatment and disposal plants and drains.

Design and construct works for the protection of river levees, preservation of navigation and protection from floods.

Conduct research looking to the reclamation of the overflow basins and to effect flood control on the Sacramento and San Joaquin rivers.

Studies of the feasibility of navigable canals and canalization of rivers.

Through the engineering force assigned to the Board of Harbor Commissioners, to design and direct the construction of wharves, piers, buildings and their equipment on the water front of San Francisco.

Location, construction, repair and maintenance of state roads, of which there are nearly 600 miles in the mountain regions.

Through the Highway Commission, the location and construction is being conducted of the system of highways authorized by the eighteen million dollar bond act.

The administration of the Motor Vehicle Act, involving the issue and registry of all licenses for motor vehicles. The issuance of licenses for

the operation of motor vehicles was placed in the Department of Engineering by an act approved May 31, 1913. To handle the matters pertaining to this required the erection of a division especially for that purpose.

By cooperation with the federal government a topographic survey of the state is being made; daily measurements are made of the water flowing in all the principal and many of the minor streams of the state; studies of possibilities for developments of power in the mountains and irrigation in the plains; investigation of the use and abuse of water in irrigation; the quality of waters, etc.

This department is required to cooperate with the engineers of the war department in matters concerning débris control, flood control, and aid to navigation.

The State Engineer is required to investigate and pass upon the feasibility of the enterprise before an irrigation district can be organized. He is a member of the Irrigation District Bond Commission and is required, upon application, to investigate the engineering features of the projects of existing irrigation districts, where the latter desire to have their bonds accepted as state securities, and supervises the construction of works executed with proceeds of validated bonds.

He is ex officio a member of the State Water Commission, created by an act to be approved by the people at the coming election, which body will have control of all water appropriations and the adjudication of water rights.

The State Engineer is required by law to direct the engineering investigations for the Reclamation Board to determine the proper location and sufficiency of proposed reclamation works, so that they shall conform to the plan for the flood control adopted by the state.

Plans for all bridges to cross navigable streams are required to be approved by the State Engineer before they are permitted to be erected.

In addition to the active duties enumerated above, the department conducts an extensive correspondence, answering queries from all over the country seeking information in regard to the extent of drainage, reclamation, irrigation and power developments, and many other lines of progress in the state, and the costs thereof. If the information is at hand or can be obtained it is always furnished. This is done upon the theory that all public offices should be in a measure publicity bureaus, and the dissemination of correct information as to the resources of the state and its advantages is a proper function of all branches of the government.

The department has been called upon by municipalities for advice in regard to sewage disposal; by communities asking for the examination of dams, as to their stability and safety, and specifications to strengthen the same, as well as advice regarding flood protection and stream control in different portions of the state. While these are not duties

enjoined by law upon the department, the State Engineer has always responded to such requests and given such assistance in an advisory way as the department was able to furnish, and it is gratifying to know that such aid has been regarded of value by the recipients.

### PERSONNEL.

At the date of this writing, November 30, 1914, the Department of Engineering is organized as follows:

#### ADVISORY BOARD.

Hiram W. Johnson.....Governor (Chairman)  
 W. F. McClure.....State Engineer  
 J. J. Dwyer.....President State Board of Harbor Commissioners  
 F. W. Hatch.....General Superintendent of State Hospitals  
 Charles D. Blaney (Chairman), N. D. Darlington, Charles F. Stern (succeeded  
 B. A. Towne, resigned).....State Highway Commission

#### CONSULTING BOARD.

Alexander Gordon.....President  
 G. W. Tatterson, Stockton.....M. J. Boggs, Colusa  
 W. J. Smith, Grand Island.....E. S. Brown, Sacramento

#### EXECUTIVE FORCE.

In addition to the above, which constitutes a permanent force required for the orderly conduct of the various duties devolving upon the Department of Engineering, there is a large number of semi-permanent and temporary employments such as road engineers, foremen and laborers, teamsters, cooks, etc., employed on mountain roads during the summer; foremen, laborers, cooks, etc., employed from time to time on river work; draughtsmen, tracers, computers, inspectors, etc., required in the architectural division during rushes of work, and extra clerks and stenographers in the motor vehicle division near the end of each year to prepare and ship new license plates to automobile owners.

## STATE INSTITUTIONS.

---

The state institutions for which the services of the department of engineering are required under the law, are as follows:

### **Educational.**

Chico State Normal School.  
Fresno State Normal School.  
Humboldt State Normal School, Arcata.  
Los Angeles State Normal School.  
San Diego State Normal School.  
San Francisco State Normal School.  
San Jose State Normal School.  
Santa Barbara State Normal School of Manual Arts and Home Economics.  
San Luis Obispo State Polytechnic School.

### **Eleemosynary.**

California Institution for the Deaf and the Blind, Berkeley.  
Industrial Home of Mechanical Trades for Adult Blind, Oakland.

### **State hospitals.**

Agnews, Agnew, Santa Clara County.  
Mendocino, Ukiah, Mendocino County.  
Napa, Napa, Napa County.  
Norwalk, Norwalk, Los Angeles County.  
Southern California, Patton, San Bernardino County.  
Stockton, Stockton, San Joaquin County.  
Sonoma State Home (for feeble-minded children), Eldridge, Sonoma County.

### **Punitive.**

State Prison, Folsom, Sacramento County.  
State Prison, San Quentin, Marin County.

### **Reformatory.**

Preston School of Industry, Ione, Amador County.  
Whittier State School, Whittier, Los Angeles County.  
California State Reformatory, Yountville, Napa County (not yet established).  
California State School for Girls, Ventura, Ventura County.

**Military.**

Veterans' Home, Yountville, Napa County.  
State Arsenal and Armory, Sacramento.  
State Armory, San Francisco.  
State Armory, Los Angeles.

**Miscellaneous.**

State Capitol, building and grounds, Sacramento.  
Governor's Mansion, Sacramento.  
State Printing Office, Sacramento.  
State Fair, buildings and grounds, Sacramento.  
Sutter's Fort, buildings and grounds, Sacramento.  
Harbor Front, wharfs, piers and buildings, San Francisco.  
Mission Solano, Sonoma County (restoration).  
Los Angeles Exposition Building, Los Angeles.  
State Office Buildings, Sacramento (authorized, not commenced).  
State Office Buildings, San Francisco (authorized, not commenced).

**Architectural service at state institutions.**

All work of the department pertaining to state buildings, whether relating to the preparation of plans and specifications, or erection and installation, including mechanical plants of every kind, is executed by the architectural division of the department, and a review of the work, accomplished by that division will be found under the appropriate caption.

**Engineering service at state institutions.**

Whenever improvements are contemplated at an institution, whether it be a new building, or whether water pipes, sewers, walks or drives are to be extended, the first thing needed is a topographic map, showing the location of existing buildings and all the natural and artificial topographic features of the grounds. To meet this demand the department has from time to time executed surveys at several institutions and constructed maps thereof, so that now the department possesses such maps of nearly all state institutions.

The engineering service executed since its last biennial report, other than that performed under the direction of the architectural division, has been as follows:

**Veterans' Home.**

*Water supply.*—This ever present question at public institutions reached an acute stage at this home. The ordinary domestic supply is obtained from wells and is pumped into tanks situated on a hillside above the buildings. This is supplemented for irrigation by a supply

from a reservoir three fourths of a mile up a rocky ravine. The dam forming this reservoir is a "rock fill" dam sixty feet high. It was built several years ago, to a height of fifty feet, but failed to hold the water. Several attempts were made to render it water tight, but without success. When the Department of Engineering came into existence in 1907, the dam was remodeled. The old lumber skins (of which there had been three, put on one above another) were removed and a concrete facing put on, well trenched into the bedrock. The dam was also raised ten feet in height, and when the water came the reservoir filled to the top, whereas sixteen feet had been the greatest depth held before. The reservoir is fed by the canyon in which it is situated but, having a very limited watershed, the stream ceases to run almost by the time irrigation begins, so that one filling is all that can be obtained, although the stream is estimated to flow an amount about twice the capacity of the reservoir, which is 22,000,000 gallons.

A representative of this department made an examination of every canyon and ravine or flat of the estate. Several places had been recommended as suitable reservoir sites, but none were found which appeared to the professional mind as being well adapted for the purpose. There are several locations where storage may be found; one a short distance above the present reservoir and one or two below, but none possessing capacity commensurate with the probable cost.

The dry summer of 1912 curtailed the supply of water to a point that entailed actual discomfort. The reservoir was entirely exhausted; the wells ceased to furnish their wonted flow, and despite the practice of the utmost economy in the use of water, lawns, trees, and shrubbery showed plainly the effects of drought. Water for baths, laundry, and flushing was restricted to the lowest possible limit, and yet it seemed that suffering must ensue unless relief was quickly found. The commandant and the engineer of the power plant had discovered that several wells in the valley just off the lands of the Home were reported to be capable of furnishing large quantities of water and suggested that a well in the same vicinity might yield a supply.

There being no appropriation available it was imperative that whatever relief could be found must be such as could be provided at a cost within such limited amount as could be spared from the contingent and maintenance funds of the institution.

Upon request, this Department investigated the matter and recommended the excavation of a large pit at the border of the property of the Home, in a position where the configuration of the ground indicated that the same underground stream should be encountered which furnished the wells of known good flow.

An elliptical pit 20 by 30 feet in dimensions and about 30 feet deep was dug and curbed with a rock wall all around. A pump and motor were installed and a pipe line laid connecting into the piping system at the buildings, which enabled a fair supply of excellent water to be obtained.

This expedient, while relieving the drought conditions, is an expensive one to operate, requiring the pumping of the water through pipes more than half a mile and against a head of about 170 feet, all of which is expensive.

The state had acquired a large tract of land known as the Frye Ranch, some four miles away. Upon this property is a perennial stream affording more water than the land will be able to utilize for a long time. An appropriation was made to lay a pipe line to convey a portion of the water to the Veterans' Home. The amount of the appropriation, \$12,000, was determined without consulting the Department of Engineering, and without sufficient data as to the requirements. It had been supposed that a 4-inch pipe about four miles long would be required, which could have been installed for the funds appropriated, but when the surveys were made by the Department it was found that six miles of pipe would be required to reach a point sufficiently high to force the required quantity of water through a 6-inch iron pipe.

It was found, however, that a wood-stave pipe, five inches in diameter would deliver the required quantity and could be installed for a sum within the appropriation. That type was adopted and the Home now has a daily supply of more than 100,000 gallons in addition to its former supply from wells and storage.

*Sewer system.*—Formerly the sewage of the Home was discharged into a ravine which traverses the lowlands and discharges into Napa River. This practice resulted in creating a nuisance which the health authorities ordered to be abated.

Appropriations have been made from time to time, which have enabled the Department to gradually improve conditions by first constructing hydrolytic tanks for the liquefaction of the sewage, followed by the addition of treatment apparatus, and finally the relaying, during 1914, of a complete system of sewer pipes to take the place of the old system, which was extremely faulty in design and construction.

The present plant is operated satisfactorily.

#### **Stockton State Hospital.**

*Flood protection.*—The hospital possesses a farm about two and one half miles north of Stockton, which lies along the Calaveras River. The land is protected from the waters of this river and from the back water of the San Joaquin River by levees enclosing it on three sides.

But the banks of the Calaveras River several miles upstream are not provided with adequate levees, and a recently constructed canal, made by the Federal Government to divert the water of Mormon Slough into the Calaveras River, brings so much water from the slough that the river is engorged and overflows its banks. The escaping water follows depressions in the plains over and across intervening lands, and in a flood during the spring of 1909 it accumulated on the farm of the state hospital against the levees, and destroyed the trees of quite a large fruit orchard. The accumulated waters here broke the levee and flowed thence into the San Joaquin River.

An effort was made to enlist the cooperation of adjoining land owners in adopting protective measures, but without success. A means of obtaining relief was later found, which is described in a following chapter discussing river work.

#### **Agnews State Hospital.**

*Water supply.*—The supply of water for domestic use and irrigation is obtained from artesian wells. The principal well, and the one which furnished the domestic supply is near the power plant. The water is pumped into tanks 84 feet above the ground. The summer of 1912 was noted as being one of the driest seasons recorded. The flow from all the wells declined to such an extent that the reserve for fire purposes was seriously threatened. A representative from the Department suggested some temporary expedients for conserving the supply available, which were successful in carrying the institution over the dry season.

The following season, the water supply being inadequate for all purposes, an air-lift was installed in the well at the power house, which increased the supply from this well sufficiently to meet all demands.

*Drainage.*—The outfall sewer at this institution is a 12-inch pipe discharging into a slough four or five miles away, and thence into San Francisco Bay. The pipe is too small to carry more than the sewage, and when the roof drains of the buildings were connected into it the pipe was taxed beyond its capacity. In 1912 a system of surface drains was devised and installed which has taken care of the water from roofs and walks in a satisfactory manner.

*Soil Drainage.*—A large portion of the estate of this hospital is low and swampy in character, producing but a meager quantity of inferior stock feed. The soil would be quite productive if it were thoroughly drained. Some years ago drain tiles were laid in a portion of it, but they were not judiciously placed and have not proven successful. In 1912 a plan was formulated, but lack of funds prevented its being installed. The reclamation of so much land which is so nearly valueless in its present state should be given earnest consideration.

C. Laundry, Southern California State Hospital.

**Mendocino State Hospital.**

*Dam and Reservoir.*—The legislature of 1911 appropriated the sum of \$12,500 for the construction of a dam to create a reservoir in a canyon about two and one half miles from the hospital upon land which the institution had secured some years ago for the purpose of protecting the watershed supplying two other reservoirs on the same creek. For a description of the dam the report of 1912 is here quoted.

Excavation for the foundation began in the summer of 1911, and most of the site was stripped down to bedrock. In excavating for foundation, it was found that rock which had been supposed was bedrock, proved to be a broken mass which had been deposited by a slide from the mountain side. Extensive explorations were necessary to determine the extent of it, which proved so great that much of the appropriation was expended in reaching material which was acceptable for a foundation. Such was found, however, but at a depth in places, of more than forty feet from the ground surface.

The dam designed is a concrete, gravity section, overflow type. An abundance of hard trap rock is found within a hundred feet of one end of the dam, which is broken out and run in a chute down to the rock crusher. The maximum height from base to crest will be 63 feet, length on crest 350 feet, width of base 38 feet, crest 4 feet.

The outlet is an opening 36 inches wide by 42 inches high, controlled by an iron sluice gate operated from the top of the dam by a screw stem and gearing.

Waste, in excess of the capacity of the outlet to care for, will pour over the crest in a broad sheet only a few inches deep, so no special provision is made for that. A 24-inch pipe is laid through the dam at the level of the outlet to provide means of conveying water under pressure to the hospital, should this be found desirable. This can be easily done by extending a pipe which now takes water from another reservoir about four thousand feet below this dam. This pipe will be closed until a connection shall be made.

The storage capacity of the reservoir is estimated at 45,000,000 gallons. This, in connection with 8,000,000 gallons held by the reservoir below, should provide ample supply for any extension of the institution likely to occur in many years.

The legislature in 1913 appropriated an additional sum of \$12,500, and the work of construction has gone steadily on whenever weather conditions would permit.

The concrete work is up to the 50-foot level. Outlet works are in place.

The work has been done almost wholly by the labor of patients under the direction of F. C. Handy, steward of the hospital, who has represented the Department in all of this work.

*Sewerage.*—The method of sewage disposal at this institution is broad irrigation after the sewage has been liquefied by passing through a hydrolytic tank. At the farm, situated something more than a mile from the hospital, new cottages have been recently erected which necessitated the installation of a separate sewer system, including a small hydrolytic tank. This was completed last year under Mr. Handy's direction.

**Napa State Hospital.**

*Tide Land Reclamation.*—This hospital owns a tract of land lying along the bank of the Napa River, embracing about 380 acres, which is subject to overflow from high tides and from flood water of Tulucay Creek, which traverses it. Two years ago the Department formulated a plan for its reclamation. The legislature of 1913 appropriated \$10,000 for the purpose, with which sum the project has been completed. This adds more than 380 acres of tillable land to the domain of the hospital. The plan as carried out consisted of changing the channel of Tulucay Creek so as to run across the north end of field and empty into Napa River near the station Imola on the Southern Pacific Railroad; constructing a levee along the south bank of the new channel and extending along the left bank of the river to the original mouth of the creek, thence up the right bank of that channel nearly to the railroad bridge across it, where a dam was placed in the creek and extending to high land on the east side.

This places a levee or dike entirely around the low side of the land, thus shutting out the flood water of Tulucay Creek and the tidal flow of Napa River.

To effect the change in the channel of the creek it was necessary for the hospital to purchase a small tract of about two acres at the mouth of the new channel, and for the railroad to build a trestle across the channel and raise its track about three and one half feet. The cost of the entire work was \$10,621.61, including several hundred dollars paid for a right of way that had been verbally promised to be given free and was not included in the original estimate.

**Southern California State Hospital.**

*Railroad Spur.*—It became desirable to have a spur track extended from the main line of the Atchison, Topeka and Santa Fe Railroad Company to the new power house of the institution for the ready delivery of fuel and other commodities.

The railway company and the hospital management failing to arrive at an agreement in the matter, it was referred to the Railroad Commission and Board of Control. An engineer from the Department of Engineering representing the Board and an engineer from the Commission met the representatives of the railway company and agreed upon all disputed points, settling the controversy.

**Norwalk State Hospital.**

*Topographic Survey.*—A survey and contour map of the estate of this institution has been made which has proved useful in selecting building sites.

*Sewerage.*—A general plan for sewage disposal has been worked out and the drawings partially prepared.

Plate VI. Southern California State Hospital (General view).

Plate VII. Cottages, J, K, L and M, Southern California State Hospital.

**Ventura State School for Girls.**

This institution, provided for by an act of the legislature of 1913, was located two miles from the city of Ventura, Ventura County.

*Topographic Survey.*—A survey has been made of part of the grounds sufficient to enable the location of buildings to be made.

*Roads.*—A road from the main highway to the building site is being constructed.

**Sonoma State Home.**

*Water Supply.*—The water for domestic use at this institution is obtained from several springs in the wooded ravines of the hills in the western portion of the estate. The water, which is of most excellent quality, is conveyed in iron pipes to two concrete tanks of about 1,000,000 gallons capacity, each situated on a hill about 150 feet in elevation above the grounds of the Home. From these tanks it is distributed to the buildings and grounds. For many years this source furnished sufficient water for domestic purposes and also for irrigating the lawns, but with an increase in population the supply became inadequate.

In 1910 the Department constructed an earthen dam across the lower end of a small valley in the hills about a mile back of the home, creating a reservoir with a capacity of about seventy-five acre feet. The material available for its construction at the site of the dam is a residual soil formed by disintegration in place of the volcanic rock abounding in this region. The soil is of a clayey nature and extremely incoherent when wet. Recognizing its unstable character, a "puddle core" was introduced consisting of sand and gravel hauled from the bed of Sonoma Creek, two miles away and 370 feet lower elevation. The sand and gravel being mixed with a proper proportion of the local soil, made a very impervious corewall.

In 1911 the height of the dam was raised five feet, its design contemplating that and providing for another five-foot raise if required.

The watershed directly tributary to the reservoir does not ordinarily furnish sufficient runoff to fill it, but ditches have been constructed from two creeks draining adjoining watersheds which will enable the reservoir to be readily filled to its capacity.

A separate pipe system was installed connecting the reservoir to the sprinkling system at the grounds without letting any of this surface water into the domestic supply.

The season of 1912 was unusually dry and, notwithstanding the supply from the reservoir, much inconvenience was felt. A temporary installation of a pump and well in the creek bottom delivering water into the irrigating pipes carried the institution through that season.

The vegetable gardens are situated on the opposite side of Sonoma Creek Valley from the home, and more than a mile away, with a low ridge between.

Irrigation is required for the production of most vegetables grown here, and water for this purpose is obtained from some small springs. During the series of dry years since 1909 these springs have gradually decreased their flow until it became necessary to obtain water from some other source.

A pump operated by a gasoline engine was installed in Sonoma Creek, and a 4-inch pipe laid over the ridge mentioned to a point above the gardens whence the water is distributed.

With all of these expedients the consumption, particularly for domestic use, is so nearly the limit of the supply that it causes much concern, especially in view of the certain need for enlarging the institution.

The legislature in 1913 appropriated \$10,000 for additional water supply, and this is being expended in boring a well in the valley. The well has reached a depth of 350 feet, intercepting two or three small flows of water, but not sufficient for its purpose. Provision is made in the contract to bore to a depth of 700 feet if it be found necessary. It is not possible to predict from the formations exposed that an abundant supply will be reached, but the attempt will be continued with hopes for success.

*Sewerage.*—The sewer system here was constructed many years ago when the population was small and housed in but few buildings. The location of the pipes was not well chosen to meet the demands created by the rapid growth of the institution.

The method of disposal of the sewage was designed by one not versed in sanitary science. It is wrong in principle and has always given trouble.

The last legislature appropriated \$5,500 for the purpose of remodeling the system. A hydrolitic tank is being constructed with provision for chemical treatment of the effluent, and new lines of pipe laid to take the place of badly located lines, the entire scheme of which is arranged for enlargement to meet the requirements of future expansion of the home.

*Roads and Drives.*—The estate of the home comprises about 1,700 acres, nearly all of which is rolling or hilly, the highest portions being nearly a thousand feet above the grounds about the main buildings.

The hay fields as well as some of the best orchard lands are in the uplands, so that much hauling is required from here. The roads are very steep in many places. The soil is easily eroded and when wet

Plate VIII. Cloistered Shelter, Exercise Yard, Male Wards, Mendocino State Hospital.

is given to sliding in masses. Its unstable character, coupled with the steep gradients, make the roads difficult to maintain, and hard to haul over in wet weather.

A group of cottages has been built on a hill overlooking the main buildings and about eighty feet above them. A new road was laid out to them and constructed during the past summer. A method of surfacing was introduced which it is hoped will improve the roadway. Sand and gravel were hauled from the creek bed and thoroughly mixed with the local clay soil, laid on proper grade with gutters to carry away the rainwater. Constructed in this manner, it is hoped a good roadbed will result.

#### **State Fair Grounds.**

An act approved June 6, 1913, appropriated \$10,000 to be used for the disposal of drainage and sewage from the State Fair Grounds at Agricultural Park, Sacramento.

Owing to the absence of any sewers or means of public disposal of sewage in the portion of the city where the fair grounds are situated, sanitary conditions were extremely bad, and growing worse at each recurrence of the State Fair.

In preparation for the fair to be held in September, 1913, there being no sewer in the vicinity of the fair grounds, a temporary system was installed consisting of hydrolitic tanks and cesspools, with an over-discharge into a drain that led out of the grounds.

The unprecedentedly large attendance at the fair taxed the system beyond its capacity, and the discharge through the drain mentioned created a great nuisance in nearby neighborhoods.

To avoid a repetition of these conditions in 1914, prior to the beginning of the State Fair, a pipe line of 4-inch screwed pipe was laid from the hydrolitic tank to connect into a force line from the county hospital, 2,000 feet away, which line in turn connected into the city sewers more than half a mile distant. An electrically driven centrifugal pump was installed to force the sewage through the pipe, and all sewers were disconnected from the drain and connected into the tanks. The expedients sufficed, but the plant was taxed to its utmost.

It is hoped that before another season shall arrive the city's systems will have reached the neighborhood of the grounds, so that all sewage may be discharged directly into them.

## THE ARCHITECTURAL DIVISION—REPORT OF OPERATIONS

From November 1, 1912, to October 31, 1914.

By GEORGE B. MCDOUGALL, State Architect.

The Architectural Division of the Department of Engineering does all architectural work, structural engineering and mechanical engineering, which latter includes power plant, heating, ventilating and electrical engineering, as required in connection with all new construction and all repair work at thirty-two different state institutions, which have a combined population in students, patients and prisoners of about twenty thousand.

There were authorized in 1913 eighty-five appropriations aggregating \$3,058,405 for building construction at these various institutions, and, in addition to this, estimates from the several boards of management have been approved during the past two years for fifty-one different pieces of construction, aggregating in cost \$163,973.81; this added to the amount of the appropriations makes a total of \$3,222,378.81 for one hundred and thirty-six different pieces of work.

There is necessarily a considerable amount of office work done in connection with proposed construction at these various institutions that is never carried through and is not taken into account in the above figures. In addition to this, it is impossible for us to deny requests for counsel and advice from the various institutions, and the aggregate amount of time given during a biennial period to consultations, making of sketches and general assistance is very considerable.

Of these one hundred and thirty-six pieces of work referred to above, twenty-seven were of a value less than \$1,000; seventy-two between \$1,000 and \$12,500; sixteen between \$12,500 and \$20,000; twelve between \$20,000 and \$50,000, and nine over \$50,000.

The extremely large proportion of work of small cost, as indicated by the figures just given, together with work in connection with proposed construction never erected and the large amount of time consumed in advisory consultation, already referred to, make the average percentage of cost for our office work higher than would be the case otherwise.

Plate IX. Ice Plant (front), San Quentin State Prison.

Plate X. Ice Plant, San Quentin State Prison.

For the purpose of indicating in detail the cost of our work, a list of forty items fairly representing the total of one hundred and thirty-six, is given at the end of this report. The total cost of these forty pieces of construction as shown by our books is \$1,238,471, the expense of our office work \$51,378.40 or 4.14 per cent of the total, and the expense for inspection \$7,749.13 or 0.51 per cent of the total. Since some work still remains to be done in connection with a few items on the list referred to, the above percentages should be respectively 4.50 and 0.75 per cent.

Some conditions that have tended to keep maintenance cost up have been and are still being gradually removed. The office is now a better organization and is operated under a better system than at any time heretofore. The several branches of work are coordinated and a high degree of efficiency is obtained. Our quarters in the Capitol have been insufficient and quite unsatisfactory in other important particulars; this is to be remedied by our removal about January 1, 1915, to ample and satisfactory quarters in the Forum building.

The schedule of proper minimum charges of the American Institute of Architects, which schedule today governs the practice of all our best architects, makes 6 per cent of the total cost the architect's minimum compensation in any case, and where the work is of small cost, and in connection with the remodeling of existing buildings, 10 per cent and sometimes 15 per cent of the cost is paid; the institute's schedule also provides that the owner, in addition to this percentage payment, shall defray the expense (amounting to about 1 per cent of the total cost) involved in securing special expert service covering structural engineering and mechanical engineering, which latter includes power plant, heating, ventilating and electrical engineering (all of which items are included in the 4.50 per cent above mentioned), also the expense involved in the continuous service at the building site itself, of a clerk of works or superintendent of construction, which corresponds to our expense for inspection.

It appears, from this last statement, that the Department of Engineering is doing the work at a cost more than 2 per cent less than the minimum fee established by the American Institute of Architects; there is no reason, however, why the Department should be expected to do the work properly and keep the cost below the fees charged in private practice.

The state should have the best work in architecture as well as along all other lines. The Division of Architecture is securing this kind of work about as follows:

A full appreciation of the building needs of the various state institutions is secured by frequent consultation with the executive heads and boards of management and by frequent visits of the State Architect and his assistants to the institutions.

The designers in charge of the planning and designing of the buildings, from having been in the state's employ for a considerable length of time, have become specially expert as to the building needs of the state institutions and the best methods of meeting them.

An ample force of draftsmen, architectural, structural, mechanical and electrical, is employed, with the result that working drawings, large scale drawings and full size details, as the basis for bids and contract, are thoroughly complete; this is true also of the specifications which form a part of the basis for bids and contract; the specification writers keep in continuous touch with the market as to all building materials. Since our mechanical and electrical engineers, structural designers and specification writers, also our cost estimators, work in conjunction with our architectural men, all employees being under the continuous charge of the heads of the several departments, we are especially well situated to secure perfect and complete sets of working drawings and specifications with a minimum of lost motion.

Our drawings more clearly delineate all the details of construction than the drawings which the average architect provides, and on account of the clearness of our drawings and specifications, bidders are able to estimate more closely the cost of the work; the lower bids run very close to each other in practically every case.

The above conditions as to drawings and specifications, taken together with the continual presence at building sites of competent inspectors, make it possible for us, with the least friction and expense, to secure the completed buildings in accordance with the contract agreements. We are greatly assisted in securing this result on account of the services of our testing engineer, who cares for the analysis and testing of materials entering into the construction of buildings, where such analysis and test are necessary to eliminate doubt as to whether quality and combinations of materials agree with specification requirements.

## SAN FRANCISCO HARBOR FRONT.

The harbor front of the city of San Francisco is state property, and the administration of it is vested in a Board of State Harbor Commissioners.

The construction, maintenance and operation of all buildings, docks, slips, wharves, a belt railroad along the front, etc., is under the jurisdiction of the board, which reports directly to the Governor.

All engineering, including design, construction, etc., is by law vested in the Department of Engineering and one Assistant State Engineer and one engineering draughtsman are assigned to the Board.

During the last two years Mr. Jerome Newman has been in charge of all work in the harbor front, the details of which are set forth in his report, as follows:

**Report of work executed on San Francisco Harbor Front July 1, 1912, to June 30, 1914, under the direction of Jerome Newman, Assistant State Engineer, Engineer in charge.**

At the end of the last biennial period, June 30, 1912, four contracts had been awarded for the construction of five new piers numbered, respectively, piers 17, 26, 28, 30 and 32. At the time of my appointment, active work had been begun on pier 17 and the twin piers 30 and 32 only, the former being 24 per cent and the latter 4 per cent completed. All these piers have since been finished essentially as planned and placed in service, the only modification having been in the design of the outer portion of pier 17, by the substitution of cement grout as a filling between the wooden piles and the concrete cylinders enclosing them in place of sand as originally planned.

The layouts which had been tentatively adopted for the improvement of the northern portion of the water front from Lombard street to Fisherman's Wharf and of the southern portion between Mission and Harrison streets were revised and formally adopted and the preparation of plans in accordance therewith was carried on, but owing to unfavorable financial conditions and the impossibility of disposing of the balance of the bond issue, construction could not be commenced with vigor. A few contracts were let, but the general plan of improvement could not be taken up in earnest until the beginning of 1914; since that time, however, the work has been pressed and an energetic effort is being made to put the water front in condition to handle the expected large increase in traffic consequent upon the opening of the Panama Canal.

As the Engineering Division embraces several subdivisions, it will be necessary to report on the work of each separately, as follows:

1. Construction, seawall, piers and wharves.
2. Maintenance and repairs.
3. Belt Railroad.
4. Ferry slips and buildings.
5. Street work and maintenance.
6. Electrical Section.
7. Dredging.
8. Testing Section.

### 1. Construction.

*Seawall, sections 9A and 9B.* Section 9A of the seawall is 990 feet long and extends southerly from the end of section 8 near the foot of Mission street to the foot of Folsom street; section 9B is 780 feet long, extending from the southerly

Plate XIV. Pier 26, San Francisco Harbor Front.

end of section 9A, at the foot of Folsom street to the northerly end of section 9 at the foot of Harrison street.

Both these sections are of the same type and differ in several respects from sections 8 and 9. The crest of the rock wall is higher and is placed at the curb line of The Embarcadero, 60 feet back of the water front line, instead of 27 feet as in section 9, giving greater depth of water at the edge of the bulkhead, and, as the concrete retaining wall is located at the crest of the rock embankment, affording the additional advantage of a uniform foundation for the bulkhead pavement. This uniform foundation will prevent the unequal settlement which has been observed in bulkheads built on the type of section 9 in which the outer 27 feet of the pavement rests on the concrete slab and the inner 33 feet on an earth fill.

The concrete retaining wall is much smaller in section than those used in sections 8 and 9 and is carried down to 13 feet below city base instead of 30 feet as in the two latter sections, making it possible to deposit all concrete in the dry instead of placing some of it under water as was necessary in sections 8 and 9. The bottom rests on wooden piles cut off at low water and surrounded by rock, and consequently not liable to decay or attack by marine borers.

The deck is supported by reinforced concrete piles 16 inches square, driven through the rock embankment; in order to avoid shattering the tips, it was found necessary to shoe the piles.

On account of the mud bottom on which the rock wall rests, it was considered advisable to make provision for possible future settlement by constructing the deck of the bulkhead wharf of steel beams carrying a plank and asphalt pavement; the deck can later be raised if necessary, the steel concreted and the planking replaced by a concrete slab.

Section 9A is 76½ per cent completed at the present time, and it is expected that both sections will be finished by January 1, 1915. When completed there will be a continuous line of seawall from Mission street to the north line of Channel street extended and as stipulated in the China Basin lease the outer 100 feet of the thoroughfare along China Basin will be placed under control of the state.

*Piers and bulkhead wharves.* Before proceeding with the preparation of plans for new piers, the question of the proper class of construction to be employed was thoroughly discussed and it was decided that the use of creosoted piling in certain cases would be preferable to the exclusive use of reinforced concrete, which latter has been used, where deemed practicable. There were several reasons for making this decision, viz: the great depth of mud along the water front from the foot of Harrison street to the foot of Grant avenue, entailing excessive cost of construction in concrete on account of the depth and difficulty of foundations, the urgent necessity of being prepared for the opening of the Panama Canal in the very near future, the constant changes in vessels and freight-handling methods bringing with them the possible need of early reconstruction to meet new conditions, coupled with the great expense of such reconstruction in a concrete pier, and last, but not least, the uncertainty among engineers regarding the probable life of reinforced concrete structures in sea water. It may be remarked that the choice of creosoted pile construction in certain localities agrees with the recommendation to the Maritime Affairs Committee of the San Francisco Chamber of Commerce by a commission of engineers appointed by it for the purpose of examining conditions and reporting thereon.

Observations at the northern portion of the front disclosed the fact that there was a strong tidal current at this point, which might endanger wooden pile structures and it was decided to build the three most exposed piers of the seven contemplated for this section of concrete, to act as breakwaters and to deflect the current eastward away from the shore. For this reason piers 29, 35 and 39 have been designed as reinforced concrete piers, piers 29 and 39 as concrete cylinder piers, resting on wooden piles below the mud line, and pier 35 as a pile pier; and the completion of pier 39 has demonstrated that the object has been attained.

Wherever possible, shipping men were consulted on the most advantageous arrangement of piers, location and character of tracks, sizes of docks, width of slips, etc., and designs were prepared in accordance with their suggestions. All new piers are pro-

vided with at least one track and where width permits with two, one surface and one depressed, the latter being generally placed on the northerly side, and provision is made for the possible future installation of cranes for handling freight by building the substructure and shed columns heavy enough to carry them. Doors are of ample size, usually 22 feet high and 20 feet wide and are equipped with steel rolling shutters which possess the advantages of easy operation, durability and low maintenance cost.

Wherever necessary, the contract for a new pier has included the reconstruction of the adjacent bulkhead wharf either in timber or concrete, depending on circumstances. The wharf connecting with pier 49 is of creosoted piling, those connecting with piers 15, 30 and 41 are of reinforced concrete.

Creosoted pile fenders protected by untreated Oregon pine sheathing have been employed in place of the untreated fender lines heretofore used and wood block pavements in the driveways of wooden piers have been substituted for planking. A large percentage of the total cost of repairs is expended on fenders and planking and it is certain that even with the increased first cost, the above changes will result in materially decreased annual cost, the creosoted piling having ten to twelve times the life of untreated piles and the block pavement four to five times that of planking.

To add to the attractiveness of the front, the old ugly type of shed front was abandoned and the pier fronts south of Market street are to be built in modified mission style, those north of Market street being designed on the lines of the Chelsea piers of New York.

*Pier 39.* This pier is 140 feet wide, its length on the westerly side being 879 feet and on the easterly side 938 feet, the difference in the lengths of the sides being due to the inclination of the pier at an angle to the seawall. The substructure consists of reinforced concrete cylinders 3 feet and  $3\frac{1}{2}$  feet in diameter, carried down from ten to fourteen feet below the dredge line and supported on wooden piles. The deck construction is of the usual transverse girder, longitudinal beam and slab type with a center driveway and a railroad track on each side of the pier, the easterly one being flush and the westerly one depressed. The pavement is Ohio wood blocks in the driveway and asphalt on the remainder of the deck. The fenders are of the suspended type, the same as those used on the new piers at the south end.

In addition to the pier, the contract included the construction of two adjacent sections of reinforced concrete bulkhead wharf, 44 feet wide and extending back of the pier and 144 feet westerly and 175 feet easterly therefrom. The rock wall at this point, having been built in 1878, and being consequently thoroughly compacted without danger of further settlement, was repaired where necessary and concrete piles driven through it, supporting a reinforced concrete deck paved with asphalt. The retaining wall is 16 inches thick and is carried down to 9 feet below city base.

Plans for a two-story steel and concrete shed with a bulkhead building projecting to within 15 feet of the curb line have been prepared; this shed is arranged with offices, waiting rooms, baggage chutes, elevators, etc., for the accommodation of passengers, for which service the pier may ultimately be used. For the present it will be used for the grain sheds.

Pier 39 was completed May 7, 1914, and a contract was let for moving the grain shed from the bulkhead wharf nearby to serve as a temporary shed on this pier until the permanent structure is erected.

*Pier 46.* This pier is 800 feet long by 200 feet wide and is constructed of creosoted piling, carrying a timber deck with two surface tracks. The design is of the ordinary type and there are no features of special interest.

The pier shed is of timber with sliding wooden doors, 22 feet high and 20 feet wide and with a center driveway. The deck planking consists of a layer of Oregon pine with a wearing surface of cedar.

In connection with this contract considerable work has been done in placing the adjacent bulkhead wharf in good condition.

Pier 46 was 46 per cent completed on June 30, 1914, and is expected to be entirely finished about September 15.

*Pier 54.* This pier was built in 1910 on a rock ledge extending under a part of the pier and the northerly and southerly slips, and it was found necessary before the structure was completed and accepted to blast the rock on the northerly and

Plate XV—A. Piers 30 and 32, San Francisco Harbor Front.

B. Pier 26. Interior, San Francisco Harbor Front.

C. Piers 26, 28, 30, 32, San Francisco Harbor Front.

southerly sides to the dredge line, in order to afford sufficient depth to accommodate vessels berthing alongside. A contract for the blasting had been let in June, 1910, and this was carried on while the pier was building, a work attended with much difficulty and some danger to the outside row of cylinders supporting the pier. It was finally decided to leave a ledge 6 feet wide outside the north row of cylinders where the rock was hard and chisel out the rock beyond the ledge until a sufficient distance had been reached to render blasting safe; the entire area over which the rock was present was then blasted out to the dredge line.

On account of the ledge which was left on the north side, it was not possible to dock vessels with safety and an extension 10 feet wide was built along the entire length of this side, this extension being supported on reinforced concrete piles set on the rock ledge for the outer 441 feet and on creosoted piles driven into the mud for the inner 339 feet. The deck on the concrete pile section consists of reinforced girders and beams carrying a slab and that on the creosoted pile section is of timber covered with plank. The deck on both sections is securely bolted to the original structure and the entire area is paved with asphalt. The extension was completed on June 30, 1914.

*Pier 41.* This pier is 200 feet wide, its length on the westerly side being 881 feet and on the easterly side 1,081 feet. It is supported on creosoted piling, has a timber deck with two surface tracks, and is paved along the driveway in the center with bituminous concrete and on the sides in the cargo space with asphalt. The fender line consists of creosoted piles protected by untreated Oregon pine sheathing extending to below low water.

This pier is an open one and it is not intended to erect a shed on it. It is intended to be used for lumber, steel beams and all kinds of bulky cargo.

In connection with the pier there is to be constructed under the same contract a section of reinforced concrete bulkhead wharf back of the pier and 149 feet easterly therefrom; this is identical in design with the wharf adjoining pier 39.

Pier 41 was 21 per cent completed on June 30, 1914, and is expected to be finished about December 1, 1914.

*Pier 15.* This pier, which is to replace the old one at the same place, condemned on account of its dangerous condition, is 794 feet long and 90 feet wide. It is a creosoted-pile pier with timber deck having one surface track located near the center to serve the coal bunkers on the southerly side, with a pavement of cedar plank on the driveway under the coal bunkers and of bituminous concrete outside the bunkers. The fender line is constructed of creosoted piles with untreated Oregon pine sheathing.

The northerly half of the pier is to be built first and the coal bunkers moved temporarily to this portion when completed, after which the southerly half will be constructed and the bunkers then moved to their permanent location on this portion. There will be no shed, none being needed.

The contract for this pier includes the building of a section of reinforced concrete bulkhead wharf back of the pier and 101 feet northerly, having a width of 41 feet and supported on reinforced concrete piles driven through the old rock seawall. There is a concrete retaining wall at the inside, carried down to 13 feet below city base and resting on wooden piles also driven through the seawall. The deck is of the usual girder, beam and slab type and is paved with asphalt.

Pier 15 was 6 per cent completed on June 30, 1914, and will probably be finished about January 1, 1915.

*Pier 27.* An extension 12 feet wide was constructed along the entire northerly side of this pier for the purpose of carrying a surface track. This extension is supported on creosoted piles and has a planked timber deck. Under the same contract, extensive repairs were made to this pier and the adjacent bulkhead wharf, which will be described under "Maintenance and repairs." The extension to pier 27 was completed March 19, 1914.

*Pier 25.* An extension 14 feet wide was constructed along the entire southerly side of this pier to carry a surface track; this is similar in design to that used on pier 27. It was completed on April 30, 1914.

*Miscellaneous.* The outer 337 feet of Sixteenth street wharf was brought out to full width by building a 77-foot extension on the northerly side; this was completed February 6, 1913.

A creosoted pile bulkhead wharf 290 feet long with an average width of 110 feet was built in front of section 8 of the seawall and was completed January 2, 1913. This was designed for temporary use during the construction of the seawall south of Mission street.

A creosoted pile bulkhead wharf 411 feet long and 60 feet wide to accommodate government vessels and lumber schooners is in course of construction north of Fisherman's Lagoon and will be completed in one month.

*Projected work.* Plans have been prepared or are in course of preparation as follows:

New piers, numbered 16 and 18, to be located between Howard and Folsom streets; these plans are completed and contracts may be let as soon as possible.

Piers 35 and 37, located respectively at the foot of Montgomery street and the foot of Kearny street; these are 80 per cent completed.

Piers 22 and 24, located near the foot of Harrison street; these have just been begun.

Seawall extending from Jones street to Larkin street; instructions have been given to prepare these plans and in connection therewith to provide for the removal of Fisherman's Lagoon to the blocks north of Jefferson street, between Hyde and Larkin streets.

## 2. Maintenance and repairs.

The ordinary repairs to piers, bulkheads and ferry slips have been made by the state force, but some large jobs amounting to practical reconstruction of piers were let by contract. In order to determine the relative cost of small work by contract and by day's labor, a comparison was made for one month on the basis of actual work done, taking into account for the state force all pay roll and proper material charges and increase in wages since the contract system was abandoned as against prices paid for contract work in 1910-1911. The comparison showed a saving of 35 per cent, and this would justify the adoption of the present system if no other reason existed; it may, however, be accepted as a fact that work done by forces under the direct control of those who pay for it is of better quality than that done by contractors and the conclusion is warranted that the day's labor system now in use for small repairs results in better work at a lower cost than the contract system.

*Disintegration of concrete supports of five piers.* In order to ascertain whether repairs were necessary, piers 19, 21, 23, 25 all constructed in 1901, and pier 27 constructed in 1907, all of which are supported on cylinders of plain concrete deposited in water and carried only a few feet below the mud line, were examined by divers and their condition found to be as follows:

The 234 cylinders under pier 19 contain three piles each; of these cylinders, three had fallen, the disintegration of the concrete in 157 had exposed the piles and 74 were in good condition.

The 234 cylinders under pier 21 contain three piles each; of these cylinders, two had fallen down, the piles in four had been eaten off, leaving them hanging on the caps, the disintegration of the concrete in 166 had exposed the piles and 62 were in good condition.

The 234 cylinders under pier 23 also contain three piles each; of these cylinders, 15 had fallen down, the piles in two had been eaten off, the piles in 140 were exposed and 77 were in good condition.

The condition of the outer 60 feet of pier 25 having become dangerous some four years ago, repairs were made by driving a creosoted pile on each side of the cylinders. There were 274 three-pile cylinders under this pier, of which 18 had fallen down, the piles in twelve had been eaten off, and those in 135 were exposed, the concrete in 22 showed disintegration and 87 were in good condition.

Plate XVI—A. Pier 28, San Francisco Harbor Front.

B. Pier 28, Interior, San Francisco Harbor Front.

C. Pier 39, San Francisco Harbor Front.

Of the 400 one-pile cylinders under pier 27, 58 had disappeared, the piles in 49 had been eaten off, those in 40 cylinders had been exposed by the destruction of the concrete, which had also begun to crumble in 32 others without, however, exposing the piles, and 221 were in good condition.

The results of the diver's examination showed the necessity of making repairs to these five piers and instructions were given to do so. The repairs to piers 25 and 27 were included in the contracts for the spur track extensions previously described and on the completion of these contracts another was let for the repair of pier 19; this last was 12 per cent completed on June 30, 1914, and it is intended to begin work on the remaining two piers as soon as possible.

The repairs are made with creosoted piles which are driven under the timber caps of piers 19, 21, 23, and 25 and in the case of pier 27 carry sub-caps supporting the steel caps of the pier. The defective cylinders are to be loosened and laid on the bottom, care being taken to prevent damage to the piles during the lowering. These repairs will insure about fifteen years' further useful life of these structures, at the end of which time it will be cheaper to tear down and rebuild than to attempt to maintain them.

### 3. Belt railroad.

A large amount of work has been done on the Belt Railroad, both in the way of additional spurs serving piers and industries and siding and extensions. Mention has already been made of the fact that all new piers are provided with one or two tracks, those completed and under contract being as follows: Piers 46, 32, 30, 28, 26, 37, 39, and 41, two tracks each, and piers 15 and 17 one track each; of those projected, piers 16, 18, 29, 31, 33, and 35 are to have two tracks, while those to be numbered 24 and 22 are to be supplied with one. Spurs have also been constructed to piers 25 and 27, and it is intended to place one later on pier 13.

A decided improvement in operating conditions was effected by the building of that portion of the line crossing the foot of Market street and connecting the northern and southern divisions; this link is 3,900 feet long and extends from Folsom street to Broadway. Some difficulty was experienced in the construction of the section in front of the Ferry Building and extending north to Clay street; The Embarcadero at this point is a sand fill carried by a timber platform supported by piling cut off at low water level, and it was necessary for a distance of 390 feet, where the piles were too far apart to carry trains safely, to trench the street, drive the required additional piles and lay a new plank platform to retain the sand. The entire connection was completed and ready for operation on January 27, 1913.

The Belt Railroad is being further extended from the foot of Powell street, its former northerly terminus, by the construction of the line to the government transport docks at Fort Mason. This line begins at the corner of Powell and Jefferson streets, and runs westerly along Jefferson street to Van Ness avenue, turning thence to the corner of Beach and Laguna streets and connecting with the government tracks to the transport docks and warehouses and also with the tracks of the Panama-Pacific International Exposition. Between Taylor and Jones streets, where it runs along the southerly edge of Fisherman's Lagoon, and between Larkin street and Van Ness avenue where it crosses the cove east of Black Point, it is on trestle and under the government reservation at Fort Mason, in tunnel. The trestles are open deck, built in accordance with standard railroad practice, having creosoted pile bents and creosoted sway braces and girts; tower bents are spaced every 150 feet. The tunnel is 1,500 feet long, its easterly portal being situated 120 feet west of the westerly line of Van Ness avenue, and its westerly portal 245 feet east of the easterly line of Laguna street. It is concrete lined throughout with a clear width of 17 feet and a clear height above top of rail of 22 feet. At the westerly end from the portal to Laguna street there are concrete retaining walls about 250 feet long, having a height of 27 feet at the portal face and 4 feet at the easterly line of Laguna street; these walls were ordered built to save as much ground as possible for the use of the reservation.

The material encountered in the tunnel was a sandstone shale for the easterly 700 feet, clay in the middle 400 feet and sand in the westerly 400 feet. The easterly and middle portions were excavated by the ordinary heading and bench method, a center shaft being sunk to hasten the work, the westerly section in sand being taken out as an open cut and backfilled after the masonry was completed. The shaly rock from the easterly portion was used to make an embankment extending into the bay from Hyde street to Larkin street, and heavily riprapped along the northerly side and the westerly end to protect it from wash.

This extension which is 1.09 miles long was 47 per cent completed on June 30, 1914, and is expected to be ready for trains by November 1, 1914, in ample time to serve the Exposition.

A reinforced concrete engine house containing seven stalls was erected on seawall lot 8, bounded by Lombard and Sansome streets and The Embarcadero. This building is provided with a drop pit, machine shop, blacksmith shop and storeroom; the engine house proper and the machine shop are floored with wooden blocks on a concrete base, the storeroom with concrete and the blacksmith shop with cinders.

It is expected that this engine house will suffice for the needs of the Belt Railroad for several years and when additional stalls are required another engine house should be built on the southern division. This engine house was completed April 30, 1914.

The total length of line between the north side of Second street wharf, the present southerly terminus and Beach and Laguna streets, the proposed northerly terminus is 3.70 miles. A comprehensive plan has been worked out for the track system between these termini which contemplates 1.86 miles of single track, 0.64 miles of double track and 1.20 miles of three track road, the number of tracks being determined by local conditions of railroad yards and tracks serving industries at different points. The single track sections extend from the north side of Second street wharf to Berry street, from King to Townsend street, from Folsom street to Broadway and from Powell to Laguna street; the double track sections from Berry to King street, from Harrison to Folsom street, from Broadway to Green street, and from Battery to Francisco street, and the three track sections from Townsend to Harrison street, from Green to Battery street and from Francisco to Powell street.

To render possible the storage of cars during the season of heavy traffic, yards have been projected on seawall lots 20 and 18 at the south end and on lots 1, 2, A and B at the north end; these yards will assist materially in doing away with congestion of the main line and in assuring rapid delivery of cars to shippers and to the different railroad companies entering the city. Several of the tracks planned for these yards have already been laid.

#### 4. Ferry slips and buildings.

*Passenger ferry slips.* Plans for new passenger slips at the north and south ends of the ferry system have been prepared, those at the north end being designated A and B and those at the south end being numbered 7, 8, 9 and 10; of these, slips B, 8, 9 and 10 are to be entirely new and slips A and 7 are to be partially rebuilt to fit the enlarged system.

The dolphins are to be constructed of creosoted piles carrying a timber deck covered with a double layer of planking at the outer end and with a single layer paved with asphalt on the inner portion. While the general type of construction is similar to that used in the older slips, several improvements have been made, such as strengthening the aprons to permit the passage of loaded trucks weighing 20 tons and reinforcing the noses of the dolphins and the clusters at the outer ends of the aprons with the object of reducing the liability to damage at these points, the most vulnerable parts of the fender line. The older aprons were capable of carrying a 12-ton vehicle, but as loads have increased since the general adoption of the auto truck, shippers who desired to send heavy machinery, etc., across the bay were put to serious inconvenience and expense on account of the limited capacity of the aprons and to meet their wishes, the heavier aprons have been designed. The noses of the new dolphins are more heavily piled than other portions and are strongly

braced transversely by continuous lines of timbers fastened to the piles and extending entirely across the dolphin, these timbers being placed both above and below the deck and bearing against the ribbons of the spring line. The clusters contain 19 piles as against 9 formerly. It is expected that these changes will result in decreasing repairs, as the nose and cluster are more subject to damage by ferry boats than any other part of the spring line and consequently oftener in need of repairs.

The end dolphin on the southerly side of slip 10 is to be of larger size than any of the others, its average length, measured from the water front line, being 670 feet and its width at the outer end 120 feet; it is to carry a shed 110 feet wide by 430 feet long intended for express purposes. The berthing space of 650 feet on the southerly side of this dolphin makes this a particularly favorable location for small boats and launches and a space 60 feet wide outside the shed has been left for use of the business of these vessels. The end dolphin on the northerly side of slip B has a berthing space of 465 feet with a width at its outer end of 66 feet.

Foundations for upper deck aprons have been provided at all slips and contracts for these, wherever necessary, can be let after the completion of the slips.

Slip 8 was completed June 25, 1914, and contracts for slips 7, 9 and 10 will be let in the near future, in time to insure their being available for use before the opening of the Panama-Pacific International Exposition.

*Car ferry slips.* The present car ferries at the foot of Lombard street are to be torn out to make room for piers and two new ones are being built between the foot of Powell street and the foot of Taylor street. They are of creosoted piles carrying a timber deck planked with Oregon pine, which on the eastern dolphin is covered with a wearing surface of cedar to permit of teaming when this dolphin is used for berthing vessels. The construction follows the plan of the present car ferry slips in general but with steel aprons and wider dolphins supplied with more tracks, there being two of these on the easterly dolphin, four on the middle one and two on the westerly dolphin.

In connection with the contract for the car ferry slips, the adjacent bulkhead is being reconstructed to carry tracks, this work being carried out in timber on the same plan as the slips. The car ferry slips were 4 per cent completed June 30, 1914.

*Buildings.* Plans for buildings in the vicinity of the ferry slips are being prepared as follows:

Extension to the southerly end of the main Ferry Building to be used for baggage purposes.

Post office building to be located opposite the foot of Mission street with a connecting shed on the dolphin between slips 8 and 9.

Shed on the dolphin on the south side of slip 10 to be used for express purposes.

The Ferry Building extension is to be a one-story structure 140 feet wide by 126 feet deep, carrying out the arcade treatment of the first story front of the main building. It is to be of frame construction with plastered exterior, the latter being painted to match the stone of the Ferry Building. There is to be a light steel frame shelter at the southern end for teams handling baggage and a two-story steel frame and concrete structure behind the extension for the gangways for passengers to and from the upper and lower decks of ferryboats. The extension is to be supported by creosoted piles with a wooden floor, the rear gangways being carried on concrete piles with a concrete deck paved with asphalt.

The Ferry Building as originally designed included a wing at each end, which for lack of funds were not built. Ultimately, but probably not for some years, they will doubtless be added and will be of the same stone as the present structure. For this reason the one-story extension for baggage-room purposes now in progress being only temporary in character, is of frame and plaster construction.

The interior is to be arranged for use by the Southern Pacific Company and the Western Pacific Railway. In connection with the erection of this addition, a part of the present baggage room at the southern end of the Ferry Building is to be remodeled to provide waiting room space for the Western Pacific.

The post office is to be 167 feet wide by 125 feet deep on the first floor with a second story extending the full width of the building and 58 feet deep. The construction is to be steel frame with brick walls, carried by concrete piles and a concrete deck paved with asphalt. The first floor is to be divided into workrooms for handling mail with the necessary space for the public, and the second floor is to contain offices for the use of the office force. In addition there will be four mezzanine floors provided with lockers, etc., for the working force.

Connected with the main post office, there will be a timber shed containing an area of approximately 16,000 square feet and divided into workrooms and storage spaces; this shed is to be built on the dolphin between ferry slips 8 and 9. The two-story steel and concrete gangway in the rear of the Ferry Building extension is to be continued to the southerly end of the post office and from this point a one-story structure is to be built over the passageway to the extreme southerly ferry slip.

The shed intended for Wells, Fargo & Co. is to be 110 feet wide by 430 feet deep on the first floor with a second story 202 feet deep across the entire width of the building; the construction is to be wood frame with plastered exterior. The lower floor is to be used for general office and workroom purposes, the second floor being intended for the clerical force and for sorting and distributing express matter.

#### 5. Street work and maintenance.

Besides the ordinary repair work done on The Embarcadero by Harbor Commission forces, considerable new work has been done by contract during the last two years in connection with improvements ordered by the San Francisco board of supervisors on streets bounding property belonging to the state. The different contracts of this character which have been awarded are as follows:

Paving the easterly half of Beale street between Bryant street and The Embarcadero, completed in April, 1913.

Sewering Bryant street between Beale and Main streets, completed in May, 1913.

Paving the southerly half of Brannan street from First street to The Embarcadero, completed in June, 1913.

Sewering Steuart street between Folsom and Harrison streets, completed in July, 1913.

Sewering and paving the southerly half of Bryant street between Main and Spear streets and the easterly half of Spear street from The Embarcadero to near Harrison street; this has not yet been completed.

In addition to those enumerated above, a contract has been let for sewerage and paving The Embarcadero from pier 34 to pier 26, which was about 2 per cent completed on June 30, 1914, and it is intended to extend this pavement northerly as soon as feasible. Contracts will also be awarded for sewerage and paving Fremont street from The Embarcadero to Brannan street, and Main street from The Embarcadero to Bryant street; the property fronting on both sides of these streets is under control of the state and plans and specifications will be prepared in this office and the work done under our direction.

On account of the increasing traffic along the water front, especially at the southerly end, it is highly desirable, in order to avoid congestion, that all streets leading into The Embarcadero be improved and the work enumerated above has been of material benefit in this respect.

#### 6. Electrical division.

The work of the electrical department during the past two years has been varied and extensive, numerous improvements in the lighting of piers and ferry slips having been effected and considerable progress made in placing wires underground.

The electric lighting system along The Embarcadero has been extended from pier 34 northerly to Harrison street and from pier 11 northerly to pier 27 by the installation of 39 additional electroliers equipped with 250-watt and 400-watt tungsten lamps. Conduits, wires and post holes are being placed in sections 9A and 9B of the seawall

Plate XVII—A. Belt Line Railroad Tunnel, West Portal, San Francisco Harbor Front.

B. Belt Line Railroad Tunnel, East Portal, San Francisco Harbor Front.

C. Belt Line Railroad Roundhouse, San Francisco Harbor Front.

and bulkhead wharf now under construction, and when these are completed there will be a continuous system of high efficiency electroliers, 110 in all, from Channel street northerly to Lombard street.

The problem of proper pier illumination has been the subject of study with the purpose of obtaining maximum efficiency with minimum cost. As a result of data obtained from trial installations, the large wattage Mazda lamp was adopted and this is replacing the arc lights formerly used; all but five of the piers have been equipped with the modern lamps and the changes on these piers will be made in a short time. The improvement in lighting due to these changes, with its accompanying economy, has met with the hearty approval of shipping men.

An underground conduit system for Harbor Commission wires has been planned from Channel street to Lombard street; of this, the section from the Channel to Harrison street has been completed. Conduits are being placed in sections 9A and 9B of the new seawall and the section from the Ferry Building to Lombard street is about 85 per cent finished. A manhole is to be built opposite each pier entrance from which conduits and service wires are to be led into the sheds.

Notice has been served on electric public service corporations to place their wires underground and this is gradually being done, a separate system of conduits being laid for these wires. All poles and overhead wires, with the exception of those owned by the United Railroads, have already been removed from the Ferry Building north to Chestnut street. All private service wires to piers or other state property are to be run into Harbor Commission manholes; the conduits and wires extending from the latter are owned by the Harbor Commission, thus minimizing inconvenience and delay when the contract for furnishing electricity passes from one company to another.

Five new fire boxes numbered from 934 to 938, inclusive, have been installed on The Embarcadero between Channel and Harrison streets and have been connected with the fire alarm system of the city.

Precautions have been taken to protect the outer ends of exposed structures by installing fog bells and beacons, bells having been placed on piers 46, 32, 26, and 17, all connected with testing apparatus in the Ferry Building to enable the operator to be certain that they are ringing properly and beacons having been established on piers 46 and 39. In addition, new beacons of high power have been installed, one on the main ferry dolphin and another at the top of the tower and all pier head lights along the water front have been replaced by others of greater candle power. A Douglas fog signal of 25,000 candle power has been placed on the main ferry dolphin and a second is to be furnished for pier 39. Safety lights of large candle power have also been installed at every ferry apron and have proved of great benefit during rush hours.

A remote control system has been introduced whereby the street lights from the Ferry Building north to Chestnut street are operated from the main switchboard in the Ferry Building and this will eventually be enlarged to include all Harbor Commission lights from Channel street to Fisherman's wharf.

The time service in the building had become the cause of much complaint on account of the unreliability of the tower clock and the various electric clocks in the offices and waiting rooms. The department investigated the subject carefully, collecting data from terminals in other cities and adopted a modern half-minute jump electric clock system, controlled by a master clock; this system is now being installed. At the same time the Howard pendulum movement in the tower is being replaced by an electric movement designed by this department and controlled by the master clock operating the secondary clocks in the building; this movement was successfully tested for several months under actual working conditions before being installed.

## 7. Tugs and dredges.

The dredging equipment has been kept busy, not only in maintaining the necessary depth at the older piers, but also in excavating at the new structures wherever necessary before and after completion.

The smaller dredger, in addition to its ordinary work, spent considerable time in the troublesome task of taking out the rock blasted on the north side of pier 54 and the large machine was engaged at different times in pulling pile snags and dredging for sections 9A and 9B of the seawall.

The floating equipment has been kept in good condition in accordance with the requirements of the Federal Board of Inspectors; the expense of maintaining and repairing it has been quite heavy on account of its age and may be expected to increase as it grows older. Oil burners have been installed in both tugs and a considerable saving in operating cost has been effected by the use of liquid fuel in place of coal.

#### 8. Testing division.

This department has tested, both chemically and physically, all cement used on the work and has also passed on all rock, gravel and sand furnished by contractor for use in concrete; numerous tests have also been made on roofing felts, asphalt, paints, etc., furnished by manufacturers and intended for our work.

A series of long time tests has been begun to determine, if possible the action of sea water on local cements and it is hoped to add something of value to our knowledge on this subject.

Authority has been granted for the purchase of an Olsen Universal testing machine of 150,000 pounds capacity and of an Olsen cold bending machine and these will be installed in the near future. This will enable us, instead of employing others to do our work, to make the necessary tests on all reinforcing and structural steel, concrete, brick, metals, wood, etc., in our laboratory; added to this advantage there will be a saving in the cost of this service, as the machine will pay for itself in doing the work already planned.

### PURCHASING OFFICE.

In the opening chapter of this report it is suggested that the purchasing agent of the Department of Engineering should be a statutory office. The importance of this office can scarcely be overestimated, to emphasize which the following incident is cited:

Before the Board of Control had perfected its present organization it received for audit a claim for two carloads of lumber for a state institution for which \$35 per thousand feet was charged. The bill was referred to the purchasing agent of the Department for information as to the reasonableness of the charge. The agent quoted a price for the same grade of lumber at less than \$20 a thousand feet. The claim was disallowed.

Since the last biennial report, the office has been in charge of Mr. H. A. French, whose report here follows:

#### REPORT OF PURCHASING OFFICE.

By H. A. FRENCH, Purchasing Agent.

By the introduction of business methods into the purchasing office, the state, without lowering the standard of quality, is now paying less for the materials that enter into the construction and repair of its buildings, roads and river work than is paid by any firm, corporation or individual, purchasing similar quantities. It also has made the business of the State Department of Engineering more attractive to dealers, whereas a few years ago it probably was the least sought after by the general dealer.

The change that has been brought about in competing for the Department's business is shown by the increased number of bidders. Four years ago the only record of prospective bidders in the Department was a list required by law to be kept of

those firms which had made written application to be placed upon the bidding list. This list was so little known or appreciated that it numbered less than a hundred firms. It then appeared to be the policy of the Department to discourage rather than to encourage competition, for no attempt was made to increase this list beyond those firms voluntarily making the required written application, and firms making such application were required to renew their application each year to insure retention upon the bidding roll.

The present purchasing office record contains a list of 235 different segregations of classes of materials and the aggregate number of names of firms under these various segregations who regularly receive requests for proposals and that participate regularly in the bidding totals 1874. Additions to this number are continuously being made.

A policy of full and free access to all records relating to building construction has been adopted and carried out. The records of the Department previous to four years ago so far as they relate to orders for materials are so meagre as to be practically valueless. Under the present system all bids, correspondence, original requisitions, recommendations and memoranda in any way relating to the purchase are attached to the Department's copy of each and every order and all bidders are not only given free access to the same, but are encouraged in the desire and assisted in every way to examine the records of the orders in which they may be interested. To so great an extent is this policy appreciated and so eager are the dealers of the State for a share of the Department's business that many firms make a regular practice of having their representatives go over the bids in cases where they were not the successful bidder, for the purpose of arriving at a basis upon which they may again bid with better chance for success. The wisdom of this policy has been shown by a constantly broadening distribution of the Department's business and consistently increasing list of bidding firms.

The low prices which the department obtains in its purchases is very largely due to the promptness of its payments and the absolute insurance of payment which accompanies each and every order. By cooperation in the pre-audit policy of the State Board of Control, in full spirit as well as in letter, an order from the State Department of Engineering stands on a par with a certified check in assurance of payment. No order is placed until an unexpended balance sufficient to meet the obligation of the order can be shown in the appropriation or fund from which payment is to be made, and on the books of the Department's auditor the amount covered by the order is set aside and can be used for no other purpose than the payment of the obligation incurred.

In promptness of payment no concern in the state, doing a similar amount of business, equals the Department's record. A copy of each order is sent to each representative of the Department to whom delivery is to be made, and upon this copy a return is made to the Purchasing Department upon delivery. Upon the receipt of this return, a report of full compliance with the terms of the order, full payment is made. This puts the business of the Department upon a cash basis, increases its attractiveness to the dealer and reaps the reward to the state of closer bidding.

A very considerable saving has been made for the state by the Department by the policy of dealing direct with manufacturers upon the basis of the most favored customer rule. It is held that wherever a manufacturer is willing to carry the Department's account there is no good reason why it should not sell to the state at as low a figure as to any customer. This is in opposition to the policy of protecting the jobber adopted by many manufacturers, a policy regarded as necessary with relation to many classes of business, but is held by the Department that the state's business is in a class by itself for the reason that the state does not enter into competition with the jobber or the retailer in the resale of the materials which it purchases, and for the further reason that the officials of the Department are not buying for their personal use, but on the contrary merely are acting as agents in a business concern in which all citizens of the state are equal partners. The Department furthermore holds that no partner in this big business concern has the right to

charge his fellow partners an excessive price for the materials which he happens to furnish for the common use and benefit of all, and that any price based upon protection to any individual concern is an excessive price. It also holds that, on account of the character of the state's business as to the absence of risk and the reduction of the selling cost to the lowest possible terms, the manufacturer can afford to sell the state at as low a price as to any other customer, regardless of the quantity purchased. It is gratifying to note that a constantly increasing number of manufacturers agree with the soundness of this claim, with the result that in the case of many articles purchased by the Department competition no longer is confined to the portion of the manufacturer's 10 per cent protection which the various individual jobbers are willing to accept.

The purchasing office, although constantly handling an increasing quantity of business, has been administered with due regard to economy. The office since the beginning of July, 1913, and up to November 30, 1914, handled a total of 8,493 orders, or an average of 21 for each working day. In the eleven months of the year 1914 it handled 6,424 orders, or an increase from a little less than 15 orders a day in the last half of 1913 to nearly 24 orders for each working day throughout the year 1914. The total amount of the business handled amounts to something over a million dollars annually. The operating cost of the purchasing office is approximately \$600 a month. Based upon an annual business of one million dollars, the purchasing cost is a little less than eight tenths of 1 per cent.

## SACRAMENTO RIVER PROBLEMS.

Long ages ago, as measured by man's brief units of time, but at a comparatively recent period in the geologic history of California, probably in the later centuries of the glacial period, lapping over from the Pleistocene age to the early part of the Quaternary, the Great Valley of California, extending from the north end of the Sacramento at or near Iron Canyon to the south extremity of San Joaquin Valley at Tejon, was the site of a vast fresh water lake. The word "vast" in this connection is used correctly, as the area of this body of water, more than 17,000 square miles, was equal to that of Lakes Erie and Ontario, combined.

Whether the lake was drained by a sudden seismic cataclysm, or by the gradual wearing down of its outlet to the ocean through a pass in the westward wall between Mount Diablo and Mount Tamalpais, is not clearly revealed, but the latter seems most likely.

Much of the floor of the lake was below sea level, and when the barrier was broken through allowing the waters of the Pacific Ocean to enter the lower portions it became a great bay or sea with arms extending north and south.

By the continual, if slow, accumulation of detritus washed down from the surrounding mountains, the water was driven farther and farther toward the Golden Gate, and the present floor of the two great valleys—the Sacramento and the San Joaquin—was formed by those fluviatile deposits from the highlands.

This great inland sea which stretched along the foot of the Sierra has finally become but a remnant—Suisun Bay, lying just inside the gateway which is now called Carquinez Straits.

The area of Suisun Bay is about 50 square miles at ordinary stages. Contiguous to it originally were 100 square miles of marsh lands covered daily by the tide.

In the deltas of the Sacramento and San Joaquin rivers are more than 500 square miles of land with an elevation of less than ten feet above low tide. The range from low to high tide is about six feet at low stages of the rivers.

The principal islands forming the deltas of the two rivers named are as follows:

TABLE 2.

<i>Sacramento River Delta.</i>	
Merritt .....	4,200 acres
Sutter .....	2,500 acres
Ryer .....	11,800 acres
Grand .....	17,100 acres
Andrus .....	7,600 acres
Brannan .....	7,000 acres
Sherman .....	14,000 acres
Tyler .....	8,664 acres
Twitchell .....	3,500 acres
<i>San Joaquin River Delta.</i>	
Union .....	33,000 acres
Roberts .....	48,000 acres
Rough and Ready .....	1,600 acres
Lower Jones Tract .....	5,739 acres
Upper Jones Tract .....	6,280 acres
Victoria .....	6,900 acres
Woodwards .....	2,245 acres
Bacon .....	6,700 acres
Unnamed .....	1,400 acres
Unnamed .....	4,100 acres
Unnamed .....	3,100 acres
Vandeville .....	5,700 acres
Frank Tract .....	3,100 acres
Bethel Tract .....	3,780 acres
Bradford Tract .....	2,120 acres
Webb Tract .....	5,580 acres
Jersey .....	4,000 acres
Venice .....	3,875 acres
Bouldin .....	6,240 acres
Staten .....	9,300 acres

These islands were all formed by the gradual deposition of fine material brought down from the mountains by the annual floods of the rivers. By the action peculiar to sediment-bearing streams, the banks were built up higher than the surface of the land some distance away, and nearly all of these islands have that characteristic. Being surrounded on all sides by the streams that built them, the borders of the islands forming the banks of the streams are higher than the land at the interior, so that they may be correctly described as being "saucer shaped." The rims of these bowl-like islands were sometimes raised well above tide level, as at the upper end of Grand Island, where the bank was about 14 feet above low tide; and at the head of Roberts Island on the San Joaquin the level of the bank was 18 feet above datum. The lowest point on Grand Island was more than ten feet below low tide and 25 feet or more lower than the rim at the upper end of the island.

Before mining in the mountains had sent untold millions of cubic yards of detritus down the rivers, and before levees had been constructed along their banks in attempts to keep the water off the adjoin-

ing land, the waters of the rivers were free to spread over the floor of the valley whenever they were swollen to a volume larger than the prism between the banks.

As stated above, the banks of silt-bearing streams, are higher than the land at a distance. This condition produces troughs or basins between the rivers and the rising ground of the foothills. The fall from the top of the river bank is sometimes as great as ten feet in a thousand for short distances.

Prior to the commencement of farming on the low lands and the building of protection levees, the high waters ran over the banks, filling the basins to the flood level of the stream and obliterating all trace of the channel, excepting as the banks were marked by the growth of trees.

During the flood of 1853 the conditions are described as presenting to view a "sea of water" from Sutter's Fort (in Sacramento City) westward to where Davisville now is, and southward to Stockton, the water being three feet deep over the banks of the river.

The condition that caused more than one million acres of land to be inundated by the waters of Sacramento River, and as much more by the San Joaquin and its tributaries, was simply the inadequate size of the channels.

Hydraulic mining began to send debris down very shortly after Marshall's discovery of gold in 1848, and naturally great quantities of it were arrested in the channels where the slight gradients reduce the velocity of the water.

Very soon after the miners began washing the hillsides into the rivers, farmers were attracted to the rich lands lying partly submerged on the islands of the river deltas, and began in 1852 or 1853 to build levees to keep the water off the land. The first attempts were at the upper end of Grand Island, where small levees were built to keep off the flood waters from the river. These were extended from time to time along the banks of Old River and Steamboat Slough, until finally the entire island was encircled, not, however, without suffering breaks at different times. Of late years the levees have been so strengthened that they withstood the floods of 1907 and 1909, while the nearby islands were flooded.

The settlement of other islands followed; more levees were built and the river more or less successfully diked off from spreading over the lands. The result of all these changes, filling the river beds with debris and narrowing the channels with encroaching levees, has been to raise the water plane all along the course of the streams.

The Commissioner of Public Works estimated in 1894 that the Sacramento River from the mouth of the Feather to Suisun Bay had been reduced in cross-sectional area one third. Low water stages at Sacra-

mento were then reported to be five to seven feet higher than in 1849.

Prior to the influx of mining debris the influence of tides in Suisun Bay was felt in Sacramento River for several miles above the city of Sacramento, but with the rise of the bed of the river the limit of tidal action gradually receded until for many years no pulsations could be detected in the river above Haycock Shoals, 10 miles below Sacramento.

The depletion through the agency of the annual storms of the stores of mining detritus in the gulches and canyons of the hills coupled with the cooperative efforts of state and nation in works to arrest the flow of debris down the Yuba River have affected the regimen of the main river to such an extent that for several years the water plane has been slowly falling.

Tidal pulsations were reported in the river at Sacramento City in 1902. They became quite pronounced in 1910 and have increased in height until in 1913 there was a daily fluctuation of more than 20 inches recorded by the river gauge of the U. S Weather Bureau. Owing to an unusually large summer flow in the river this year the tidal action is much less marked.

In its original condition the river was not able to carry the flood waters, as was shown in 1853 and 1862. Although the latter date was twelve years after hydraulic mining had commenced, the fact that low water registered 0 on gauge as late as 1856, and in 1861 it was only 1.5 feet is taken to indicate that not much filling had occurred up to that time, and yet, as before stated, the water ran over the banks all along its course, converting the valley into a sea from ten to twenty miles wide.

In attempting to devise any scheme for relieving the situation as it exists in the great valley of California, it is found that the interests of navigation, drainage, flood control, and irrigation are so intimately connected that one can not be discussed without considering the others; and they seem to pair off in antagonisms, although so interdependent. Large reservoirs to intercept the flood are advocated, and could undoubtedly be made to greatly lessen the dangers of the flood waters, but to construct and maintain them without regard to their use for irrigation would not be thought of. Yet, if they are to be useful for the latter purpose, they must be filled with the first water that comes in sufficient quantity, else they may not be filled at all. If they are filled early, then when the flood arrives their capacity to absorb the flood flow is gone. So the one interest is opposed to the other.

Navigation requires a small channel in order to husband the water into a narrow space when the stream is low; flood protection demands a waterway of ample dimensions. Elaborate schemes have been worked out to reconstruct the main channels of the rivers so as to carry ordinary high stages, with overflow structures to take off the surplus

into auxiliary channels, confining it between embankments so as not to flood the lands,—all of these by-passes to converge into the one channel entering tide water.

Another scheme that has been proposed is to dredge the detritus from the river channels, using the material dredged to strengthen the levees on the banks. In the case of the Sacramento River, it has been estimated that the channel from Feather River to Suisun Bay has filled from six to fifteen feet and that from 80,000,000 to 120,000,000 cubic yards of detritus are lodged there. Let all of this be taken out and still the channel will not carry ordinary floods, much less the extraordinary. The river from the vicinity of Colusa to the mouth of the Feather has channel capacity to carry within its banks only about 30,000 second-feet, yet the records show that at Iron Canyon, 60 miles above Colusa, there were, February 3, 1909, 254,000 second-feet flowing. The stretch from Stony Creek, where it has the first opportunity to overflow, to Colusa, the gradient of the river, as determined from the slope of the low water surface, is 1.29 feet per mile, and for the stretch of small channel way, from Colusa to Feather River, the fall is only 0.34 feet per mile, so it can readily be seen what extensive changes are necessary to be made in that stretch to make the river carry all the water that Iron Canyon sometimes delivers.

Engineers studying the problems long ago agreed that whatever may ultimately be done for the solution of the several problems, it will all fail of giving protection to the islands of the Sacramento delta unless extensive channel enlargement and rectification be done at the confluence of Sacramento and San Joaquin rivers.

All of the drainage of the Sacramento must enter into the bay through a narrow pass. Just above Rio Vista, where the overflow from up the river coming down through the Yolo Basin reenters the Sacramento through Cache Slough, the river was formerly 2,600 feet in width. This has been reduced to about 1,800 feet by means of jetties. A few miles below this the channel is only 700 feet between banks. When a flood wave is rolling down the river it must mount higher and higher as the channel narrows, and when it meets the incoming tide, five or six feet high, forming as it were, a wall of water, it must ride on top of this tidal dam, with disastrous results to the shore embankments. It therefore becomes imperative that this constriction must be removed as preliminary to any scheme for river improvement above. This is now being accomplished as will appear herein, later.

The course of a flood in the Sacramento Valley may be stated as described in a former report of this Department, as follows:

The river enters the valley at Iron Canyon, carrying an observed maximum of more than 276,000 second-feet. The channel, of varying capacities and tortuous course, traverses the length of the valley the first sixty miles in the trough, thence occupying a ridge from which the land slopes either way to lower land on both sides. After running for sixty miles the stream is augmented by Stony Creek, from the west. Thence the channel, even in ordinary floods, begins to spill its surplus into the Colusa Basin; the water in this basin being constantly added to by overflows at intervals nearly the whole length of the river to Knight's Landing. Some is spilled along the upper reaches over the east bank and is picked up by Chico Creek, Angel Slough, and other channels, led into Butte Basin, thence into Sutter Basin and reenters the river at the lower end of the latter. When the flood wave has passed and the water level in the river lowers, Colusa Basin begins to return its waters to the river through Sycamore Slough near Knight's Landing. From Stony Creek to Feather River, a distance of 117 miles, the Sacramento has no tributaries, but sometimes, as in 1907 and again in 1909, when Butte Basin is already full, Feather River breaks over its banks 10 or 15 miles below Oroville, and the escaping water, running across the plains north of Marysville Buttes, enters Butte Basin, swelling the volume already there until the Sacramento River levees near Colusa are overtopped, engorges the river and adds to the outflow toward the west into Colusa Basin. Feather River, which also occupies high land, receives Yuba and Bear rivers on the east, overtops its banks and flows into Sutter Basin on the west, swelling the volume already received from Butte Basin.

The Sacramento having parted with its surplus in the upper reaches would now be able to keep within its banks were it not for the return of those last waters through Sutter Basin and the addition of the waters of the eastside tributaries just named.

Being swollen by these accessions the water now begins to flow out over the west bank in a broad sheet, the water running to lower land in Yolo Basin. Arriving at Sacramento city, the river is again reinforced by the American River. This stream, when gorged, flows over its banks to the north, filling American Basin, which already has received considerable quantities of water from the Sacramento River and the foothill drainage. Below Sacramento the river would, except for levees, overflow both banks all the way to Rio Vista, that to the west, running into Yolo Basin, and that on the east flowing towards Stockton until intercepted by the Mokelumne, by which stream it would be conducted into the San Joaquin. Near Rio Vista the waters that were discharged into Yolo Basin are returned to the river through Cache Slough, the quantity here entering having been largely increased by the hill drainage from the west of the basin.

Since records of stream flow have been kept the greatest floods visiting the Sacramento Valley occurred in March, 1907, and January, 1909.

Prior to those floods, one occurred in February, 1904, but at that time gauges had not been established on all of the streams, and upon those that were metered with the exception of Sacramento River at Red Bluff, the flow was far less than that registered in the two years named.

The following table, compiled from the records of stream flow is presented to show the comparison of floods, occurring in the years above named:

TABLE 3.

Comparison of the flood flow into Sacramento Valley for March, 1907, and January, 1909.

Streams	Flow at crest, cubic feet per second			Greatest daily mean flow—second-feet.		Greatest 4-day mean—second-feet	
	Mar., 1907	Jan., 1909	Maximum flow	Mar., 1907	Jan., 1909	Mar., 1907	Jan., 1909
Sacramento .....	204,000	205,000	254,000	187,000	137,000	152,000	129,000
Feather .....	187,000	137,000	187,000	187,000	137,000	135,900	115,200
Yuba .....	100,000	111,000	125,000	100,000	111,000	75,200	79,500
Bear .....	25,800	29,500	29,600	25,800	25,300	16,300	17,400
American .....	219,000	98,000	2125,000	105,000	98,000	83,400	77,900
Stony Creek .....	26,600	22,100	39,700	26,500	22,100	16,700	16,800
Cache Creek .....	20,300	20,800	20,800	19,200	20,100	13,400	11,900
Putah Creek .....	37,000	28,800	37,000	30,000	28,800	16,100	18,300
Unmetered .....	120,000	105,000	120,000	120,000	105,000	76,000	76,000
Total flow into valley.....	839,700	757,300	-----	800,500	684,300	585,000	542,000

The maximum "peak" of the flood in the Yuba River in March, 1907, when the debris barriers erected by the Debris Commission were swept away, has been estimated to have been 125,000 second-feet.

The flood on the American carried away the gauge and it is believed that the crest flow reached the maximum. Adding the 31,000 second-feet thus found to the recorded crest flow stated in column two of the table gives a total of 870,700 second-feet as being the probable quantity of water entering the valley on March 19, 1907.

In making investigations for the purpose of fixing a channel capacity to carry maximum floods, high water marks in the American River were pointed out by people who were present at the time of the flood in 1862, and from the data thus obtained it is estimated that American River contributed 185,000 to 200,000 second-feet of water to that memorable flood.

In column 4 of the table, the maximum flow stated for Sacramento River occurred on February 3, and that for Stony Creek, February 2, 1907.

Had all of the maxima stated in the table occurred at one time the aggregate flood would have exceeded 938,000 second-feet.

Few people realize that the Sacramento River is the fourth river of the United States in magnitude of flood flow, being larger in volume than the Missouri, Arkansas or Red rivers; larger than the Mississippi above the confluence of the Missouri and nearly equal to both the latter below their junction.

The three rivers affording a larger flood flow than the Sacramento are the Columbia, Ohio, and the Mississippi below the Ohio.

A comparison of the flood volumes of the principal rivers of the United States appears in the following table:

TABLE 4.  
Comparison of flood discharge of rivers in the United States.

Stream	Maximum flood discharge, second-ft.	Drainage area, square miles	Run-off, second-feet per square mile
Missouri .....	546,000	527,000	1.03
Mississippi above Missouri.....	366,000	165,000	2.33
Ohio .....	1,233,000	201,700	6.11
Mississippi (Vicksburg) .....	1,777,000	1,100,000	1.61
Columbia .....	1,390,000	237,000	5.86
Sacramento .....	840,000	24,000	35.00

A striking feature of the above table is the large run-off per square mile of the Sacramento drainage as compared with the others, which emphasizes the rugged character of the area drained by it.

Contemplation of the enormous floods as expressed in the foregoing figures, with knowledge of the limited carrying capacity of the natural channels, leads all who are conversant with the facts to the same conclusion, viz:

That to contract the waterways with levees and at the same time to attempt to prevent inundation of the basins at the side, must be futile.

In discussions of this subject by this Department in former reports, it was said:

All along both banks of the streams, levees have been constructed in attempts to keep the water from overflowing the adjacent lands; but no extensive flood has ever yet occurred that these levees were not somewhere breached, entailing great loss to the lands and crops inundated. Millions of dollars have been spent in futile efforts at protection and other millions lost because of their failure.

The first thing that strikes the notice of even a layman in examining the river is the glaring fact that the levees are too close to the banks, almost everywhere. It is less than a thousand feet from the wharves of Sacramento city to the levee on the opposite side and thirty feet height measured on the gauge endangers them. The maximum amount of water entering the valley above Sacramento city on March 19, 1907, has been estimated at more than 600,000 second-feet. Think of carrying that amount between banks 1,000 feet apart. With the present channel capacity, it would have to move at a velocity of sixteen feet per second, or if it were possible to restrict the velocity to ten feet per second, it would require the levees to be raised about twenty feet higher, neither of which conditions could possibly be attained.

The problems of the maintenance of navigation, protection from floods and the drainage and irrigation of land have been studied by able engineers, and good, bad and indifferent solutions offered; but the first requisite is a unification of purpose and harmony of effort among the various and varied interests involved. That having been attained, methods may quickly be determined upon and carried out. But to give it the wonderful development it can and should have, all interests must unitedly strive for and accomplish restoration of navigable conditions, protection from flood disaster, and reclamation by drainage and irrigation where these improvements are required.

From the data of surveys, gauge readings and information furnished by the United States Geological Survey, and a study and observation of the Sacramento

River, it is very evident that in a general comprehensive scheme of improvement for flood conditions of the river we must open wide the mouth of the stream, make cuts to obviate the bad sharp turns below Rio Vista, then continue up the river, cutting out all bad bends. We should begin at the mouth of the river rather than from any midway or other point and pursue the work up stream. If the stream were straightened out above Rio Vista to Red Bluff then the waters would rush down and pile up in the lower reaches of the river, endangering vast tracts of reclaimed lands. Probably the most important part of a general scheme for flood control is the systematization of the location and construction of new levees and the proper replacing of the old ones. The levees are now perched upon the bank ridge so close to the water line that a few feet of erosion endangers not only the levees, but perhaps valuable crops on thousands of acres of land. There are so many diversified opinions and interests involved that it is a difficult matter to get one or several landowners to begin the work upon a proper basis when his or their neighbors entirely disregard the plan. This manifestly is wrong and some central authority should have power to compel the landowners to levee their lands in a way to protect the interests of the whole people affected by the reclamation.

This authority must have powers that command the whole levee system. Until we adopt a plan of this nature, a recurrence of the disastrous breaks caused by flood waters will continue, and relief can not be expected. For flood relief there must be sufficient cross-sectional area to carry away the highest water, and near the mouth of the river there must be provided such area way between levees that when the flood waters happen to meet the high tide the river waters may pass over the crest of the tide.

The foregoing suggestion from the Department of Engineering to provide more capacious channelway for the floods and to place the matter under state control was not a new proposition. In the report of John A. Brewster, State Surveyor General, in 1856, he described the conditions and offered a plan for flood control in the Sacramento Valley identical in its main features with the plan since adopted by the State. The report says:

The Feathers, Yubas, and Upper Sacramento bring the great body of waters from the upper country, which being concentrated at the mouth of the Feather and there finding the channel of the Sacramento unable to carry them off, overflow its banks and spread down the side of the river to Suisun Bay. I would propose to cut a canal from the Sycamore Slough down the edge of the overflowed land to the bay.

Now mark these words from that report:

A system of reclamation similar to the one proposed, or in fact any other should not be left to individuals or counties, but be general for the whole state where required and under the care of a state officer. Now is the time for a determination of the state policy in regard to this matter, and when a proper system is once adopted, all direct legislation thereupon should be in accordance with it.

In 1894 Messrs. Marsden Manson and C. E. Grunsky, consulting engineers to the Commissioner of Public Works, submitted a plan for flood control of the Sacramento River. Its essential features were as follows:

1. *Channel rectification.*—The enlargements of the natural river channels to their greatest capacity, and the straightening of crooked portions and the confinement of water to the improved channels.

2. To divert surplus water above the safe carrying capacity of the channels at selected points, and to control its diversion by means of permanent concrete weirs.

3. To convey the diverted surplus waters in by-passes, that is, between substantial levees properly placed down the trough of the basins, returning the water again to the river at proper points.

The rectification of the channels embraced the widening of the mouth of the Sacramento below the mouth of Cache Slough, and the utilization of Steamboat Slough as one of the main drains.

The by-pass in Butte Basin was to be 2,400 feet wide with the tops of the levees 3 feet above the assumed flood plane.

The Sutter Basin by-pass was designed to be 2,500 feet between levees 15 feet high, and to have a capacity to carry 70,000 second-feet.

The Colusa Basin by-pass was to be 800 feet in width, and to serve principally as a drain to carry off the drainage entering from the west side. It was intended to cut through the Knights Landing ridge and connect into the Yolo by-pass.

The by-pass down the Yolo Basin was to be 4,000 to 4,500 feet wide, with levees 15 feet high. Its capacity was to be 108,000 second-feet to Putah Creek and 130,000 second-feet below that point.

The easements or weirs were to be placed as follows:

The Butte Basin weir 4,000 feet long, 2 miles above Butte City.

Colusa Basin weir, 750 feet long, 4 miles below Jacinto.

Sutter Basin, one in the head of Butte Slough, another at Tisdale break, combined length 3,700 feet.

Yolo Basin, two weirs having aggregate length of 6,500 feet, below the mouth of Feather River, and a third, 1,200 feet in length, 7 miles below Sacramento City.

The crests of all of these weirs were to be at the general height of the river bank and at about 3 feet below the assumed flood plane.

The Commissioner of Public Works constructed three of the weirs recommended, to wit: Butte Slough, Tisdale and Elkhorn, 10 miles below the mouth of Feather River. These weirs discharged directly into the basins without levees or training walls to conduct the water through the basins. None of them were of the dimensions recommended in the report. The first named, Butte Slough weir, washed out before it was completed and has never been replaced. The other two are still intact and operate at each flood. The maximum discharge provided for in this plan was 200,000 second-feet below Cache Slough.

Before the system of stream measurement was installed giving accurate information as to flood volumes, eminent engineers differed in opinion as to the proper methods for handling the problems.

In 1880, Wm. Ham. Hall, State Engineer, associated with a board of consulting engineers consisting of Gen. George S. Alexander and

Col. Geo. H. Mendell, Corps of Engineers, United States Army, devised a plan to confine the river to a single channel by high and strong levees. If the flood flow were held in one channel, the great volume would scour the river bed deeper and create a capacious channel.

Temporary by-passes were to be provided to carry off surplus water until the river had increased its channel capacity to carry all floods.

In 1904 a commission composed of Major T. G. Dabney, Chief Engineer of the Yazoo Mississippi Delta Levee District; Major Henry B. Richardson, member of the United States Mississippi River Commission; Major H. M. Chittenden, Engineer Corps, U. S. Army, and M. A. Nurse, Chief Engineer for the Commissioner of Public Works of California, made a study of the flood control problem on the Sacramento and presented a plan for its solution.

The plan recommended by this commission, frequently referred to as the Dabney Commission, follows the general lines suggested by General Alexander and his associates in 1880. Its main features as stated in the report are as follows:

(a) To confine the flood waters to the channels of the various streams by means of levees, so as to prevent destructive inundations of the fertile lands.

(b) To correct the alignment of the river by cut-offs where necessary, and to increase its channel capacity by mechanical means wherever current action fails to accomplish this purpose.

(c) To collect the hill drainage, which now loses itself in the basins, in intercepting canals and convey it into the river at selected points.

(d) To provide escapeways over the levees for surplus flood waters during the period of channel development, and to provide for the disposal of this water in connection with the hill drainage.

(e) To provide for the relief of the basins from accumulation of rain and seepage water by means of pumps wherever gravity drainage is not practicable.

The flood discharge to be taken care of was estimated to amount to 250,000 second-feet at the mouth of the river. This estimate was based upon careful analyses of all data available at that time. The cost of the proposed works was estimated at \$23,776,000.

Like all other plans that had been offered for the reclamation of the great Sacramento valley from the devastating floods that periodically visits it the elaborate report of the Dabney Commission was "received and placed on file" without action taken thereon. And so it has been from the very dawn of the state's history—state engineers, federal officers, commissions and boards of public works have time and again urged the measures advocated by Brewster, but not until more than half a century had elapsed did the legislature declare a settled policy for the state.

Sixty years of abortive attempts to reclaim the overflow lands by individual action; of periodical floods causing the loss of crops and destruction of property worth millions of dollars; of growing injury

to navigation—sixty years of investigation, agitation and effort to unite and harmonize varied interests, and twenty years of study and research by the agents of the Government finally crystallized into a comprehensive plan—a gigantic project for the control of floods, improvement of navigation and reclamation of flooded lands.

This plan is presented in a report made to the Government by the Debris Commission, under the title, "Reports on the Control of Floods in the River Systems of the Sacramento Valley and the adjacent San Joaquin Valley, California," dated August 10, 1910. It was transmitted to the House of Representatives by the Secretary of War, June 27, 1911, and two days later referred to the Committee on Rivers and Harbors, and printed as House Document No. 81, sixty-second congress, first session.

### FLOOD CONTROL.

This report and the plan proposed by it was made in pursuance of the provisions of an act of congress approved March 1, 1893, known as the "Caminetti Act," creating the California Debris Commission which act prescribes the duties of the commission to be:

1. To regulate hydraulic mining so as to permit the resumption of that industry so far as is compatible with the protection and restoration of the navigability of the Sacramento, Feather and San Joaquin rivers, and the prevention of damage from overflow.
2. To improve the navigability of all the rivers of this system, deepen their channels and protect their banks, with a view of restoring as near as practicable and the necessities of commerce and navigation demand the navigation of said rivers to the conditions existing in 1860.
3. To afford relief in flood time and to provide sufficient water to maintain scouring force in summer season.

The first object stated in the Caminetti act was quickly accomplished after the Debris Commission was formed.

The second object was made the subject of several years investigation and study, resulting in plans for partially obtaining the desired end, which will be more fully described under the head of "Debris Control." In a special report dated June 30, 1907, the commission submitted plans for the continuance of the control of debris in the tributaries of the Sacramento River.

The third object enjoined by the act creating the Debris Commission: "To afford relief in flood time and provide sufficient water to maintain scouring force in summer season," was the subject of the exhaustive report above referred to as appearing in House Document No. 81.

This report was made to the Chief of Engineers, United States Army, and he, in transmitting it to the Secretary of War, said:

Recognizing that the interests of navigation, debris control and flood control are inseparably connected, the commission has considered these problems as one general project, thus utilizing for the common good to the fullest extent practicable the works for any one of the three projects.

A preliminary report in 1907 had recommended enlarging and straightening the lower reaches of the Sacramento as a necessary part of any scheme for flood control, and asked for \$800,000 for beginning the work. The report was made after the California legislature had adjourned, but promptly upon its reassembling by an act approved March 1, 1909, it appropriated one half of the amount asked for.

Congress in the River and Harbor Act, approved June 25, 1910, appropriated a like amount, making \$800,000 available for the purpose stated. The state's appropriation was placed in the treasury of the United States to be expended by the national authority for the purpose specified.

Referring back to the plan for complete control of floods in the Sacramento, proposed in the report of the Debris Commission, referred to as House Document No. 81, (62d congress). After going extensively into the history of floods and flood conditions, quoting all available data, and discussing former reports and plans, particularly the Dabney plan of confining the floods to one channel, the report says:

The principal objections to this project (Dabney plan) are its incompleteness and owing to lack of flood-discharge data, its inadequateness. The principals upon which it is based, however, are sound. The project proposed by the commission differs from that project principally in providing for the complete control of a much larger flood discharge.

It seems practicable to control the floods in this river and its tributaries in such a manner as to secure the desired results without the objectionable features of injury to Suisun Bay; injury to navigation in Sacramento River from Cache Slough to Colusa; indefinite period of construction, and excessive cost.

With regard to the difference in magnitude of flood flow provided for in the two projects it points out that the former plan was for 250,000 second-feet at the mouth of the river, while the flood of 1907 had furnished 600,000 second-feet and continues:

That project provided for the moving of about 320,000,000 cubic yards of material, of which 214 millions were to be removed by the river (scour) and carried to tidal waters. A modification of the project to meet the present known maximum flood discharge will involve the moving of more than two and one half times the above amount. If the same assumption is made with reference to scour by the river, then about 545,000,000 cubic yards will be carried to tidal waters. This amount of material cannot be carried into Suisun Bay without injury to that body of water, resulting in injury to navigation on both the Sacramento and San Joaquin rivers and the reclaimed areas along that bay.

The new plan proposed by the Debris Commission was to consist of the following:

1. Increasing the carrying capacity of the river above the Moulton Break to 250,000 second-feet by moving the levees farther apart and making them higher.

2. Constructing a weir at Moulton's break, 13 miles above Colusa, and connecting it by a permanent by-pass through Butte and Sutter basins with the Sacramento River at the confluence of Feather River.

The Moulton weir to have a capacity to pass 185,000 second-feet, and the by-pass to carry 220,000 second-feet. This would reduce the flow in the main river below the Moulton weir to 65,000 second-feet.

3. Reconstructing the present Tisdale weir so as to pass 35,000 second-feet and convey it in a by-pass to the Sutter Basin by-pass. There will then remain 30,000 second-feet in the river below Tisdale weir.

4. Confining the flood waters of the main river to its channel between escape weirs, and also confining the waters of Feather River and all other tributary streams.

4a. The improvements proposed for the Sacramento River between Moulton Weir and Feather River contemplate four cutoffs, viz: Race-track Bend, Ministerial Bend, Collins Eddy, above Knights Landing, and one cut eliminating Grays and Woods bends, below. No other cutoffs are contemplated on the main river or any tributaries, but improvement is proposed of Steamboat Slough above Cache Slough, by moving back and raising its levees.

5. Constructing a weir opposite the mouth of Feather River to carry all flood waters in excess of the capacity of the river below. It is estimated that the river below the junction of Feather River may carry 50,000 second-feet, and that the weir (since named Fremont weir) will be required to pass 400,000 second-feet, to be conveyed in a by-pass through Yolo Basin to Cache Slough. This by-pass will receive accessions of flood waters from Colusa Basin, Cache and Putah creeks and the drainage from the Coast Range hills and West side plains. The by-pass channel to be enlarged as it progresses to accommodate these accessions.

6. Constructing a drainage canal from Colusa Basin through Knight's Landing ridge to connect with Yolo by-pass. This canal to have a capacity of 10,000 second-feet.

7. Constructing a weir at Bryte's Bend, two miles above the mouth of American River, and connecting it by a by-pass channel with Yolo by-pass. This weir to divert 70,000 second-feet, leaving 100,000 second-feet of the combined waters of American and Sacramento rivers to be carried by the main river to the junction of the Yolo by-pass at the mouth of Cache Slough.

8. Improving the river below the American so as to carry 100,000 second-feet.

9. Dredging the river below Cache Slough, widening and deepening the channel to flood channel section to carry 600,000 second-feet. This work includes a cutoff across Horseshoe Bend.

10. Collecting drainage from hills and adjacent plains in intercepting canals and conveying it to the river or by-pass channels at convenient points.

11. Providing for the drainage of the basins by culverts and gates and installing pumping plants at various points.

Item (6) above, Colusa Basin Drainage Canal is made necessary by reason of the construction of the levees below Tisdale weir which would close Sycamore Slough at Knight's Landing, and which is the natural drainage channel from Colusa Basin. The Colusa Basin Canal has since become known as "Knight's Landing Ridge Cut."

The great flood of 1907, which is considered the largest that has occurred since the occupation of the country by Americans, with the exception of that in 1862, was exhaustively analyzed in a paper presented to the American Society of Civil Engineers by Messrs. W. B. Clapp, E. C. Murphy and W. F. Martin in 1908.\*

The estimates of flood discharge presented in this paper were largely used as a basis for the estimates by the Commission of the requisite channel capacities, concerning which, after quoting tables comparing different floods, the report says:

It is thought that the estimates of Messrs. Clapp, Murphy and Martin should be followed very closely in determining the necessary channel widths, and their maximum is assumed, with certain allowances for flattening of the flood wave in passing down the improved channels.

It is doubtful if the flood in the American was a maximum in 1907 and it is not considered safe to estimate its maximum flood discharge at less than 120,000 second-feet.

Considering the above discharge data and the estimated maximum flood discharge of Messrs. Clapp, Murphy and Martin, it is considered that provision should be made for the following discharges:

	Second-feet
Sacramento River below Stony Creek.....	260,000
Stony Creek.....	30,000
Sacramento River at Moulton weir.....	250,000
In river to Tisdale weir.....	65,000
In river from Tisdale weir to Feather River.....	30,000
Tisdale by-pass.....	35,000
Sutter-Butte by-pass.....	185,000 to 220,000
Feather River above Marysville.....	150,000
Yuba River.....	110,000
Bear River.....	30,000
Feather River below Marysville.....	240,000
*Yolo by-pass at spill-way.....	400,000
Yolo by-pass below Colusa Basin Canal.....	410,000
Yolo by-pass below Cache Creek.....	425,000
Yolo by-pass below American by-pass.....	490,000
Yolo by-pass below Putah Creek.....	510,000
From Feather River to American River.....	50,000
From American River to Cache Slough.....	100,000
Below Cache Slough.....	600,000
American River.....	120,000
Colusa Basin Canal.....	10,000
Cache Creek.....	20,000
Putah Creek.....	25,000
†Sacramento by-pass.....	70,000

\*Fremont weir.

†Bryte's by-pass.

The above discharges are large and much larger than many may consider it advisable to provide for. The floods considered, however, were of long duration and but little reduction can be allowed for the flattening of the flood wave under such

\*Volume LXI, Transactions American Society of Civil Engineers, pp. 281-330.

conditions. In the projects that have heretofore been seriously considered, the estimated flood discharges of the main river and of most of its tributaries have been abnormally low, and the possibility of even those low discharges being maintained for some days was not considered probable. The floods of 1907 and 1909 have proved conclusively that a flood in this river may continue for several days at almost the point of maximum discharge. Failure to provide for a discharge such as is shown by these floods of 1907 and 1909 would leave open the way for damage by the occurrence of a similar flood.

The cost of the proposed project the Commission estimated would be \$33,800,000 of which sum \$800,000 had already been provided by Federal and State appropriations.

The Commission expressed its conclusions upon the plan proposed as follows:

The project here submitted differs much from the commonly accepted solution, but this commission is satisfied that it more nearly meets the requirements of the case than any heretofore considered. In a consideration of this project attention is invited to its small estimated cost and short time of completion; also to the fact that the floods are controlled immediately and completely upon its completion.

The results to the State of California in permitting reclamation and preventing damage to reclaimed lands are great, but the United States also gains in keeping the present channels uninjured. It is the opinion of the commission that both should therefore share in the construction of the works under this project, the United States to the extent of  $33\frac{1}{3}$  per cent. It is also the opinion of the commission that the State of California will benefit to such an extent by the control of the floods of the river that upon the completion of this project it should take over and maintain all flood-control works, the United States to provide only for the maintenance of the navigable channels. This seems an equitable distribution both of the first cost and the maintenance.

It is therefore recommended:

*First*—That the United States begin at once the work for the control of the floods of the Sacramento River in accordance with the above project and provide for its early completion.

*Second*—That the United States contribute one third of the cost of work and the State of California contribute the remaining two thirds.

*Third*—That upon its completion the United States turn over to the State of California for maintenance all flood-control works.

In allotting two thirds of the cost of the work to the state, the idea in mind was that it would be divided equally between public appropriations and assessments or contributions collected from the lands benefited by their permanent reclamation. The report was dated August 10, 1910. It was transmitted to the Secretary of War by the Chief of Engineers, June 24, 1911, and by the secretary to the House of Representatives on June 27th and referred June 29, 1911, to the Committee on Rivers and Harbors and ordered to be printed with illustrations.

Soon after the submission to congress of the Debris Commission's report the Governor of California called an extra session of the legislature, and among the matters commended for consideration was the Commission's proposed flood control project.

By an act approved December 24, 1911,\* the report of the Debris Commission was approved with such modifications and amendments as might be found advisable as a plan for controlling the flood waters, improving navigation and reclaiming the overflow lands.

Thus, for the first time in the long history of this matter did the State of California adopt a policy and commit itself to a definite method of procedure. In addition to approving the report of the Commission the act created a State Reclamation Board to carry the project into effect so far as concerned the state's share.

This board was given jurisdiction over any plan of reclamation undertaken on the Sacramento and Feather rivers in order that such plans should not conflict with the flood control project as approved or to be modified and amended by the board. The State Engineer was directed to procure data and make such surveys as might be required to enable the Reclamation Board to amend or modify the proposed plans. The sum of \$10,000 was appropriated to pay the expenses of the surveys.

The Reclamation Board consisted of three members and the Governor appointed V. S. McClatchy of Sacramento, W. T. Ellis, Jr., of Marysville, and Peter Cook of Rio Vista, to constitute the board. The adoption of a comprehensive scheme for flood control and reclamation under the direction of a state body with large powers came none too soon. Ever since reclamation commenced in 1852 any land owner in the overflow region was permitted to "fight the common enemy" in his own way, even though his way meant devastation to his less vigilant or weaker neighbor. Efforts to reclaim the valuable lowlands continued—levees were built, farther and farther into the basins. The investigations made for the board discovered that already such levees extended more than a mile into one of the by-passes that is a vital part of the whole enterprise. Other projects were under way, encroaching upon the waterways contemplated by the Debris Commission's plan. Unfortunately, the law creating the Reclamation Board gave it jurisdiction over reclamation plans "hereafter adopted," so that the plans already inaugurated could not be interfered with nor changed excepting so far as their promoters could be influenced by "moral suasion." This latter was sometimes accomplished. The board found one private enterprise preparing to carry out plans that would completely block an important proposed by-pass. Through the efforts of the board that and other similar obstructive projects were modified to conform to the general flood control plan, or abandoned.

The adoption of a settled policy of state control over reclamation and flood control in a way that gave promise of absolute protection greatly stimulated individual effort along those lines. Indeed, so actively did private interests enter upon reclamation and so diligently did they

\*Chapter 25, Statutes, Extra Session, 1911.

prosecute extensive plans, approved by the Reclamation Board, so as not only to avoid encroaching upon the Debris Commission plan, but on the contrary to form a part of those proposed works, it was soon found that a great deal of the public work planned by the commission was being done by private enterprise, making it possible to eliminate much of the cost estimated in the commission's report of 1910. Thereupon the Committee on Rivers and Harbors of the House of Representatives on December 2, 1912, requested the Board of Engineers for Rivers and Harbors to review the report embodied in H. R. Document No. 81, 62d Congress, and to report subsequent information and conclusions thereon.

In compliance with that request the Debris Commission reported February 8, 1913, giving account of the tremendous development above mentioned and the great progress made toward accomplishing the end sought in its former report. The commission estimated that in view of what had been accomplished and the work already planned by private enterprise, the joint governmental costs to complete the works for the control of debris and floods and improvement of navigation according to the plans contemplated in its 1910 report would be \$11,717,008, not including the \$800,000 appropriated jointly for work at the mouth of the river, and not including costs for rights of way.

The Commission recommended that one half of the estimate, or \$5,858,504 be paid by the United States and the other half by the state and that all rights of way be furnished without cost to the United States. It will be seen from the above stated figures that the National Government's share of the cost has been reduced nearly one half. The land owners, however, will not be so fortunate, since they are expected to procure the rights of way, and the price charged for the land to be taken will far exceed the prices considered in the original estimate.

Mention was made in a former paragraph of the appropriation of \$400,000 by the legislature and a like amount by congress to begin the work of widening the mouth of Sacramento River as recommended by the preliminary report of the Debris Commission in 1907 and included in the flood control plan of the Commission's report of 1910.

With the \$800,000 fund in the treasury of the United States the Government was ready to begin the preliminaries for widening the mouth of the river, and to that end a contract was let February 28, 1912, for the construction of two 20-inch suction dredges.

The contract price for these huge machines was \$353,600. Contracts were let in November for 7,400 lineal feet of 20 and 21-inch discharge pipe, and in January, 1913, for pontoons to carry the pipes; for a dredge-tender driven by gas engines, and other equipment.

Foreseeing that the completion of the dredges and their operation later, would exhaust the funds provided, the state legislature in 1913

Plate XX—A. Dredge "San Joaquin," Widening Mouth of Sacramento River.

B. Scene on Sacramento River. Natural Bank Protection.

appropriated \*\$200,000 to continue the work, anticipating that congress would appropriate a like amount.

The dredges with full equipment and accessories, including a mooring basin, wharf and warehouse at Rio Vista, were completed and the two dredges named "Sacramento" and "San Joaquin" were placed in commission in the summer of 1913 and were then ready to begin the work of enlarging the lower reaches of the river.

Removing the constriction below Cache Slough and enlarging the stream from a capacity of 165,000 second-feet to a size capable of passing the accumulated floods from above, now known to amount to 600,000 second-feet, has received the popular designation of "uncorking the bottle."

The surveys and investigations made by the Department of Engineering in behalf of the State Reclamation Board had shown that complete control of floods in the Sacramento could not be accomplished without at the same time controlling the floods of the San Joaquin Valley.

### SAN JOAQUIN VALLEY.

Three quarters of a million acres of land are subject to overflow from the flood waters of the San Joaquin and its tributaries, which lands are equally as fertile as those of the Sacramento, and equally entitled to any benefits that the other might receive from governmental protection.

Recognizing the necessity of effecting flood control, reclamation and improvement of navigation upon both stream systems as a whole, the legislature in 1913 passed an act extending the scheme to include the San Joaquin, and enlarging the Reclamation Board to administer it. The essential features of this act (Chapter 170, Statutes 1913), are epitomized as follows:

The district is designated "Sacramento and San Joaquin Drainage District."

The boundaries extend from near Chico Landing on the Sacramento, enclosing the flooded area on both sides of the river, including Feather River a short distance below Oroville; including Marysville, Colusa, Sacramento, and to the mouth of Sacramento River, and thence covering the entire San Joaquin Delta region excepting in the immediate vicinity of Stockton, thence up the San Joaquin to a point about eight miles above the junction of Fresno Slough.

The State Engineer is directed to gather data, make surveys and investigations for the formulation of plans for the improvement of navigation and the reclamation of lands subject to inundation in both valleys.

The management and control of the district is vested in the Reclamation Board which is increased to seven members, at least three of whom

---

\*Chapter 452, Statutes 1913, approved June 7, 1913.

must be residents or land owners in that portion of the district lying in San Joaquin Valley.

Any plan of reclamation within the territory subject to inundation must be approved by the Reclamation Board, and unless so approved is void and works undertaken without the board's approval are declared to be a public nuisance and may be prosecuted or abated by the board by suit in the courts.

The intent of the act is best described in section 7 of the act itself, which is here quoted:

The State of California and the people thereof are hereby declared to have a primary and supreme interest in having erected, maintained and protected on the banks of the Sacramento and San Joaquin rivers and their tributaries and the by-passes and overflow channels mentioned herein, good and sufficient levees and embankments or other works of reclamation, adequately protecting the lands overflowed by said streams and confining the waters of said rivers, tributaries, by-passes and overflow channels within their respective channels, and it shall be the duty of the reclamation board at all times to enforce on behalf of the State of California and the people thereof the erection, maintenance and protection of such levees, embankments and channel rectification as will, in their judgment, best serve the interests of the State of California. The purposes and objects of this act are to carry into effect the plans of the California Debris Commission for the control of the flood waters of the Sacramento and San Joaquin rivers and their tributaries, and to vest in said reclamation board control and jurisdiction over said plans and such other plans as may be adopted by said board, excepting such portions of said plans as relate to channel excavation, enlargement, rectification and control in the Sacramento River and the construction of weirs; it being the intent of this act that all work and control in the said stream and the construction of weirs shall remain with the United States and the State of California, concurrently, but this exception does not apply to the San Joaquin River and its tributaries.

This act and every part thereof shall be liberally construed to promote its objects and to carry out its intents and purposes.

The possibility of adapting the by-pass channels to navigation and their protection against being obstructed by fixed bridges or other structures is safeguarded by section 10 of the act, as follows:

The reclamation board shall require the owners of any railroad, electric railroad, wire line, wagon road or other structure crossing any of these by-passes or overflow channels herein provided for, to provide and maintain one or more suitable draws or other appliances within any such by-passes or overflow channels to permit the passage of water craft, dredgers or other machines used in the construction of reclamation works and to open said draws or appliances upon reasonable notice given by any person desiring to pass the same. Said draws or appliances shall be located at such points as shall be designated by said board. A failure of the owner of any of said structures to comply with this section shall render such owner liable to any person for the damages caused to such person by such failure.

The board is empowered to acquire by purchase, condemnation or otherwise, lands, rights of way, easements, property or materials, requisite for the purposes of the project:

To levy assessments upon the lands in the district to provide funds;

To examine reclamation or drainage districts which have issued bonds and to certify as to the sufficiency of the security for such bonds.

The sum of \$100,000 was appropriated, with the proviso that \$50,000 should be returned to the State Treasury out of the first moneys collected for assessments upon the lands of the district; \$20,000 of the appropriation was directed to be allotted to the State Engineer to pay the expenses of the surveys and investigations enjoined upon him.

The Sacramento and San Joaquin Drainage District lies in fourteen counties. The approximate area in each is exhibited in the following table:

\*TABLE 5.  
Approximate area of district.

County, Sacramento valley	Area, acres	County, San Joaquin valley	Area, acres
Butte .....	121,677	San Joaquin.....	256,960
Glenn .....	69,760	Contra Costa.....	50,240
Colusa .....	178,880	Stanislaus .....	36,956
Yuba .....	57,600	Merced .....	202,880
Sutter .....	222,080	Madera .....	55,040
Yolo .....	173,280	Fresno .....	67,040
Solano .....	55,520		
Sacramento .....	178,640	Total, San Joaquin Valley.....	669,116
Total, Sacramento valley.....	1,057,437	Total, Sacramento Valley.....	1,057,437
		Total in district.....	1,726,553

\*The figures in the table are taken from the report of the Reclamation Board, April, 1914.

The enlarged Reclamation Board was completed by the appointment of A. G. Folger of Sacramento, G. A. Atherton and Louis H. Frankenhimer of Stockton, and M. C. Zumwalt of Tulare. The members of the former board, V. S. McClatchy of Sacramento, W. T. Ellis of Marysville, and Peter Cook of Rio Vista, were continued in office under the terms of the act.

The board organized by electing Mr. McClatchy president and Mr. Ellis as secretary. Owing to the immense amount of office work developing it was found necessary to have an executive representative of the board present at all times and Mr. W. H. Hogue was appointed executive secretary.

Mr. E. A. Bailey, who had been detailed from the Department of Engineering to conduct the surveys for the old board, was assigned to the charge of surveys and investigations for the new board.

The surveys for working out the details of the project and the proper location and dimensions were vigorously prosecuted by a large force of engineering parties. At the same time a sufficient office force was maintained to keep the data well worked up and to study the relations between flood control, reclamation and navigation as revealed by the investigations made in the field.

The position for several weirs and by-pass levees were determined upon and specifications prescribed fixing their character and dimen-

sions, and only those levees built by private enterprise which conformed to the specifications have been approved by the Reclamation Board.

As located, the levees required to complete the project as outlined in the Debris Commission's report and amended and modified by the Reclamation Board aggregate 690.42 miles in length, of which 503.85 miles are levees to confine the rivers to their channels and 186.57 miles are levees forming the by-passes. They are segregated as follows:

TABLE 6.  
Levees required for flood control. Sacramento Valley.

Stream	Length of channel, miles	Length of levees miles	
Sacramento -----	200.7	371.05	503.85 miles
Feather -----	39.7	78.10	
Yuba -----	*7	15.90	
Bear -----	*10	27.60	
American -----	35	11.20	
Butte by-pass -----	11.5	24	186.57 miles
Butte Slough by-pass -----	6	6.8	
Tisdale by-pass -----	4.2	8.45	
Sutter by-pass -----	31.15	59.29	
Yolo -----	42.50	84.43	
Sacramento -----	1.8	3.60	
Total -----	389.55		690.42 miles

\*Approximate lengths.

Since the organization of the great reclamation and drainage district the activities of private enterprise in building reclamation works under the direction of the State Reclamation Board has progressed so rapidly that in April, 1914, the board reported that it had approved the construction or plans for the construction of 288.44 miles of the levees, constituting 42 per cent of the whole mileage required. That is to say, nearly one half of that portion allotted to the land owners is already practically accomplished.

Of the part assigned to the national and federal governments, i. e. enlarging and rectifying the river channel, and constructing the weirs at the heads of the by-passes, relatively little has been done. The location and dimensions of some weirs have been determined, but details of design have not yet been worked out.

For enlarging the river channel, as related elsewhere herein, two large dredges have been procured with which to execute it.

The work of excavating at the mouth of the Sacramento River was begun a short distance above Collinsville, by the dredges Sacramento and San Joaquin in August, 1913. Each machine is operated by a crew of about 40 men. Up to the close of the fiscal year ending June 30, 1914, there had been excavated from the channel of the river

3,373,044 cubic yards of material at a total cost of \$168,036.47, or an average of 4.981 cents a cubic yard.

At this time there was a little more than \$50,000 remaining of the original fund of \$800,000. Congress failed to specify anything for the continuance of this work in the rivers and harbors appropriation bill, and it was feared that the dredges would have to be laid up, as the appropriation made by the state was contingent upon congress also making an appropriation. Fortunately, the Board of Engineers for Rivers and Harbors was able to allot \$60,000 for the purpose, which, with a like amount from the state's \$200,000 appropriation of 1913 makes a fund of \$120,000, which will be sufficient to keep the dredges in operation until the next congress has an opportunity to make an appropriation for the continuance of this important work.

The work accomplished by the dredges as above related was about equally divided between the west and east sides of the river. That deposited in the west of the channel was used for filling low lands or placed out of reach of floods. Of 1,549,996 cubic yards removed by the dredge Sacramento most of it was used in building a levee along the new alignment on Sherman Island.

For more detailed account of the operations of the dredges the reader is referred to the report of the Debris Commission at the close of this chapter.

It has been stated that the San Joaquin arm of the great drainage district terminates in the San Joaquin River a few miles above the confluence of Fresno Slough. Upon examining a map of San Joaquin Valley it will be observed that the river enters the valley on the east side about midway of its length and runs directly across the valley to its junction with Fresno Slough, and turning sharply to the northwest runs along the trough of the valley to the head of Suisun Bay. From the San Joaquin River the valley extends southeasterly more than 150 miles to the foot of the encircling mountains.

About 40 miles from the bend in the San Joaquin River the valley is crossed by a ridge some 60 feet higher than the floor of the valley at the river, and 37 feet higher than the land twenty miles farther up the valley. This ridge was formed by the meeting of two "delta fans" made by the deposit of alluvial soil brought down from the mountains—on the east by Kings River, and by Los Gatos Creek on the west.

The presence of the ridge divides the valley, creating a basin to the southwest, the extreme bottom of which is the bed of Tulare Lake. This lake was formerly of considerable size, covering more than 800 square miles. When full and flowing over the ridge, the escaping water found its way to the San Joaquin River through Fresno Slough.

Kern River enters the valley at the extreme southeast corner, and its flood waters find their way to Tulare Lake. The lake is also fed by

Kaweah and Tule rivers from the east and Kings River from the north. Extending along both sides of Fresno Slough to Tulare Lake, encircling the lake and extending thence on both sides of Buena Vista Slough (the overflow channel of Kern River), to and enclosing Buena Vista and Kern lakes, which are catch basins for Kern River, is a large body of overflow land ceded by the United States under the Swamp Land Act because of its being subject to periodical flooding. Extending upward along all of the streams reaching this body of swamp land are arms of the same character of land flooded by the waters of these streams.

From the mouth of Fresno Slough to the head of the valley the area of swamp and overflow land just described is about 900,000 acres, including approximately half a million acres originally covered by the waters of Tulare Lake. These lands were all covered with water at the time the United States extended its system of land surveys over the valley in the early fifties, which fact caused their segregation to the state as swamp and overflow lands. In addition to the 900,000 acres above mentioned there are about 350,000 acres in the delta regions of Kern, Tule, Kaweah, and Kings River not so segregated, but which are subject to destructive floods whenever the respective streams are swollen to flood dimensions and their enclosing dikes give way. The water escaping from the channels and flowing over the deltas are gathered together again, adding to the natural flow of the streams and all uniting to spread the flooded area on the valley floor.

It appears from the foregoing that about one and a quarter million acres of land in the San Joaquin Valley outside of the Sacramento and San Joaquin Drainage District, are subject to inundation and devastating floods.

A large part of these lands is "reclaimed" more or less completely, but as in the district, those most secure from danger owe their immunity largely to the weakness of their neighbors' defenses, though it is probable that the success of the levees in protecting the enclosed land is principally due to the fact that no excessively great floods have visited this region since reclamation works were introduced. The last flood of sufficient magnitude to fill Tulare Lake to overflowing occurred in 1867. It is quite certain that neither of the so-called floods of 1879, 1884, 1904, 1907, or 1909 was nearly so large, and there is good reason to believe that floods occurred in 1833, some time in the '40s, and in 1862, that far surpassed the extent of that in 1867 mentioned above as having filled the lake the last time.

The absence of any abnormal flood flow since 1867 and the diversion for irrigation of all of the summer flow which formerly counterbalanced the evaporation from the lake caused the latter to gradually dry away, until 1897 when it entirely disappeared. As the water

receded, settlers followed it, building levees to prevent its slight rise from winter rains from flooding their lands.

The levees constructed were slight structures only a few feet high, but were considered sufficient since the people optimistically believed the lake will never come back, therefore their puny levees were all-sufficient. But subsequent events proved that their optimism was not justified, as the following recital concerning the fluctuations of Tulare Lake, from the record of the Department of Engineering will show:

During the fifties and after filling to overflowing in 1862, the area of the lake remained nearly stationary for several years and then gradually diminished. In 1880 the Government caused it to be surveyed when it was found to have an area of about 400 square miles. The elevation of the water surface at this time was about 193 feet above sea level, being then about fourteen feet deep. Its area continued to shrink and in 1896 nearly the whole lake bed was dry. Large and numerous canals had been constructed diverting all but the flood waters from all of the streams. Upon the lake bottom itself canals were built diverting the waters out of the channels and distributing them over the uncovered lands outside of the remnant pond of the lake. Water from Kings River was taken by ditches running around both sides.<sup>1</sup>

By 1896 nearly the whole lake bed was uncovered and under cultivation and the next year entirely so, the county surveyor that year completing the surveys for the sale by the state of every acre formerly covered by the lake. For two years following successful farming was conducted, immense crops of wheat and barley being produced, yielding as much as seventy bushels to the acre.

The winter of 1900-01 was disastrous. Many farmers were financially ruined by the waters of Kings River filling the basin enclosed by the reclamation levees, breaking over and inundating the surrounding lands. Thousands upon thousands of acres of grain were destroyed. By the summer of 1904 the lake had dwindled to an area of about 52,000 acres, which soon entirely disappeared and in 1905 the lake bed was again dry and farming on a large scale was resumed, but this was ill-timed as subsequent events showed. The United States Geological Survey cooperating with the State of California in hydrologic research reported upon the conditions at this time in Water-Supply Paper No. 251, page 234, and following, as follows:

On March 15, 1906, the first water reached the lake bed at the mouth of Kings River and began spreading out over a large area of bottom land upon which stood a crop of wheat almost matured. A few days later water from Kaweah and Tule rivers reached the lake. Then began a steady rise which rapidly submerged an increasingly large area of wheat fields. On June 23, overflow water from <sup>2</sup>Kern

<sup>1</sup>The same was true of Tule River, ditches being taken out of both sides and running both west and south.

<sup>2</sup>This is said to have been the first time in twenty-five years that Kern River water reached the lake.

basin cut through the sand ridge to the south and flowed into the lake, which for a few days afterwards rose at the rate of 0.2 feet a day. On August 4, the water reached its greatest height for the year 1906 and the lake had an area of about 300 square miles and a maximum depth of 12.7 feet.

During the ensuing winter the water continued to rise so that in July, 1907, it had reached a depth of 14 feet and covered practically the same area surveyed in 1880.

Since 1907 the waters of the lake have continued to fluctuate, alternately rising and falling but with a general downward trend. On June 30, 1912, the gauge showed a depth of 8.2 feet, and in the summer of 1914 it was again dry, with nearly the whole bed under cultivation.

Each time that the levees have been destroyed they have been rebuilt or new ones constructed upon other alignments, and each time they were made stronger and higher, but never according to any systematic plan. Each owner, or group of owners forming a district, has been intent upon saving his own land from flooding instead of all joining in a comprehensive scheme that would afford protection to all. During the last few years, some small districts have been consolidated into larger bodies, and by thus combining resources have been able to build better levees, but still there is not the concert of effort that must obtain before the reclamation of Tulare Lake can become a fact.

Fortunes have been expended in attempts to develop these lands—and lost. Other fortunes are being invested in further attempts. Dredges are at work building levees, but each unit is working independently—independently and in a measure antagonistically.

In discussing the hitherto futile attempts to reclaim the bed of Tulare Lake in the report of this Department for 1912 it was said:

It is greatly to be regretted that the interests owning this great body of a half million acres of fertile lands capable of high development could not be united into one strong organization, which would be able to effect a complete reclamation of the whole at a much smaller unit cost than that being obtained by divided effort and which will always be precarious.

It may be observed that not all whose interests lie in this region are indifferent to the advantages to be gained by the union of effort mentioned as requisite to a complete reclamation of the basin, and a sentiment has been expressed among the owners in favor of having the Sacramento and San Joaquin Valley Drainage District extended to embrace the Tulare Lake Basin.

In support of such extension it is pointed out that conditions affecting the disposition of the waters of Kings River have greatly changed in late years. Where formerly all of the water of that stream ran into Tulare Lake excepting in extremely high floods, now only a minor part of any flow reaches the lake, but runs across the divide before mentioned into Fresno Slough and thence to the San Joaquin River. When the quantity is not excessive it is intercepted and used for irrigation, but

owners of land bordering on the San Joaquin express a fear that should such floods occur as have been known upon Kings River it would be beyond the ability of existing works to control, and the accession of its flood waters to the already engorged flood of San Joaquin River would tax the reclamation works along that stream beyond their strength. Should Tulare Basin also be filled and add to the flood it is declared the results to the lands of the San Joaquin would be disastrous.

Upon the other hand, should the Kings River weirs, gates and embankments be sufficient to prevent its flood running to the San Joaquin, the waters would be turned into Tulare Lake with destructive results.

It is contended by some of each of the conflicting interests: (1) those directing the controlling works in Kings River; (2) the owners of San Joaquin reclaimed lands, and (3) those owning threatened lands in Tulare Lake, that the problem of handling the matter so as to safeguard all of these interests can only be solved by correlating and uniting them in one project.

It is urged with strong emphasis that since one of those interests is already embraced in the Sacramento and San Joaquin Drainage District the logical method of effecting the desired union of effort is to extend that district to include the lands subject to overflow in Tulare Lake Basin.

It seems equally logical, then, to go farther and include Kern Lake basin, since the works erected in Tulare Lake will be subject to danger from the waters of Kern River whenever they shall get beyond the control of local restraint.

Two large river systems traversing seventeen counties, having 600 miles of open navigable waters, carrying a recorded combined flood discharge of more than a million cubic feet of water per second, a maximum annual flow of 54,678,000 acre-feet, and a mean annual flow of 40,950,000 acre-feet; bringing devastation and ruin to a million acres of fertile land and threatening and endangering two million acres more; affecting navigation upon 600 miles of navigable waters present problems too big to be solved by the disconnected efforts of reclamation districts or even by county organizations, but must be handled as one project administered by one body supported by the power and resources of the state.

It is, therefore, recommended that by proper legislative enactment the boundaries of the Sacramento and San Joaquin Drainage District be extended so as to include the Tulare Lake Basin and the Kern Lake Basin.

Flood control problems in California are not confined to Sacramento and San Joaquin valleys. Other communities have been moved to ask the Department of Engineering for assistance, but it is out of its power

to do so excepting to give such advice as the experience of the department qualifies its engineers to offer. This has been freely done, but it is not enough.

Streams other than those above discussed are given to devastating floods. In 1904 the Colorado River forsook its channel and for three years poured its floods into the Imperial Valley, causing millions of dollars damage and the expenditure of more than \$2,500,000 in closing the break and constructing works to prevent a recurrence of the disaster.

Only a few months ago a flood in Los Angeles River spread through the city and over the adjacent country, inflicting immense loss of property. Such conditions, if allowed to recur, threaten the integrity of Los Angeles harbor.

In both of these instances it is claimed that to provide adequate protection is beyond the resources of the communities to furnish without great sacrifice unless state aid in some form be extended.

Financial as well as engineering assistance has been given to stricken communities on Eel River and Mad River, but in a small way, financially.

It is suggested that if it be the policy of the state to lend aid to such enterprises it should be done in every case upon an equal basis, and that the expenditure of public moneys or of moneys obtained through state credit should be made under the direction of state authority.

It has been further suggested that such enterprises as above contemplated should be administered by some such agency as the State Reclamation Board; looking to the State Department of Engineering to conduct investigations, design plans and supervise the construction of works, all in conjunction with the local governing board and engineering force of each project in the same way that now obtains in the Sacramento and San Joaquin Drainage District project.

### THE DEBRIS PROBLEM.

The discovery of gold in Sutter's mill race at Coloma in 1848 by John Marshall resulted in the development of an industry which in an incredibly short time drew hundreds of thousands of men to a practically unknown land. The hitherto silent canyons and hillsides now rang with the clink of pick and shovel and echoed the roar of rushing water through great monitors. Swarming over hills and into every nook and cranny for a third of a century these hordes of brawny, restless miners feverishly dug and washed for gold, unconscious of the havoc this work would cause below. It is said that thirty thousand of his busy kind were counted at one time on the Yuba and its tributaries. Whole mountain sides were torn down, and the earth and gravel and stones sent rushing through long sluices and into the river channels to be carried

farther and farther, and finally dropped on the beds of quieter streams in the valley. No one gave thought of the consequences of sending this avalanche upon the lowlands.

But soon a pastoral race arrived, and engaging in the more quiet occupation of tilling the fertile valley, quickly found the increasing accumulation of mining debris becoming a menace to their land. The channels of the navigable streams became clogged with the ever-increasing volume of sand sent down from the mines until in the interests of navigation the federal courts enjoined the miners from operating hydraulic mines and that great industry came to a standstill.

In 1893 the "Caminetti Act" was passed by the congress of the United States authorizing hydraulic mining to be conducted wherever by restraining dams the debris could be prevented from reaching the streams. Under these restrictions mining was resumed and conducted to a limited extent. The law, just mentioned, created the California Debris Commission, and in addition to its powers to supervise and restrain mining it was enjoined to devise plans for the improvement and protection of the navigable waters. The Commission consists of three officers of the Engineer Corps of the United States Army.

After six or seven years spent in investigation and study of the conditions and problems presented, the Commission selected the Yuba River as the first point of attack. The conditions on this stream seemed to demand most urgently the remedial measures proposed. A discussion of the conditions which led to the adoption of the plans for debris control on the Yuba River may properly be presented here.

Before this river became the carrier of the great mass of debris liberated by the miners working on its tributaries, it is described as having been a clear stream flowing between well-defined banks. The distance from its confluence with Feather River to the mouth of the canyon, where it debouches into the Sacramento Valley, just above Daguerre Point, is something more than 11 miles.

The canyon at its mouth is more than a mile wide, but gradually narrows as one goes upstream until at the site of the barriers, some four miles above the mouth, it is considerably less than a half mile in width. After emerging from the canyon the gradient becomes less steep, causing a diminution of the velocity of the moving water and a corresponding reduction in its transporting power. It then begins to drop its load, first the heaviest then the lighter material and carrying the lightest even as far as the sea.

Bringing so much debris out of the hills and depositing it in the channel of lesser grade, soon gorged the channel, causing the water to spill out at the sides and seeking the lowest place soon formed other channels. These in turn filled up and still others were formed, shifting first one way and then another until eventually a wide expanse of the plain was

covered. This building-up process continued until the bed of the river covered a space nearly three miles wide, comprising about 25 square miles in area, and extending from Feather River to the hills. This space is sometimes called the Yuba Debris Basin. The depth of this great mass is from 8 to 26 feet, and the volume is variously estimated at from 360,000,000 to 600,000,000 cubic yards.

As the river built up its bed and continued to spread over the adjacent country, the farmers constructed levees to protect their lands from the overflow, so there is now a strong levee on each side, extending from the Feather River to the foothills, and enclosing the debris basin.

Back in the mountains there are yet stores of debris lodged in the "pockets" or holes in the bed of the rivers, and in the side canyons. Each recurring flood dislodges portions of this debris and brings it down to add to that already deposited in the lower levels.

For many years the increase of the deposit in the debris basin was shown by measurements to be about three million cubic yards a year. As the river would bring down a load of material and deposit it, the water would pick up a lighter load and carry it down into the streams below, where it would again be dropped. This constant migration of debris was so great as to practically destroy navigation on the Feather River and caused the Debris Commission to recommend, about 1899, that no more effort be made to maintain navigable conditions on the Feather until the downflow of debris from the Yuba should cease.

Now, when the stores of debris in the mountains shall have been exhausted, and the river shall have no more to deposit, it will continue to pick up the materials it has formerly dropped in the debris basin and carry them as far as the transporting velocity obtains. Reversing the process by which the debris basin was filled, the stream if not restrained would move from one location to another and continue to erode its channels through the great accumulation until it had cut its bed down to a stable hydraulic gradient. In doing this it would transport a very large portion of the hundreds of millions of cubic yards of materials stored in the debris basin.

The plan adopted by the Debris Commission for the treatment of the problem on the Yuba River was, briefly, as follows:

- (1) Barriers were designed to arrest the downpour of debris from the mountain stores.

- (2) Settling basins were devised to impound the debris arriving in excess of the storage capacity of the barriers.

- (3) Training walls were planned to confine the river within fixed limits on its course through the debris basin, so that it should not eventually carry down more than the volume contained in the prism between the walls.

A fund of \$800,000 had been provided, \$400,000 each, by the Federal Government and the State of California, for carrying out the project proposed. Delays were encountered in procuring the necessary rights of way so that not until 1902 could actual construction be commenced.

Four attempts were made during the ensuing five years to construct and maintain barriers in the river above the mouth of the canyon according to the plans, but each time the work was destroyed by the following floods. These barriers were located a short distance below the old mining town of Smartsville. At each attempt to build a barrier the plan was changed from the previous one. The last one, constructed in 1905, was completed to a height of 14 feet above the bed of the stream and provision made for raising it to an ultimate height of 30 feet, as the accumulation of material above it should require. The flood of March, 1907, utterly destroyed it, and the plan to erect barriers in the canyon was abandoned.

While construction of the barrier described was in progress, work on the other features of the project was being prosecuted, to wit: a barrier across the mouth of the canyon, one of the settling basins and the training walls.

The South Settling Basin, situated outside of the debris basin and south of it was completed with concrete inlet and outlet gates. It covered about 1,818 acres and was estimated to have a storage capacity of 8,161,000 cubic yards of sediment. It was, however, never used and by authority of congress was sold in 1911 for \$27,500 which sum was credited to the United States appropriation for the project.

Thus was eliminated from the original plans the barriers in the canyon and the settling basin. There still remain the barrier at the mouth of the canyon and the third feature of the project, the training walls, to discuss.

These works have been constructed largely with gold dredges in the course of their dredging for gold which had escaped from the miners sluices in the mountains and came down with the debris from the mines. These monster machines, costing \$125,000 to more than \$300,000 dig to a depth, sometimes of 70 feet or more below the surface of the ground. All materials are brought up and screened or washed. The cobbles, measuring to one or two cubic feet, are piled at random 20 to 30 feet high.

An arrangement was made with the companies operating the dredges whereby their operation should be conducted where indicated by the Debris Commission, and in such manner as to form a cobble barrier and the training walls required.

This barrier or dike starts at Hallett Point on the south side and runs across the river bed, first diagonally upstream for some distance and then turning sharply downstream crosses the channel and connects

with Daguerre Point on the north side. By this arrangement a basin is created on the upstream side of the barrier.

In order that the river should not rise above the top of the barrier and flow over it a new channel was provided by making a cut through Daguerre Point. This cut is 700 feet wide, excavated in solid material, and provided with a concrete lip or sill across the intake to prevent erosion. In this way a stable channel is provided at a depth far enough below the top of the barrier to prevent the water overtopping the latter and at the same time the sill will prevent the channel cutting down and allowing the stored debris to escape.

The storage capacity of the basin above the cut and barrier is estimated at about 60,000,000 cubic yards.

According to the plans of the project, which have been adhered to as far as they have been completed, the training walls begin at Daguerre Cut and are to extend to Feather River. They are designed to be about 2,000 feet apart in the upper portion and approach nearer together as they progress downstream.

They were mainly constructed by the gold dredges above described, the work of which has been so conducted as to leave two immense cobble dikes, 20 or 30 feet high and 200 to 300 feet wide at the base, one on each side of the intended channel to confine the river in its prescribed course. The walls extend from the mouth of the cut for about one third of the distance to the mouth of the river at Marysville.

The route of the proposed channel is kept cleared of timber and brush so as to offer the least obstruction to the water following the intended course. From examination of physical conditions along the Yuba River the following changes seem to have occurred:

The stores of debris in the canyons is becoming depleted so that the quantity brought down from the mountains is much less than formerly;

The arrest of the flowing debris in the basin above the Daguerre barrier makes a marked diminution in the quantity carried below the barrier;

The confining of the river to a defined channel and lessening of its load of debris has caused it to lower its hydraulic grade line and materially lower the flood plane in the vicinity of Marysville.

The two last are the effects of the works installed by the Debris Commission, and it is confidently believed that further beneficial results will soon be apparent in a decrease of sand deposits in Feather River.

During the last biennial period the principal work accomplished in the Yuba project has been raising the sill at the intake of Daguerre Cut so as to increase the storage capacity of the debris basin above. The new work is finished with a timber cap as it is believed replacing it will be less expensive than repairs to a concrete finished sill made necessary on account of the rapid abrasion by the sand-laden water.

The work relating to debris control and improvement of navigation in the streams of California is under the direction of the Debris Commission. The officers of the United States Engineer Corps, composing the Commission during the last two years were Lieutenant Colonel Thos. H. Rees, Lieutenant Colonel C. H. McKinstry and Major S. A. Cheney, in 1912-13, and Lieutenant Colonel Rees, Major R. R. Raymond and Major Cheney during 1913-14.

**EXTRACT FROM THE ANNUAL REPORT OF THE CHIEF OF ENGINEERS  
TO THE SECRETARY OF WAR.**

WAR DEPARTMENT,  
OFFICE OF THE CHIEF OF ENGINEERS,  
WASHINGTON, August 11, 1913.

**CALIFORNIA DEBRIS COMMISSION.**

Unrestricted mining by the hydraulic process in California resulted in enormous quantities of debris being washed down into the rivers and natural watercourses draining the western slope of the Sierras. Later on hydraulic mining was practically prohibited by the decisions of the courts on account of injury to streams and the adjacent private land.

The act of congress approved March 1, 1893, created the California Debris Commission and provided that the commission should consist of three officers of the corps of engineers appointed by the President, with the concurrence of the senate. The same act prescribed the duties of the commission, which are, first, the regulation of hydraulic mining in the territory drained by the Sacramento and San Joaquin River systems (shown on map opposite page 2492, part 3 of the Annual Report of the Chief of Engineers, United States Army, for 1881), so that mining by that method may be resumed and carried on without injury to other interests in the state, and, second, to mature and adopt plans to improve the navigability of the above-mentioned river systems, to protect same from damage due to mining debris, and to afford relief thereto in flood time.

Regulation of hydraulic mining and plans for improvement and protection of rivers and control of flood waters and mine debris. The operations during the fiscal year ending June 30, 1913, consisted of regulating hydraulic mining in the drainage areas of the Sacramento and San Joaquin River systems to the end that the debris resulting from such operations should be restrained and impounded by the operators of the mines in the vicinity of the latter, and thus prevent it from reaching and causing damage to navigable streams or increasing the existing flood problems in Sacramento and San Joaquin valleys. Examinations and surveys were also made in the drainage area of the Sacramento River to obtain detailed data needed in connection with the preparation of plans for the improvement of navigation, control and disposition of mine debris, and control of flood waters in the drainage area of that stream.

From time of its creation in 1893 up to June 30, 1913, the commission has received 897 applications for permits to mine by the hydraulic process under the requirements of the act of congress of March 1, 1893, and has granted permits in cases where means for properly impounding the debris were provided by the applicants. During that time the commission has also made numerous necessary examinations and surveys of portions of the Sacramento, San Joaquin, Feather, Yuba, Bear, American, Mokelumne, and other streams comprising the Sacramento and San Joaquin River systems, and prepared and submitted general plans and projects for the storage of mine debris in Yuba River and for the control of floods and debris in the Sacramento and Feather rivers. The general project for the control of mine debris in Yuba River was printed, with maps, in House Document No. 431, fifty-sixth congress, first session, and without maps in the annual report of the

Chief of Engineers for 1900, part 8, page 5030-5070. This general project was adopted by congress and by the legislature of the State of California, each appropriating one half the estimated cost of the work. Further information concerning the details of this project and the progress of operations under it are given below, under the subheading "Storage of mine debris in Yuba River, Cal."

The general project for the control of floods and debris in the Sacramento and Feather rivers, the preparation of which involved a large amount of research and investigation, was printed, with maps, in House Document No. 81, sixty-second congress, first session. This general project has been adopted by the legislature of the State of California in its entirety, and partially by congress, that is, to the extent of appropriating \$400,000 for beginning the work contemplated in the commission's preliminary report dated June 30, 1907. (Report printed in the annual report of the Chief of Engineers for 1907, pages 2262-2269.)

Further information concerning the details of the project for the control of floods and debris in the Sacramento and Feather rivers and the progress of operations under it are given below, under the subheading "General project for control of debris and floods in the Sacramento and Feathers rivers." As therein indicated as the result of the enormous development work which has been carried on in Sacramento Valley by numerous local enterprises since the project printed in House Document No. 81, above referred to, was prepared, the commission was able during the past year to make a very material reduction in the estimate of cost of the work remaining to be done.

The \$15,000 given in the appended money statement as the amount required for expenses of the California Debris Commission during the fiscal year ending June 30, 1915, is required to continue during that year the work of regulating hydraulic mining operations and to continue the work of making examinations and surveys in the Sacramento and San Joaquin valleys for the improvement of navigation, control and disposition of mine debris, and control of flood waters, as required by the act of congress approved March 1, 1893.

*Storage of mine debris in Yuba River, Cal.* Following the act of March 1, 1893, creating the commission, Yuba River, a tributary of the Feather, which in turn is a tributary of the Sacramento River, was first considered for treatment, this stream being more filled with debris and carrying more detritus than all the other tributaries of the Sacramento combined. The general project for the treatment of the Yuba was printed with maps, in House Document No. 431, fifty-sixth congress, first session, and without maps in the annual report of the Chief of Engineers for 1900, part 8, pages 5030-5070. The estimated total cost of this project was placed at \$800,000. It was adopted by act of congress approved June 13, 1902. The estimated total cost of the project has been appropriated, \$400,000 by congress and \$400,000 by the legislature of California, the appropriations by congress stipulating that one half the cost of the work should be paid by the State of California.

The Yuba River project contemplated holding the great quantities of mine debris now in that stream and tributaries to prevent it from being carried down into the Feather and Sacramento rivers, this to be accomplished by restraining barriers or dams across the bed of the Yuba, by a storage or settling basin adjoining the river on the south in the vicinity of Daguerre Point, and by training walls below, all as located on Map No. 5 (sheet A), printed with House Document No. 431, above referred to.

Later on barrier No. 1, barrier No. 2, and the flood overflow barrier, shown on map No. 5, above referred to, were eliminated from the project, as was also the storage or settling basin in the vicinity of Daguerre Point. Operations have since been confined to the Daguerre barrier and the works connected therewith in Daguerre Point Cut and to the construction of training walls below Daguerre Point.

The operations during the past fiscal year consisted of making a survey of Yuba River from Parks Bar Bridge, below the Narrows, down to its mouth in Feather River and preparing plans and specifications for protecting and raising the inlet wall constructed across Daguerre Point Cut in 1906. These operations were on account

of new work. The expense was paid, one half by the United States and one half by the State of California.

The total amount expended by the United States on the project up to June 30, 1913, was \$348,013.81, for works of improvement. The State of California has expended a like sum on the work. The sum of \$28,279.48 has been received by the United States from sales of land and other property. The expenditures by the United States have been principally in payment of one half the purchase price of upward of 10,000 acres of land, in payment of one half the cost of the construction of portions of barriers Nos. 1 and 2, one half the cost of excavating a channel through Daguerre Point and constructing a concrete inlet wall across the cut, of one half the cost of constructing a portion of the training walls below Daguerre Point, of one half the cost of constructing a portion of the storage or settling basin on the south side of the river in the vicinity of Daguerre Point, and of one half the cost of clearing trees and brush from the flood channel from Daguerre Point to Marysville, Cal.

The works thus far constructed have resulted in restraining many million cubic yards of mine debris in Yuba River above Marysville. No additional funds are needed for operations in the fiscal year ending June 30, 1915, the available balances of appropriations heretofore made by congress and the legislature of California being sufficient for carrying on such operations as may be necessary during that year.

*General project for control of debris and floods in the Sacramento and Feather rivers.* The conditions along the Sacramento and Feather rivers were set forth in detail in House Document No. 81, sixty-second congress, first session. In a preliminary report, dated June 30, 1907, printed in the Annual Report of the Chief of Engineers for 1907, pages 2262-2269, the Commission stated that dredging was considered the most feasible method to meet the requirements of all the interests involved—navigation, protection from flood overflow, better drainage and disposal and control of debris in the Sacramento and Feather rivers—and submitted an estimate of \$800,000 for the beginning of this work. In submitting this estimate the commission expressed the opinion that one half should be provided by the State of California. The State of California on March 1, 1909, appropriated \$400,000 for this purpose, with the stipulation that—

SEC. 2. This act shall become operative only upon condition that the government of the United States shall, under, by, and through the War Department, assume full charge and control of all work to be done as provided by this act, and also upon condition that a like sum of four hundred thousand dollars be appropriated by the United States for such work.

The appropriation made by the State of California also contained the provision that—

The whole of such amounts appropriated by the congress of the United States and by the State of California shall be expended under the direction of the Secretary of War and the supervision of the Chief of Engineers.

The river and harbor act approved June 25, 1910, appropriated \$400,000 for this work, as follows:

Improving Sacramento and Feather rivers, California: Continuing improvement and toward the controlling of debris and floods, in accordance with the recommendations of the California Debris Commission in its report dated June thirtieth, nineteen hundred and seven (printed in the Annual Report of the Chief of Engineers, United States Army, for nineteen hundred and seven, pages twenty-two hundred and sixty-two to twenty-two hundred and sixty-nine, inclusive) four hundred thousand dollars: *provided*, that no part of this sum shall be expended unless the State of California shall appropriate for the prosecution of said project a like sum of four hundred thousand dollars and deposit the same in the treasury of the United States; *provided further*, That the treasurer of the United States is hereby authorized to receive from the State of California any and all sums of money that have been or may hereafter be

appropriated by said state for the purpose herein set forth; and when so received the said sums are hereby appropriated for said purpose, to be expended under the direction of the Secretary of War and the supervision of the Chief of engineers; and *provided further*, that the work herein provided for shall not be begun until all rights of way needed for levees and spoil banks have been furnished the United States free of cost.

In compliance with the requirements of the act of congress the authorities of the State of California deposited the state's appropriation of \$400,000 in the treasury of the United States on July 1, 1911.

The first work proposed to be done under this project is to afford relief from floods along the lower portion of the Sacramento River (shown on sheet E of maps printed with House Document No. 81, sixty-second congress, first session) by increasing the flood-carrying capacity of that portion of the river.

During the past fiscal year all the land needed for carrying on the operations to the extent permitted by the \$400,000 appropriated by the state on March 1, 1909, and \$400,000 appropriated by the act of congress of June 25, 1910, was furnished the United States free of cost, as required by the last named act, and two suction dredges, including pontoons and pipe lines, and a dredge tender were practically completed.

The amount expended up to the close of the fiscal year ending June 30, 1913, was \$417,490.93 for works of improvement. Of this amount \$400,000 was from the appropriation of congress of June 25, 1910, and \$17,490.93 from the appropriation made by the State of California March 1, 1909.

These expenditures were for the construction and partial equipment of the two suction dredging plants, above referred to, and getting them ready for actual operation early in the coming fiscal year.

The Committee on Rivers and Harbors of the House of Representatives passed the following resolution December 2, 1912:

*Resolved by the Committee on Rivers and Harbors of the House of Representatives, United States*, That the Board of Engineers for Rivers and Harbors, created under section 3 of the river and harbor act approved June 13, 1902, be, and it is hereby requested to examine and review its report of December 27, 1910, upon the navigation and flood control of the Sacramento and San Joaquin River systems, California, printed in House Document No. 81, sixty-second congress, first session, and to report its subsequent information and conclusions thereon.

In response to a request from the Board of Engineers, for Rivers and Harbors to the Chief of Engineers, the California Debris Commission was called upon for a report as to any subsequent information bearing upon the report referred to in the above-quoted resolution. In response thereto the Commission submitted a report on February 8, 1913, in which the following facts were set forth:

In the Commission's report, submitted August 10, 1910, and printed in House Document No. 81, sixty-second congress, first session, the estimated cost of all the work therein proposed was placed at \$33,000,000, and the Commission therein expressed the opinion that the State of California would be benefited to the extent that it should provide two thirds of this amount, leaving the remainder, \$11,000,000, to be provided by the United States. In its subsequent report, dated February 8, 1913, submitted to the Chief of Engineers consequent to the above-quoted resolution of the Committee on Rivers and Harbors of December 2, 1912, the Commission pointed out that since the 1910 report there had been a period of tremendous development in the Sacramento Valley in the way of extensions of old and construction of new steam and electric railroads, and strengthening of old levees to better protect lands already reclaimed, and construction of new levees to reclaim additional large areas of land, that the existence of the 1910 report and its adoption by an act of the legislature of the State of California, approved December 24, 1911, had led the many large interests engaged in development work to adopt the plan of the Commission as the approved plan for control of floods in the Sacramento Valley and its

tributaries, and that these large enterprises in the valley had been constructed or planned not only so as not to encroach upon the Commission's plans, but on the contrary to form a part of the works included in the Commission's plans. Thus it was found that much of the work planned by the Commission had already been done or arranged for by private enterprises, making it possible to eliminate much of the work and expense which had been contemplated in the Commission's 1910 report. The Commission's report of February 8, 1913, contained an estimate of \$11,717,008, as the total cost of the works necessary for the control of debris and floods and improvement of navigation in accordance with the plans contemplated in the 1910 report, after deducting from the 1910 estimates the works since constructed or projected in conformity therewith by private enterprises, and also after deducting the \$400,000 appropriated by congress June 25, 1910, and the \$400,000 appropriated by the legislature of the State of California. In connection with the estimate of \$11,717,008, the Commission expressed the opinion that one half of this amount is properly payable by each the United States and the State of California; provided, however, that all land required should be furnished without cost to the United States; and provided, also, that upon their completion all the flood-control works should be turned over to the State of California for maintenance.

The work about to be begun along the lower portion of Sacramento River with the two suction dredging plants, which are now practically completed, is a part of the work included in the 1910 and 1913 reports, toward which congress appropriated \$400,000 by act approved June 25, 1910, and toward which the legislature of California appropriated \$400,000 on March 1, 1909. The legislature of California has since, by act approved, June 7, 1913, appropriated \$200,000 additional, bringing the state's total appropriations up to \$600,000. The following is the latter act in full:

#### CHAPTER 452.

*An act to provide for the accomplishment of the work of the direct improvement of the navigation of the Sacramento, San Joaquin, and Feather rivers, of the State of California, as recommended in the special report of the California Debris Commission, dated June 30, 1907, and made jointly by Brigadier General A. Mackenzie, Chief of Engineers, C. H. McKinstry, major, Corps of Engineers, and Thos. H. Jackson, captain, Corps of Engineers, of the United States Army, and printed with the annual report of the Chief of Engineers of the United States Army for the fiscal year ending June 30, 1907, and making an appropriation for such work.*

[Approved June 7, 1913.]

*The people of the State of California do enact as follows:*

SECTION 1. The sum of two hundred thousand dollars is hereby appropriated out of any moneys in the state treasury not otherwise appropriated, which shall be available July 1, 1914, for the accomplishment of the work of the direct improvement of navigation of the Sacramento, San Joaquin, and Feather rivers, of the State of California, as recommended in the special report of the California Debris Commission, dated June 30, 1907, and made jointly by Brigadier General A. Mackenzie, Chief of Engineers, C. H. McKinstry, major, Corps of Engineers, and Thomas H. Jackson, captain, Corps of Engineers, of the United States Army, and printed with the annual report of the Chief of Engineers of the United States Army for the fiscal year ending June 30, 1907.

SEC. 2. The Governor of the State of California shall have charge and control of the expenditure of all moneys appropriated hereunder, and he is hereby authorized to enter into and to execute any contract or contracts with the United States Government, or any department thereof for the performance of the work, or any part thereof, provided for by this act, or to purchase materials, machinery, power, labor, or any other things necessary for such work, and generally to do any and all things necessary or proper to effectually carry into operation the work sought to be accomplished hereby.

SEC. 3. All contracts made hereunder shall provide specifically that only one half of the contract price of any work performed, or to be performed under this act, shall be paid by the state, and in case said work or any part thereof shall be performed in any other manner than by contract only one half of the expense of such work or of any matters incident thereto shall be paid by the state.

SEC. 4. This act shall become operative only upon condition that the government of the United States shall, under, by, and through the War Department, assume full charge and control of all work to be done as provided by this act, and also upon condition that a like sum of two hundred thousand dollars be appropriated by the United States for such work.

SEC. 5. The controller of the State of California is hereby authorized and directed, upon request of the Governor, to draw his warrant on the state treasurer from time to time and for such portion of said sum of two hundred thousand dollars and in favor of such person, corporation, or other parties as the Governor may designate, and the state treasurer is hereby directed and empowered to pay such warrants.

Under the terms of this state act the appropriation of \$200,000 does not in any event become available until July 1, 1914, and it becomes available then only upon condition that the Government of the United States shall, under, by, and through the War Department, assume full charge and control of all work to be done and also upon condition that a like sum of \$200,000 be appropriated by the United States for such work.

The \$400,000 appropriation made by the state March 1, 1909, provided that that sum should be deposited in the treasury of the United States, which was done. The act of congress of June 25, 1910, authorized the treasurer of the United States to receive the same and also reappropriated it for the work referred to in the acts. The state act of June 7, 1913, does not provide that the \$200,000 appropriated by it shall be deposited with the treasurer of the United States, but, on the contrary, comprehends that the state shall pay one half of each account or bill of indebtedness incurred in carrying on the work. This is the method followed on the Yuba River work.

Should congress decide to authorize this additional work at this time the amount of United States funds that can be profitably expended on this work in fiscal year ending June 30, 1915, exclusive of the balance unexpended July 1, 1913, is \$50,000. This is the additional amount needed to avoid a complete suspension before the close of the fiscal year ending June 30, 1915, of the work of increasing the flood carrying capacity of the Sacramento River near its mouth, as shown on sheet E of maps printed with House Document No. 81, sixty-second congress, first session. It is recommended, however, that the full amount (\$200,000) to be appropriated by the United States be made available at one time, on account of the stipulation in the act of the state legislature of June 7, 1913, appropriating \$200,000 for the work, that the state's appropriation is made "upon condition that a like sum of \$200,000 be appropriated by the United States for such work."

The interests of navigation, the problem of flood control, and the control and disposition of mine debris in and along the Sacramento and San Joaquin rivers and their tributaries are all inseparably connected. More extended information on these subjects may be found in the executive documents and annual reports referred to at page 1286 of the Annual Report of the Chief of Engineers for 1912, in House Document No. 751, sixty-second congress, second session, and in the report of the California Debris Commission to the Chief of Engineers of February 8, 1913, submitted consequent to the above-quoted resolution of the Committee on Rivers and Harbors of the House of Representatives of December 2, 1912.

The members of the commission during the past fiscal year were the following officers of the Corps of Engineers, United States Army: Lieut. Col. Thomas H. Rees, Lieut. Col. C. H. McKinstry, and Major S. A. Cheney.

*Appropriation for expenses of California Debris Commission, 1913.*

August 24, 1912, amount appropriated by act of congress approved August 24, 1912	\$15,000 00

July 1, 1913, amount covered by uncompleted contracts	\$1,500 00
Amount (estimated) required to be appropriated for completion of existing project, indeterminate (See Appendix ZZ.)	

## APPENDIX ZZ.

## ANNUAL REPORT OF THE CALIFORNIA DEBRIS COMMISSION FOR THE FISCAL YEAR ENDING JUNE 30, 1913.

## CALIFORNIA DEBRIS COMMISSION,

SAN FRANCISCO, CAL., July 1, 1913.

SIR: The California Debris Commission submits the following annual report for the fiscal year ending June 30, 1913:

## REGULATION OF HYDRAULIC MINING AND PLANS FOR IMPROVEMENT AND PROTECTION OF RIVERS AND CONTROL OF FLOOD WATERS AND MINE DEBRIS.

*Regulation of hydraulic mining in the drainage areas of the Sacramento and San Joaquin River systems.* During the fiscal year the commission received eight applications for permits to mine by the hydraulic process under the provisions of the act of congress approved March 1, 1893, as amended by the act approved February 27, 1907.

During the same period three permits to mine by the hydraulic process were granted, the applicants in these cases having constructed the necessary dams or barriers to impound the debris resulting from their mining operations so as to prevent it from reaching the navigable streams.

As in former years, numerous personal inspections were made of the hydraulic mining region and of mines and their works for impounding debris. During the

year legal proceedings instituted in previous years in a number of cases of illegal hydraulic mining operations were brought to a conclusion in the United States court, fines being assessed by the court in all such cases.

*Plans for improvement and protection of rivers and control of flood waters and mine debris.* Under the provisions of the act of congress approved March 1, 1893, the Commission is required to mature and adopt such plans from examinations and surveys already made, and from such additional examinations and surveys as may be deemed necessary as will improve the navigability of all the streams comprising the Sacramento and San Joaquin river systems, deepen their channels, and protect their banks, such plans to be matured with the view of making the same effective as against the encroachment of and damage from debris resulting from mining operations, natural erosion, floods, and other causes. Several surveys were made during the past year in the Sacramento Valley to obtain data needed in formulating plans for these purposes, and many meetings were held at which the numerous problems involved were considered and discussed with persons and representatives of corporations interested in transportation, reclamation, irrigation, flood control, and mining.

The expenditures during the fiscal year ending June 30, 1913, for regulating hydraulic mining and making examinations and surveys for improvement of navigation, control, and disposition of mine debris, and control of flood waters amounted to \$9,201.45.

The work proposed during the fiscal year ending June 30, 1914, with the \$15,000 appropriated by the act of congress of June 23, 1913, is as follows:

Making examinations and surveys for improvement of navigation, control and disposition of mine debris and control of flood waters:	
In drainage area of San Joaquin River.....	\$11,500 00
In drainage area of Sacramento River.....	2,500 00
	<hr/>
	\$14,000 00
Regulating hydraulic mining in the drainage area of the Sacramento and San Joaquin rivers .....	1 000 00
	<hr/>
Total .....	\$15,000 00
Amount (estimated) required for expenses of California Debris Commission during the fiscal year ending June 30, 1915, in regulating hydraulic mining operations, making examinations and surveys for improvement of navigation, control and disposition of mine debris and control of flood waters in the drainage areas of the Sacramento and San Joaquin river systems, as required by the act of congress approved March 1, 1893.....	\$15,000 00

#### STORAGE OF MINE DEBRIS IN YUBA RIVER, CALIFORNIA.

The operations during the past year under the general project for storing mine debris in Yuba River, under appropriations made by congress and the legislature of the State of California, have been as follows:

*Training walls.* The work of constructing the gravel embankments (referred to at pages 2929-2930 of the annual report of 1911) by means of gold dredges to confine and control the flow of Yuba River in the vicinity of Daguerre Point about 10 miles above Marysville, under agreement with W. P. Hammon and associates, was continued.

*Survey, Parks Bar bridge to Feather River.* During the past fiscal year a survey was made of the Yuba River from Parks Bar bridge down to its mouth in Feather River, a distance of 18 miles. This survey was made to determine the extent of the debris movement that has occurred since preceding surveys were made, and to furnish the information necessary for planning further works.

Comparison of this survey with that of 1906 shows that the great movement of debris into the lower Yuba River from the mountain sections, which it was estimated much greater during preceding years, has practically ceased. Since 1906 the two amounted to a fill of 18,000,000 cubic yards between 1899 and 1906, and which was largest floods, during the period within which reliable records have been kept, occurred. Considerable local movement of debris in the bed of the lower river has taken place. This has been greatly lessened by the Daguerre Point barrier

checking the movement from above, and by the training wall and by the clearing of timber to encourage the formation of a stable channel of sufficient capacity to pass the floods.

Surveys and observations made during the year give grounds for the belief that the rivers in the district are gradually working out of the unfavorable condition arising from the enormous amount of debris thrown into them during the period of unrestricted hydraulic mining.

Cross-sections of the Yuba River bottoms, from The Narrows near Smartsville to the mouth at Marysville, made during the fall of 1912, when compared with the survey of this area made in 1906, while showing cut in some sections and fill in others, attributable to certain causes, such as the turning of the river through the Daguerre Point cut, the extension of the training walls below Daguerre Point, a break in the Linda (south) levee and the clearing of brush along the main channel, indicate that taken as a whole, there has been a slight reduction in the total amount of debris in the area considered and that the river is cutting down through the debris deposits below Daguerre Point into a fairly deep and permanent channel.

The Feather River from the mouth of the Yuba, at Marysville, to its junction with the Sacramento, at Vernon, is still heavily charged with sand, which appears to be coming down faster than the Sacramento can take care of it. Last summer a bar with less than three feet of water on it formed quite across the Sacramento at the mouth of the Feather, where our surveys of 1907 showed an ample channel over 20 feet deep. This latter condition probably resulted from breaks in the levees that occurred shortly before the 1907 survey was made, and the present condition may be attributed to the extreme low flow obtaining in Sacramento River during the summer of 1912. A similar effect was noticed below the mouth of the American River last summer, and dredging was necessary there, as well as at the mouth of the Feather, to maintain the project depth of 4 feet. Even lower stages are indicated for the present summer (1913), and considerable work will be necessary to maintain the channel between Sacramento and the mouth of the Feather.

In spite of the low flow last year, less difficulty than usual was experienced in navigating up to Sacramento, although some dredging was necessary immediately below the city to maintain the 7-foot channel.

The Weather Bureau gauge at Sacramento showed the lowest reading (4.1 feet) that has been noted for over forty years. This was not entirely due to the low discharge for lower discharges have occurred in this period, but rather to the fact that the river bed is working down to the condition obtaining before the days of unrestricted hydraulic mining. The following table of average low water readings at Sacramento, by five-year periods, compiled from such data as are available, will serve to indicate the effect of mine debris on the river stages at this point:

*Average low water at Sacramento for five-year periods, 1849-1912.*

	Feet
Average gauge reading:	
1849-1853, five observed years.....	0.6
1854-1858, five observed years.....	1.2
1859-1863, three observed years.....	2.2
1862-1873, no records.....	
1874-1878, five observed years.....	5.5
1879-1883, five observed years.....	6.5
1884-1888, five observed years.....	7.3
1889-1893, four observed years.....	7.8
1894-1898, five observed years.....	8.0
1899-1903, five observed years.....	7.2
1904-1908, five observed years.....	6.8
1909-1912, four observed years.....	5.1

The records indicate that the water reached zero on this gauge in 1849 and again in 1856. The peak of the debris effect appears to have been reached in 1896 at a reading of 8.5, although in 1890 a reading of 9.3 occurred. Over a foot of tide was noted during low-water stages last summer.

*Inlet wall at Daguerre Point Cut.* In 1903-1906 a cut involving the removal of 634,207 cubic yards of earth and rock, was excavated through Daguerre Point on the approximate lines shown on sheet A, printed with House Document No. 431, fifty-sixth congress, first session. The dimensions of the cut, etc., as completed, were given in the annual report of the Chief of Engineers for 1904, pages 3705-3706. In 1905 and 1906 a concrete inlet wall, with the necessary abutments, was constructed across this cut. A photograph of this wall as completed in 1906, and plans of it, marked "Appendix B," precede page 2079 of the annual report for 1906. For several years prior to 1911 the work of throwing up a dam of gravel and cobbles, extending entirely across the channel of Yuba River in the vicinity of Daguerre Point, to force the entire flow of the stream through the cut excavated through Daguerre Point, had been in progress. This dam of gravel and cobbles was thrown up by gold dredges operating in the vicinity. It was constructed approximately along the line of the structure marked "Daguerre barrier," sheet A, above referred to.

The diversion of the river through the cut was accomplished during the summer of 1910, and since that time the full flow of the stream has passed over the inlet wall in the cut. The construction of these works resulted in impounding in the Yuba River above them many million cubic yards of mine debris, thus preventing the debris from reaching the Sacramento and Feather rivers below to the detriment of navigation in these streams.

At high water more or less sand and gravel is carried over the inlet wall, causing erosion of its concrete surface. This erosion has continued since 1910 until about 50 per cent of the surface has been worn down from 1 to 3 inches, and numerous pockets 4 to 6 inches deep have developed. Plans and specifications have recently been prepared for raising the inlet wall and facing it with timber. Erosion tests were made on samples of oak, maple, eucalyptus, and Oregon pine, which indicated that the resistance to erosion of the harder woods was not in proportion to their higher cost in this locality. These tests demonstrated that, service and cost considered, Oregon pine is the most suitable material for the proposed timber facing, and the plans and specifications were therefore made to provide for the use of that kind of timber.

This proposed work will raise the effective height of the inlet wall about 16 inches and add approximately 3,000,000 cubic yards to the storage capacity for mine debris produced by the Daguerre Point barrier.

It is proposed to invite bids for this work at once and complete it, if practicable, before the high-water season of 1913-14.

The expenditures during the year were as follows:

Survey, Parks Bar Bridge to Feather River.....	\$3,484 66
Plans for raising the inlet wall at Daguerre Point Cut.....	545 06
Total .....	\$4,029 72
Amount (one half) paid by the State of California.....	2,014 86
Balance (one half) paid by the United States.....	\$2,014 86

The work proposed during the fiscal year ending June 30, 1914, consists of raising the inlet wall in Daguerre Point Cut and facing it with timber, at an estimated cost of \$15,000, one half of which amount is payable by the United States and one half by the State of California. It is also proposed to continue the work of constructing gravel embankments by means of gold dredges under agreements with W. P. Hannon and associates.

These embankments are being constructed without cost to the United States and State of California; no expenditure of government funds or state funds on them are involved.

*Appropriations by Congress.*

June 3, 1896 -----	\$250,000 00
June 13, 1902 -----	150,000 00
	<hr/> 400,000 00
Received from sales -----	28,279 48
	<hr/>
Total -----	428,279 48

GENERAL PROJECT FOR CONTROL OF DEBRIS AND FLOODS IN THE SACRAMENTO AND  
FEATHER RIVERS.

The scope of this project is set forth under the above heading in the summary of this report.

The operations during the past fiscal year have been as follows:

*Constructing and equipping dredging plants.* The construction of the two 20-inch suction dredges "Sacramento" and "San Joaquin," began in the previous year under contract with the Ellicott Machine Company, of Baltimore, Md., dated January 22, 1912, was continued during the past year. The material for these dredges was assembled at Baltimore, Md., shipped to Pittsburg, Cal., and erected at the latter place. The dredges were practically completed at the close of the fiscal year, but they had not been given the thirty days' trial required by the contract. This trial is being held in abeyance pending the completion by the contractor of some minor changes found necessary during the preliminary trial of the dredges. It is anticipated that these changes will be completed in August, 1913, and that the thirty days' trial may immediately follow.

Proposals for furnishing and delivering at Rio Vista, Cal., 20-inch diameter steel and wooden discharge pipe and two welded steel elbows for the two dredges were invited by advertisement dated August 8, 1912, and opened on September 9, 1912. Proposals were invited for three lots of pipe. Lot No. 1 consisted of 2,408 linear feet of welded steel pipe and two welded steel 90° elbows. The proposal of George J. Henry, Jr., of San Francisco, Cal., was accepted for lot No. 1, and a contract therefor was entered into with him on October 16, 1912. This contract was completed during the year.

Lot No. 2 consisted of 2,500 linear feet of riveted steel pipe. The proposal of the Schaw-Batcher Company Pipe Works, of Sacramento, Cal., was accepted for lot No. 2, and a contract therefor was entered into with that company on October 18, 1912. This contract was completed during the year.

Lot No. 3 consisted of 2,500 linear feet of wooden stave pipe. The proposal of the Pacific Tank and Pipe Company of San Francisco, Cal., was accepted for lot No. 3, and a contract therefor was entered into with that company in October, 1912. This contract was completed during the year. It having been found that more wooden stave pipe could be used to advantage, 2,516 additional linear feet were purchased under oral agreement of the Pacific Tank and Pipe Company, at the price named in their contract for the 2,500 linear feet comprising lot No. 3, above referred to. The delivery of the additional 2,516 feet of pipe was completed during the past year.

Proposals for furnishing and delivering at Rio Vista, Cal., 68 pontoons for the pipe lines of the two suction dredges were invited by advertisement dated October 8, 1912, and opened on November 7, 1912. The proposal of Johnson and Lanteri, of Pittsburg, Cal., was accepted, and a contract for the pontoons entered into November 29, 1912. This contract was completed during the year.

In addition to the foregoing the dredges were partially equipped during the year with all the necessary furnishings. The latter were purchased after inviting proposals by circulars and by oral agreement.

*Motor dredge tender "Rio Vista."* On November 26, 1912, proposals were invited for the construction of motor dredge tender "Rio Vista," for use in connection with dredges "Sacramento" and "San Joaquin." The proposals were opened on December 16, 1912. The proposal of Nunes Bros., of Sacramento, Cal., for constructing the hull of the dredge tender was accepted, and a contract therefor was entered into on December 31, 1912. This contract was nearing completion at the end of the year.

The proposal of the Atlas Gas Engine Company, of Oakland, Cal., for furnishing and installing the engines and accessories in the hull of the dredge tender was accepted, and a contract therefor was entered into December 31, 1912. This contract was nearing completion at the end of the year.

*Storehouse and mooring grounds at Rio Vista.* For carrying on the operations under this project a storehouse is necessary. In former years United States snagboat "Seizer" and other floating plant belonging to the Sacramento River work were moored, when out of commission, along the water front at Sacramento. This water front having become crowded with river craft, it became necessary to moor the government plant referred to, when out of commission, elsewhere. Rio Vista was selected as the most suitable location for this purpose. In addition to being convenient for all the Sacramento River work, it is also centrally located for the San Joaquin and Mokelumne River work. To meet the requirements of all these works a storehouse and wharf was constructed and mooring grounds prepared by hired labor at Rio Vista during the past year, the cost being defrayed from the appropriations properly chargeable therewith. This wharf is 120 feet long by 44 feet wide, including the space occupied by the storehouse, which latter is 56 feet long by 26 feet wide.

*Lands.* Title to or easements over approximately 2,260½ acres of land were acquired during the past year under the requirement of the act of congress of June 25, 1910, that rights of way needed for levees and spoil banks for this work should be furnished the United States free of cost.

*Surveys of lands.* Several surveys were made during the year of the lands required for the work and to lay out the lines of the work to be done under the project.

The expenditures during the year from the appropriation made by congress were \$268,276.18, and from the funds contributed by the State of California \$17,490.93, or a total of \$285,767.11. These expenditures were as follows:

For	From appropriation by congress	From appropriation by State of California	Total
Construction and equipment of suction dredges "Sacramento" and "San Joaquin," including pontoons and pipe for pipe lines.....	\$261,847 28	\$13,720 00	\$275,567 28
Construction and equipment of dredge tender "Rio Vista".....	2,699 76	3,150 91	5,850 67
Storehouse and wharf at Rio Vista, Cal.....	1,716 96	582 49	2,299 45
Survey of lands.....	2,012 18	37 53	2,049 71
<b>Totals</b> .....	<b>\$268,276 18</b>	<b>\$17,490 93</b>	<b>\$285,767 11</b>

The work proposed during the fiscal year ending June 30, 1914, is as follows:

Completion of and equipment for suction dredges "Sacramento" and "San Joaquin".....	\$15,000 00
Completion of and equipment for dredge tender "Rio Vista".....	5,500 00
Completion of storehouse and wharf at Rio Vista, Cal.....	800 00
Operating two suction dredging plants August 1, 1913, to June 30, 1914, eleven months at \$7,500 each per month.....	165,000 00
<b>Total</b> .....	<b>\$186,300 00</b>

*Estimate of Additional Funds Required.*

Amount that can be profitably expended in fiscal year ending June 30, 1915, for works of improvement.....	<sup>1</sup> \$200,000 00
Appropriations by congress, act of June 25, 1910.....	400,000 00

# ANNUAL REPORT OF THE CALIFORNIA DEBRIS COMMISSION FOR THE FISCAL YEAR ENDING JUNE 30, 1914.

CALIFORNIA DEBRIS COMMISSION,  
SAN FRANCISCO, CAL., July 1, 1914.

SIR: The California Debris Commission submits the following annual report for the fiscal year ending June 30, 1914:

## REGULATION OF HYDRAULIC MINING AND PLANS FOR IMPROVEMENT AND PROTECTION OF RIVERS AND CONTROL OF FLOOD WATERS AND MINE DEBRIS.

*Regulation of hydraulic mining in the drainage areas of the Sacramento and San Joaquin River system.* During the fiscal year the Commission received two applications for permits to mine by the hydraulic process under the provisions of the act of congress approved March 1, 1893, as amended by the act approved February 27, 1907.

During the same period one permit to mine by the hydraulic process was granted, the applicant having constructed the necessary dam to impound the debris resulting from the mining operations so as to prevent it from reaching the navigable streams. As in former years, numerous personal inspections were made of the hydraulic mining region and of mines and their works for impounding debris.

*Plans for improvement and protection of rivers and control of flood waters and mine debris.* Under the provisions of the act of congress approved March 1, 1893, the Commission is required to mature and adopt such plans from examinations and surveys as may be deemed necessary to improve the navigability of all the streams comprising the Sacramento and San Joaquin River systems, deepen their channels, and protect their banks, such plans to be matured with the view of making the same effective as against the encroachment of and damage from debris resulting from mining operations, natural erosion, floods, and other causes. Several surveys were made during the past year in the Sacramento and San Joaquin valleys to obtain data needed in formulating plans for these purposes, and many meetings were held at which the numerous problems involved were considered and discussed with individuals, representatives of the State of California and corporations interested in transportation, reclamation, irrigation, flood control, and mining.

The expenditures during the fiscal year ending June 30, 1914, for regulating hydraulic mining and making examinations and surveys for improvement of navigation, control and disposition of mine debris, and control of flood waters were as follows:

Surveys of portions of San Joaquin River.....	\$10,899 30
Survey of portion of Mokelumne River.....	1,199 63
Regulating hydraulic mining, examinations, surveys, plans for control and disposition of mine debris and control of flood waters in the drainage areas of the Sacramento and San Joaquin river systems .....	2,095 80
Total .....	\$14,194 73

## STORAGE OF MINE DEBRIS IN YUBA RIVER, CAL.

The operations during the past year under the general project for storing mine debris in Yuba River, under appropriations made by congress and the legislature of the State of California, have been as follows:

*Training walls.* The work of constructing the gravel embankments (referred to at pages 2929-2930 of the annual report for 1911) by means of gold dredges to confine and control the flow of Yuba River in the vicinity of Daguerre Point, about ten miles above Marysville, under agreement with W. P. Hammon and associates, was continued. These embankments are being built for the United States and State of California in exchange for the right to extract gold from certain lands of the United States.

In spite of the low flow last year less difficulty than usual was experienced in navigating up to Sacramento, and no dredging was necessary immediately below the city to maintain the seven-foot channel.

The Weather Bureau gauge at Sacramento showed the lowest reading (2.5 feet) that has been noted for over forty years. This was not entirely due to the low discharge, for lower discharges have occurred in this period, but rather to the fact that the river bed is working down to the condition obtaining before the days of unrestricted hydraulic mining. The following table of average low-water readings at Sacramento, by five-year periods, compiled from such data as are available, will serve to indicate the effect of mine debris on the river stages at this point.

*Average low water at Sacramento for five-year periods, 1849-1913.*

Average gauge reading:

1849-1853, five observed years.....	0.6 feet
1854-1858, five observed years.....	1.2 feet
1859-1863, three observed years.....	2.2 feet
1862-1873, no records.....	
1874-1878, five observed years.....	5.5 feet
1879-1883, five observed years.....	6.5 feet
1884-1888, five observed years.....	7.3 feet
1889-1893, four observed years.....	7.8 feet
1894-1898, five observed years.....	8.0 feet
1899-1903, five observed years.....	7.2 feet
1904-1908, five observed years.....	6.8 feet
1909-1913, five observed years.....	4.7 feet

The records indicate that the water reached zero on this gauge in 1849 and again in 1856. The peak of the debris effect appears to have been reached in 1896 at a reading of 8.5, although in 1890 a reading of 9.3 occurred. Over 2 feet of tide was noted during low-water stages last summer.

*Inlet wall at Daguerre Point cut.* Proposals for raising the inlet wall and facing it with timber (see last annual report, page 3172) were invited by advertisement dated May 20, 1914. The proposals are to be opened on July 1, 1914.

The expenditures during the year were as follows:

For additional concrete placed in the apron of the inlet wall, and for plans and specifications for raising the inlet wall, at Daguerre Point cut.....	\$330 08
Amount (one half) paid by the State of California.....	315 04
Balance (one half) paid by the United States.....	315 04

APPROPRIATIONS BY CONGRESS.

June 3, 1896.....	\$250,000 00
June 13, 1902.....	150,000 00
Total.....	\$400,000 00
Received from sales.....	28,279 48
Total.....	\$428,279 48

In addition to the appropriations made by congress, the State of California has appropriated a total of \$400,000 for the Yuba River project.

GENERAL PROJECT FOR CONTROL OF DEBRIS AND FLOODS IN THE SACRAMENTO AND FEATHER RIVERS.

The scope of this project is set forth under the above heading in the summary of this report.

The operations during the past fiscal year have been as follows:

*Constructing and equipping dredging plants.* The construction of the two 20-inch suction dredges "Sacramento" and "San Joaquin," under contract with the Ellicott Machine Company, of Baltimore, Md., dated January 22, 1912, was completed during the past year, as was also motor dredge tender "Rio Vista," under contracts with Nunes Bros. and the Atlas Gas Engine Company, dated December 31, 1912. The expenditures during the year on account of original construction and original equipment of this plant were \$29,667.21.

This completed that part of the general project (report printed in the annual report of the Chief of Engineers for 1907, pages 2262-2269) which contemplated the construction of two hydraulic dredges.

*Increasing the flood carrying capacity of Sacramento River below Cache Slough.* Upon the completion of the two dredges and other plant above referred to, operations were begun on the work of channel enlargement necessary to increase the flood

carrying capacity of the Sacramento River below Cache Slough from 165,000 second feet to 600,000 second feet, as indicated on map (Sheet E) printed with House Document No. 81, sixty-second congress, first session. This involves the dredging of approximately 148,600,000 cubic yards of material (House Doc. No. 81, sixty-second congress, first session, page 21). Dredging operations were begun in Sacramento River a short distance above Collinsville in August, 1913, with suction dredges "San Joaquin" and "Sacramento," each with a crew of approximately 40 men. Up to June 30, 1914, dredge "San Joaquin" removed 1,823,049 cubic yards of material from the river, at a total cost of \$83,278.07, or 4.568 cents per cubic yard. This material was deposited on the west bank of the river above the flood plane. Up to June 30, 1914, dredge "Sacramento" removed 1,549,996 cubic yards of material from the river, at a total cost of \$84,758.40 or 5.4683 cents per cubic yard. Practically all the material dredged by the "Sacramento" was deposited on Sherman Island, where it was used in levee construction on the lower end of the island, and at Baker's Point opposite Toland's Landing. At page 39 of House Document No. 81, above referred to, this point was referred to as the one where the channel of the river is the most contracted.

Of the 1,549,996 cubic yards of material dredged from the flood channel of the river by dredge "Sacramento" the past year 1,347,383 cubic yards were placed in the levee at the lower end of Sherman Island. This levee is one mile in length. It is approximately 13 feet in height, 10 feet wide at the crest and 200 feet at the base. Work on this levee was begun in August, 1913, and completed in May, 1914. The cost of this levee work up to June 30, 1914, was \$22,233.27.

Of the 1,549,996 cubic yards of material dredged by dredge "Sacramento" the past year, 202,613 cubic yards were placed in the levee on Sherman Island at Baker's Point, opposite Toland's Landing. This levee is to be approximately 6,100 feet in length, 20 feet high, 10 feet wide at the crest and 400 feet at the base. Work on this levee was begun in May, 1914. The cost of this levee work up to June 30, 1914, was \$5,904.55.

The dredging and levees above referred to are in furtherance of the plan to increase the width and depth of the river between Collinsville and Cache Slough to full flood section, in accordance with paragraph 72, page 21 of the House Document No. 81, above referred to.

The total cost of all the work during the year was as follows:

Amount expended during the year.....	\$22,072 70
Outstanding liabilities at end of year.....	3,768 80
Total cost .....	\$25,841 50

The expenditures during the year from the appropriation made by congress were \$1.67, and from the funds contributed by the State of California \$222,071.03, or a total of \$222,072.70. These expenditures were as follows:

For	From appropriation by congress	From appropriation by State of California	Total
Completion and equipment of suction dredge "Sacramento," including pontoons and pipe for pipe lines.....	\$1 67	\$13,108 88	\$13,110 55
Completion and equipment of suction dredge "San Joaquin," including pontoons and pipe for pipe lines.....		11,866 83	11,866 83
Completion and equipment of dredge tender "Rio Vista".....		4,110 93	4,110 93
Completion of storehouse and wharf at Rio Vista, Cal.....		578 90	578 90
Dredging, by suction dredge "Sacramento".....		84,214 17	84,214 17
Dredging by suction dredge "San Joaquin".....		82,338 38	82,338 38
Construction of levee on lower Sherman Island.....		20,693 27	20,693 27
Construction of levee at Baker's Point, Sherman Island.....		5,159 67	5,159 67
Totals .....	\$1 67	\$222,071 36	\$222,072 70

*Appropriations by congress.*

Act of June 25, 1910.....\$400,000 00

*Appropriations by State of California.*

Appropriated by act of state legislature of March 1, 1909, and deposited in treasury  
of United States by the State of California on July 1, 1911.....\$400,000 00  
Received from treasury department settlements and miscellaneous collections.....764 85

Total, state fund .....\$400,764 85

Appropriated by act of state legislature of June 7, 1913 (conditional; see summary  
of this report for the provisions of this state appropriation).....\$200,000 00

*Abstract of contracts in force.*

Name of contractor	For	Price	Date of approval	Date of beginning work	Date of expiration
Nunes Bros., Sacramento, Cal.	Hull for dredge tender "Rio Vista."	\$4,625 -----	1913 Jan. 23	1913 Feb. 16	1913 July 6
Atlas Gas Engine Co., Oakland, Cal.	Engine for dredge tender "Rio Vista."	\$4,575 -----	Jan. 23	Feb. 16	July 6 1914
Pacific States Refineries, San Francisco, Cal.	Machinery oil -----	8 $\frac{3}{4}$ ¢ per gallon..	1	May 11	May 1

	Engine distillate at Pittsburg, Cal.	6 $\frac{1}{2}$ ¢ per gallon			1914 Aug. 10

<sup>1</sup>Emergency contract.

Respectfully submitted,

(Signed) THOS. H. REES,  
Lieut. Col. Corps of Engineers.

(Signed) R. R. RAYMOND,  
Major, Corps of Engineers.

(Signed) S. A. CHENEY,  
Major, Corps of Engineers.

The Chief of Engineers, United States Army.

### RIVER WORK.

Among the duties prescribed for the Department of Engineering by the statutes, the law creating it recites that:

All matters of drainage, and improving and rectifying river channels and other work on any river or slough flowing into San Francisco Bay, San Pablo Bay, and Suisun Bay, and also the tide waters flowing into said bays, shall be placed under the management and control of the Department of Engineering whenever the law provides therefor. The Department of Engineering shall have charge of all expenditures, unless otherwise provided by law, for all public works relating to general river and harbor improvements, including reclamation and drainage of lands. It may purchase, construct, and operate one or more dredges, or any other needed appliances to promote or properly carry out the work of the department. The State Engineer, in the name of the State of California, may obtain or condemn any right of way necessary for any construction herein named, and shall proceed, if necessary, to condemn under the terms of the Code of Civil Procedure relating to such proceedings. The department shall have the power to employ such additional help for the performance of the work of this section as the Advisory Board shall order, and all money now appropriated to the Board of Public Works and remaining unexpended, shall be used for the purposes intended by the law, by the Department of Engineering, and the State Controller shall transfer said funds to the credit of the Department of Engineering. Wherever under any statutes of this State any duty or obligation, the performance of which is imposed upon the Commissioner of Public Works, or the auditing board to the Commissioner of Public Works, the same shall be assumed and the performance of the same shall devolve upon the Department of Engineering.

By virtue of the foregoing provision of the law, the Department of Engineering succeeded to the duties of the Commissioner of Public Works, who had formerly had charge of all state work in the interest of navigation on the inland waters of California.

The first appropriation for this purpose was made by the legislature in 1897, when \$300,000 was appropriated for the purpose of "rectifying and improving the channels of Sacramento, San Joaquin and Feather rivers and such other channels of the state as may be determined and to improve the navigability of said streams." A study of river conditions and a system of channel regulation was then inaugurated.

Further appropriations were made from time to time and continued after the Department of Engineering was created in 1907 and took over the work of the Commissioner of Public Works.

In the opening chapter of this report the functions of the consulting board to the Department of Engineering are stated. All applications for state aid in works affecting the rivers is referred to this board for consideration.

Wherever proposed work in the interests of navigation and the control and maintenance of stable conditions of the rivers involves also direct benefits or protection to the lands seeking to have the work done, it has been the policy of the consulting board to recommend the work done by the state, provided the property interests to be directly benefited shall pay one half, or more than half, of the cost of the work.

In all of the original work undertaken during the past two years this rule has been adhered to excepting where stated in the description of the same.

No floods have occurred in the Sacramento watershed since 1909, although each spring rise has furnished sufficient water to flow out through the breaks and over low banks without levees. Therefore, no new crevasses have occurred in the levees, and low water navigation in the Sacramento River has been unusually free from serious interference.

In many places, however, serious caving of the banks has developed. Several applications have been made for state aid in arresting the bank erosions. Where it was considered that danger existed of the river breaking through the bank and making crevasses or new channels, and the property owners were willing to pay at least half of the cost for protection work, it has been afforded. Many applications for assistance have been made, however, where the washing away of the land is a serious loss to the land owner, but does not appear to threaten the integrity of the stream or endanger navigation. In such cases, the law not permitting the expenditure of state funds, the applications were regretfully rejected.

### SACRAMENTO RIVER.

*Crouch Landing.*—The bank at this point has been washing away for several years until the shore line has moved 300 or 400 feet inland. Several thousand dollars have been expended by the government, the state and the property owners in works to arrest it, but the last high water washed away all that had been constructed.

A survey was made for a cut-off across the arc of the bend, but the cost of the cut would be so great and its utility being doubtful, it was abandoned. It is believed that bank protection, if well done, will most effectually remedy the evils, and for this purpose plans have been prepared to place concrete protection along 1,500 to 1,800 feet of bank.

For this purpose the advisory board has authorized the expenditure of \$15,000 provided the property owners shall pay one half. Owing to

the lateness of the season and likelihood of high water coming before it can be finished, which would probably destroy all that had been laid, the work will not be undertaken until next summer.

*Meridian.*—The banks here are caving badly and present a serious condition. Should erosion continue much farther there is danger of a break being made into Sutter Basin with attendant great loss of property and injury to navigation. There are many interests involved and at the present writing they have not been able to unite so as to pledge their share of the expense of protective works.

*Grimes.*—Extensive bank protection had been constructed at this landing some years ago. Some of it had become damaged and other work was required to further protect the bank. Property owners deposited the required funds to cover half the cost of the work, which was completed in the early summer.

*Collins Eddy.*—Conditions at this point have been growing worse every year for some time. The eddy is at the apex of a very sharp bend which is becoming more accentuated each season, until now it is very difficult for a steamer going up with a heavy tow to make the turn.

The erosion has taken nearly half of the levee at one point, and weakened it so that but little more caving will destroy it. The land slopes very rapidly from here toward Sutter Basin and should a breach occur, which seems imminent at the next high water, a serious condition would result. Property would be destroyed, land damaged, and the division of the stream would injure the main river below, entailing a large expense to close the break.

The United States engineers and the Department of Engineering agreed upon a type of work to be constructed and the division of expense, whereupon the property owners agreed to contribute a share to the cost.

The type of work designed is a pile and brush bulkhead about 1,000 feet in length, to cost \$8,000. The federal government agreed to furnish and drive the piles, and some other work to the extent of \$2,000. The property owners deposited \$3,000 with the State Engineer. The work will begin at once and should be completed before winter rains set in.

*Tisdale Weir.*—The channel approach to the weir had become filled with growing brush, which collected a large amount of drift. A great number of large logs had lodged under and against the county highway bridge just above the weir.

The accumulation of drift had caused holes to be washed at the upstream side of the structure. The surfacing of the weir crest is badly cracked and scales off in large areas.

Plate XXI—A. Bank Protection—Articulated Concrete Revetment.

B. River Work, Construction Camp.

During the past summer, the channel was cleared of brush; the drifts cut up and burned; the holes filled with hard material and the broken surface of the concrete patched, placing the weir in good condition for another season.

*Knights Landing.*—Pile bulkheads put in here several years ago have become dilapidated. The advisory board authorized repairs to be made, which will be done with the equipment used at Collins Eddy.

*Elkhorn Weir.*—The channel way from the weir, as well as the space in front of the weir becomes overgrown with brush, which interferes with its functions and requires to be cleared periodically. Much clearing is done in cutting brush for bank protection along the river, but in 1912 and 1913 there was so little brush used that it became necessary in 1913 to clear the waterway, which was done at a cost of \$1,400.

*Rock Point.*—This is a place that has always given much concern, being situated in a position where it is attacked by the current of Sacramento River reinforced by the American, and with the streets and buildings of the town of Washington in the line of destruction should a break occur presents a serious condition.

It is estimated that adequate protection will cost \$15,000. The department suggests that the property owners should pay two thirds and the state one third of the cost. At this writing the people concerned have not reached an agreement.

*Edwards Break.*—This place is a short distance below the city of Sacramento. A break occurred here in 1904 which entailed a loss of probably a million of dollars. The flood waters of the river poured through the break for many weeks inundating the whole Sacramento basin to the Mokelumne River, causing that stream to overflow its contiguous territory. The waters backed into the city of Sacramento, requiring constant diligence on the part of the city to prevent a break in the Y street levee. The break was not closed until several months had elapsed, and it is said the cost to some of the lands affected exceeded \$100 an acre, besides much damage and loss of crops. Conditions in the vicinity of the Edwards break have been unsatisfactory for some years. Several thousand lineal feet of brush mattress have been laid to arrest the erosion of the banks and levees.

While these mattresses afford an excellent protection, their life is short. The brush soon decays and when the water recedes in summer the brush becomes dry and is easily burned. Much of that laid in the vicinity under discussion has been destroyed by fire. Much of the land in the city limits which was only farms at the time of the break ten years ago has been annexed to the city and is closely built up with urban homes with improved streets.

Conditions along the levee were becoming alarming, and in view of the importance of the territory threatened it was considered that a more permanent type of work should be introduced.

Reclamation District No. 535, which lies along the river front and extends back to high land, presented a plan for revetting the face of the levee with a flexible concrete pavement. The cost of the work was estimated at \$75,000, which the district officers declare was beyond the resources of the district and asked for assistance from the state.

The advisory board authorized the cooperative expenditure of \$75,000 and work is now in progress, and should be completed before high water arrives.

*Freeport.*—Bank erosion here has been exceedingly troublesome. Negotiations were pending at the time of the last report for cooperative action to place protecting work, but without avail. A county road runs on top of the levee, and during 1913 the erosion progressed so far as to destroy the road in places, and threatened to continue through the levee. The department cooperated with the county of Sacramento and some of the property owners in applying protection to the worst places. The state's share of the cost of this work was \$1,000.

*Brannan Island.*—Some old work along the Sacramento shore of this island had become badly dilapidated. Repairs to this and some new mattress work, as well as replanting willows on some old mattress was executed in cooperation with the land owners to the extent of more than \$5,000.

*Sherman Island.*—Most of the former work on the shore of this island has stood well. Three-mile Slough is a branch of Sacramento River between Sherman and Brannan islands, emptying into the San Joaquin River opposite Jersey Island. About half a mile from the head the slough turns abruptly to the left, and the swirling waters have washed out a deep pool which has a tendency to constantly work inland.

Several years ago a bulkhead of piles and brush was constructed here to stop the erosion. The depth of water is more than fifty feet and the bottom is hardpan so that piles can not be driven with sufficient penetration to make them secure. Owing to the swift and whirling current passing steamers and barges are sometimes thrown against the bulkhead with great force, breaking the piles or loosening them. For this reason annual repairs are necessary. During the last two years repairs have been made in cooperation with the trustees of Reclamation District No. 341.

*Sacramento City.*—Along the Merkeley levee below the city of Sacramento the state some years ago revetted a considerable length of the levee. Later this territory was annexed to the city and extensive shore improvements were undertaken. The rise of the river last spring came

before the work was completed and some of it was destroyed. The department cooperated with the city in repairing the damaged revetment to the extent of \$5,000 of state funds.

### FEATHER RIVER.

It was stated in a preceding chapter that Feather River is subject to a constant influx of sand from the mining debris lodged in the channel and basins of Yuba River, and that fifteen years ago the federal authorities had ceased to do any snagging or other work in aid of navigation upon this stream. As a consequence of these conditions the channel had become full of snags and greatly choked by shifting sand bars so that steamboats had ceased trying to reach Marysville excepting during high water.

The city of Marysville enjoyed "terminal rates" on freight from outside the state owing to those rates having been established before the steamers had withdrawn from the Feather River. In fear that the Interstate Commerce Commission would cancel these favorable rates, the civic bodies of Marysville petitioned the Department of Engineering to endeavor to restore navigable conditions on the river.

Surveys were made and the advisory board authorized the expenditure of \$7,000 for snagging and other work, and \$10,500 to make a cutoff across Nelson bend, provided the adjoining property owners should cooperate in the latter work.

During the summer of 1913 the department removed and destroyed more than 1,000 snags from the channel of the river, and a system of training walls was inaugurated to produce deeper water at the shoals.

The quantity of sand in Feather River below the mouth of the Yuba is so great that when the flood flow falls below the transporting velocity, innumerable sand bars form.

Where the current follows along the side of the channel, particularly in the concave side of a curve, there is usually a good depth, even during the low summer flow, but where the current crosses to the opposite side the water spreads in a broad, shallow sheet across the intervening bar.

It is requisite that no structures placed in the channel shall offer any obstruction to the free flow of flood waters, therefore training works must be low—no higher than the surface of low water.

The method adopted for causing the water to increase in depth at the "crossings" is to construct wattles made of green brush woven between stakes driven down to the water's surface. The wattles are constructed in lines approximately parallel with the axis of the river but diagonally with the crossing current, so as to confine some of the spreading water to narrower limits. They have proven quite effective in causing the water to quickly scour channels deep enough for light draft boats to

negotiate the crossings from one pool to another. While they are not permanent in character and are liable to be washed out with the next high water, that is not of much moment, since the shifting bars are likely to transfer the place of need to another location the next season. They are cheaply made, serve their purpose for the season and do not obstruct the flood flow nor interfere with boats passing over them as soon as they are sufficiently submerged.

When the work began on Feather River the city of Marysville donated equipment worth about \$1,500 and with the state funds allotted, several thousand feet of these little "training walls" were constructed. The effect of the work done on the river in removing snags, including two dams in a cut-off across Eliza bend, and deepening crossings was to enable a steamer to make weekly trips to Marysville until June, 1913.

A contract was let to the owners of land adjoining Nelson bend to dredge a cut across the bend for the sum of \$10,500. The dredged material was used in constructing a strong levee along the bank of the cut. The cost to the contractor was considerably more than \$21,000, and the cut eliminates a very bad turn in the bend.

During the summer just passed, some of the training walls were repaired or restored and others constructed, snags were removed and the land along Nelson bend cut-off cleared for an additional width of 100 feet.

The work in the river it is confidently believed is having a beneficial effect, as boats were able to go several miles up the stream and bring out cargoes of beans, etc., during the fall and in November a steamer took a load of goods to Marysville. This had not been possible before in a quarter of a century.

It is expected to continue the work next year, and it is hoped to be able to demonstrate that navigation can be maintained in the Feather River at small cost.

### SAN JOAQUIN RIVER.

No work has been done on this stream below Stockton during the period just closed, though a small amount is provided for.

In 1913 application was made for the department to undertake extensive work in rectifying the channel of Middle River. The legislature had just enacted a law including flood control and reclamation on the San Joaquin with the Sacramento Valley project.

It was believed that no work should be executed at public expense in the delta channels unless such work would be in harmony with the ultimate control of floods in those channels.

A survey of Middle River and of Old River was made from their origin to the crossing of the Santa Fe Railroad. It was found that both channels are in fact navigable part of the year excepting for fixed

highway bridges crossing them. It was concluded that more extensive surveys than was then advisable would be required to determine the extent of rectifying that might be done, so the application was temporarily laid aside.

The San Joaquin River is a sluggish stream carrying a great deal of sand, any breaks occurring in the banks to cause a division of the waters is sure to cause shoals and sand bars to form and impede navigation.

The amount of water traffic above Stockton is limited, and does not warrant a great expenditure to maintain navigable conditions, but should new channels be allowed to form they would draw off so much of the water that the navigable depth below Stockton would be reduced to such a degree as to seriously interfere with navigation to that city.

Until the investigations now being made shall develop a complete plan for flood control, reclamation and navigation throughout the system, the policy of the Department of Engineering should be to maintain conditions as they are; and with that object in view, the activities of the state along the San Joaquin River during the last two years has been confined to assisting the owners of property along the river to maintain their levees, and to install bank protection where dangerous conditions obtain.

*District No. 544.*—At the time of the report two years ago work was just being completed at the divergence of Old River from the San Joaquin, to arrest erosion of the levees that threatened a serious break. This work consisted of a flexible brush mattress and was constructed in cooperation with the district, the state paying half of the cost.

During 1913 slight repairs were made to the mattress and green stakes driven where the mattress brush had failed to grow. At this time additional repairs are being made to the work and a new mattress laid; the district paying one half the cost.

*District No. 17.*—A dangerous erosion of the bank and levee between the Southern Pacific railroad bridge and the head of Old River existed, and a mattress 1,250 feet long had just been placed at the close of the previous report. Repairs and replanting of growing willows was done in 1913 and at this writing the mattress is being repaired.

*Paradise Bend.*—The work in progress at this point two years ago was completed but the extension of the caving has necessitated new work and the department is now placing a mattress about 1,600 feet in length, the land owners cooperating in the expense.

*Banta Reclamation District.*—A short distance above the Western Pacific railroad bridge, a threatened break in the levee developed in 1914. A distance of about 1,300 feet being in need of protection, preparations were made to lay a mattress upon it. Work will begin very soon, the property owners to participate in the cost.

*Smith's Canal.*—At the entrance to the river of a short slough known by the foregoing name some pile protection work constructed several years ago has become badly dilapidated and the wave wash from passing steamers is eroding the levee badly. A protection 350 or 400 feet in length is required, and there being a large quantity of brickbats available at a nearby yard, it is proposed to pave the slope with loose brick as being a cheap and efficient protection.

The advisory board authorized the expenditure by the state of \$587.

### CALAVERAS RIVER.

The Calaveras River divides into two branches soon after debouching from the hills. One branch runs southwesterly and becomes known as Mormon Slough. It passes through the city of Stockton, joining San Joaquin River a mile below the city.

The other channel retaining the name of Calaveras runs more westerly, passes about two miles north of Stockton and enters the San Joaquin some three miles below the mouth of the Mormon Slough branch.

Floods in Mormon Slough inundated portions of Stockton and caused much inconvenience and damage, and a few years ago the government constructed a canal diverting Mormon Slough into Calaveras River three or four miles east of Stockton. Above the junction of the canal and river the levees along the latter are very weak or entirely lacking and the access of flood waters from Mormon Slough causes the Calaveras to flow over the banks or break the levees above.

The escaping water flows southwestward over the intervening plains until intercepted by the levees along the Calaveras and San Joaquin near their confluence. In its course it injures roads and interrupts and endangers travel thereon. State property at the farm of the Stockton State Hospital suffers great injury from these flood waters. In 1911 the waters accumulated against the levees on the farm and destroyed several acres of an orchard.

In 1912 the state in cooperation with the county of San Joaquin undertook to build a levee from the junction of the diverting canal upstream along the west bank of the Calaveras for about 4,000 feet, shutting off the worst overflow. The work was delayed, and was not completed before high water in the winter of 1913. The high water made two breaches in the levee.

In the summer of 1914 in cooperation with the county the state repaired the levee, raised and strengthened it, and cleared the channel of Calaveras River, so that conditions are now greatly improved at that point.

The foregoing constitutes the history of construction accomplished or undertaken since the last report in the navigable streams of the state

under the provisions of the act appropriating moneys for the "rectification and improvement of Sacramento, San Joaquin, and Feather rivers and the improvement of the navigability of said streams."

*Method of Work.*—Nearly all of the river work executed by the department is done by "force account." A camp is established at the site of each piece of work, and the men boarded at the camp. Care is exercised to keep the commissary up to a high standard, all foodstuffs being of the best quality and of good variety. Kitchen arrangements are complete and convenient, and cooking is required to be well done and cleanly. Kitchen and dining quarters are well screened and all garbage is taken care of in a sanitary manner. Large ice chests are provided for all perishable foods. Where the domestic water supply is not above suspicion all drinking water is either boiled or filtered or both.

Tents are provided for sleeping quarters restricting their occupancy to two persons to each ordinary sized tent. The men are required to furnish their own blankets, but single bunks are given for which clean straw is provided and changed every week or whenever a bunk is vacated. Bunks are frequently washed with germicide solution.

Bathing facilities are provided, the tubs furnished with hot and cold water. The water for bathing is heated by the same boiler furnishing water for washing clothes. Plenty of soap is furnished to each man. A large assembly tent is provided with a stove where men who get wet may dry their clothes before going to their individual quarters. Most of the small tents are furnished with heating stoves. In short every effort is made to maintain the camp in a comfortable and healthful condition.

The river division possesses one large working barge, one small barge, a pile driver, a kitchen houseboat, one towing launch, one fast dispatch launch, five rowboats and two portable skiff engines capable of driving the row boats five to seven miles an hour. When work is required at more than one place at a time it becomes necessary to rent barges. For that reason the department should have at least one more working barge and one or two small barges for hauling brush and other materials.

In addition to the expenditures for construction detailed above, the fund provided by the appropriation act quoted, has been used for other purposes directly connected with improving the navigability of the streams as follows:

#### MISCELLANEOUS WORK.

*Enlarging the Sacramento.*—In discussing flood control in a previous chapter herein, it was shown that the appropriation by congress of \$400,000 for beginning the work of enlarging the mouth of the Sacramento River, was made contingent upon rights of way being furnished free of cost or charge against that appropriation.

People interested in furthering the project undertook to procure the required rights of way by collecting subscriptions to a fund for that purpose. The city of Sacramento contributed \$75,000 to the fund. All efforts proved unequal to securing enough funds for the purchase of all the lands required so the advisory board allotted moneys from the "river fund" for the purpose, and \$71,996 have been expended. In a few cases terms of purchase could not be arranged with the owners and condemnation suits were brought. The last of these is now pending in the United States court at San Francisco.

*San Joaquin River Survey.*—In 1912 congress appropriated \$32,-277.50 for the purpose of making a detailed survey of San Joaquin River above Stockton, with a view of determining the feasibility of improving navigable conditions on that stream throughout its course in the valley. The appropriation was made available only on condition that California should provide a like sum. The legislature of 1913 made an appropriation of the same amount, but owing to the aggregate of appropriations made far exceeding the visible revenues the bill failed to receive executive approval, but to meet the requirements of the congressional act \$32,277.50 was allotted from the state's "river fund," and placed at the disposal of the federal engineers for the purpose stated. The survey has been in progress during the latter part of 1913 and the summer of 1914.

*Survey of Mountain Reservoirs.*—In the light of irrigation enterprises in the Sacramento Valley already inaugurated and the vast extent of territory requiring irrigation for its full development, it is realized that soon the draft of water from the rivers for that purpose will greatly reduce the summer flow now available and needed for navigation.

It is needful to know to what extent the summer flow withdrawn for irrigation can be replaced by flood waters stored in the mountains. The Department of Engineering entered into a cooperative arrangement with the United States Reclamation Service for the survey of certain reservoir sites in the Pitt River basin to ascertain their actual worth for storage and to serve as a basis for releasing from the existing reserve all lands not actually required for the dams and reservoirs.

The sum of \$2,500 was allotted from the river fund to meet a like sum provided by the Reclamation Service. The field surveys have just been completed and Mr. O. W. Peterson, the engineer in charge, has been transferred to San Francisco to arrange the data collected.

*Flood Flow Measurements.*—Heretofore it has always been impracticable to measure the flood flows in the streams after entering the valley for the reason that they were continually spilling their water over the banks and receiving accessions from tributaries. Arrangements have

been made to make such measurements at any time that the streams may reach flood stage this winter, not only in the rivers themselves, but also in the overflow basins, should water reach them.

The data so obtained will be of great assistance in the study of flood planes and design of flood channels for the great flood control project.

The sum of \$2,000 has been allotted for these measurements from the river fund.

#### FLOOD CONTROL ON OTHER STREAMS.

*Eel River.*—The legislature of 1909 made an appropriation of \$25,000 to continue the work of bank protection on Eel River in Humboldt County. The efforts of the department since that have been directed in repairing and protecting work that had been placed under an appropriation made in 1907. By terms of the act (chapter 502, 1909) no new work could be undertaken by the Department of Engineering until a deposit of one half of the estimated cost shall be made by the owners of property to be benefited. No application to have new work executed was made until late in the summer of 1912. The State Engineer personally examined the situation and concluded that it would be impossible to complete any works undertaken so late in the season, and any structures uncompleted would, when the floods came, be in danger of utter destruction.

The situation on Eel River is a very difficult one, and it is believed that radical changes must be made in the methods of control in order to obtain permanent and effective results. To enable the department to formulate plans for effective protection works it is necessary to have complete surveys of the ground, which surveys have since been made and training works built to direct and control the flood waters of this turbulent stream.

*Mad River.*—The legislature in 1913 appropriated \$15,000 for protection work along the banks of Mad River in Humboldt County. This stream has given a great deal of trouble from eroding its banks, in some instances having washed away 80 acres in a body of rich garden soil. The appropriation act provided that the owners of land to be protected should contribute an amount equal to that expended by the state.

The beneficiaries deposited \$5,108.50 in the state treasury to the credit of the fund and work provided under the law has been executed and paid for to the extent of \$7,187.70. Other work has been completed and adjustment of accounts are being made. The work has been under the direction of Mr. Rasmus Anderson, member of the county board of supervisors, who has been indefatigable in efforts to accomplish the work in time to afford protection against the floods of the coming winter.

*Financial Statement.*—The expenditures of moneys appropriated for river work are exhibited in the following table:

TABLE 7.

Account of appropriations and expenditures by the state and the government in cooperation with the state for rectification of rivers and flood control.

Locality	Purpose	Amount al- lotted or expended	Amount charged to	
			State appro- priations	Cooperating agency
1912-1913.

## MISCELLANEOUS.

The Department of Engineering, as explained in an earlier paragraph, has duties not included in the foregoing; some prescribed by statute and others arising from the comities of professional relations with the public.

*State Supervision of Dams.*—Whether persons or corporations should be permitted to construct high dams in the streams of the state impounding immense bodies of water, which, should the dam fail, would carry destruction to communities below without being subjected to state supervision, is a question that is receiving much attention.

In some states laws have been enacted requiring the plans of all such structures to be approved by state authorities and the construction executed under the supervision of a responsible state official.

One dam is being constructed in California which it is said will impound nearly one half million acre-feet of water—21,789,000,000 cubic feet. Think of the havoc such a body of water would cause should it be suddenly released by a collapse of the dam. Another is being constructed on another stream that it is reported will be three hundred feet high.

It is presumed the companies which are constructing these stupendous works have taken all precautions that human foresight can invoke to prevent an accident that would destroy their valuable property, but they may be deceived by employees.

In discussing this question in a former report of this department the following was stated:

An instance came under the notice of the department within the last few months. A dam had been constructed in a narrow canyon and a reservoir created. From the time of its construction disquieting rumors obtained circulation in the communities situated along the course of the stream in the valley below that the dam was unstable. The owners scouted the idea that it was unsafe, exhibited the plans and specifications, which had been prepared by a man of known engineering ability, and pointed to the fact that the company would be a great sufferer in case of failure, and asked if that were not enough guarantee that all care had been taken to make the structure safe.

The State Engineer was appealed to by those who felt that their lives and property were jeopardized, and finally the company consented to permit the dam to be examined, and agreed that if it was found defective such measures as were necessary would be applied.

An inspection revealed the fact that in construction the specifications had been grossly ignored, and that structural members were strained to breaking limit, and in one instance had actually broken. Remedial measures were prescribed and applied as agreed upon.

Here the owners of the property were resting secure in the belief that good plans and specifications had been followed in constructing a safe structure, but in fact the specifications had been ignored, and the people in the canyon below were in danger of destruction in the event

of a probable accident, and no authority had existed to see that the plans and specifications were complied with.

In the case cited the terms of the specifications had been deliberately violated, because, if not detected, a greater profit would be made, and if the fraud should be discovered there was no penalty prescribed for it.

Another incident recently occurred wherein the people of communities below an immense reservoir to be constructed, and upon which work had commenced, were fearful that the proposed dam would not be safe. The State Engineer visited the work and after a friendly conference with the representatives of the company the type of dam was changed to one more suitable for the conditions at that site.

Several dams in the mountains are known to be unsafe, but the state is powerless to compel their owners to make them safe. It is true, those in mind are small and being situated so far back from centers of population, the flood wave caused by their failure would be largely dissipated before it would reach a point to do great danger. But some others are building or contemplated that when completed, will be a menace of great danger unless designed and constructed with all the safeguards possible.

It is a crime for an inspector or any workman on state work to have knowledge of fraudulent work being done and not make it known. All dams or other works, the failure of which would be dangerous to human life, should be subject to state supervision both as to design and construction, and to knowingly permit omission or commission that would weaken such a structure should be a felony entailing severe penalties.

It is believed the State Department of Engineering is the proper agency of the state to approve plans and supervise the construction of all works of the character mentioned which might become a menace to life and property in such large measure as may some of the great dams and reservoirs contemplated for hydroelectric and irrigation development in this state.

*Bridges on Navigable Streams.*—Under the provisions of the law (Chapter 68, Statutes 1881) the plans for any bridge which it is proposed to erect over a navigable stream in this state must be approved by the State Engineer, who is required to specify the width of opening required for the draw.

During the last year plans for two drawbridges for county highways crossing navigable streams have been approved and the width of opening therein specified by the State Engineer.

*Irrigation District Bonds.*—That the bonds of irrigation districts are not easily sold in the financial marts has long been realized by the managers of districts having bonds to sell, and desiring to raise money for construction, improvements or extensions of their irrigation works.

Plate XXIII—A. Power Dam, Log Cribs Filled With Rock.

B. Earth Fill Dam, Paved Slopes.

C. Rock Fill Dam, Rubble Faced.

Various reasons have been given to account for the apathy of investors toward these bonds, and one reason which was strongly urged was that irrigation district bonds were not available under the law for purchase with state funds, nor for the investment of trust funds held by banks.

An attempt to cure this defect was made by the enactment of a statute (Chapter 157, 1911, supplemented by Chapter 3, Ex. Sess. 1911), authorizing investments to be made as above, provided the project of the district should be approved by a commission composed of the Attorney General, State Engineer, and State Superintendent of Banks.

This provision for validation did not seem to stimulate the sale of such bonds, and it was explained that the statute was not supported by the constitution. Therefore an amendment to the constitution was submitted at the general election held in November, 1912, and the legislature amended the bond validation act, and the act providing for the organization of districts in many important particulars.

The most important features of the laws enacted are epitomized as follows:

To organize a new district the project must first be submitted to the State Engineer who investigates and reports as to whether or not a sufficient supply of water is available or may be acquired by any practicable means, including condemnation of existing rights, and the feasibility of the project.

Whenever it is deemed necessary to issue bonds for the purpose of constructing works or improving, extending or enlarging the system, the plans therefor shall be submitted to the State Engineer, who must examine such plans and make such examinations of the project as he deems necessary. He reports his conclusions as to water supply and feasibility of the plans.

Bonds issued for the stated purposes are twenty to forty year bonds and bear such interest as determined by the board of directors, but not to exceed 6 per cent per annum, payable semi-annually. Bonds must be sold on competitive bids to the highest and best bidder.

These two features are very important changes in the law. Formerly the interest was fixed at 5 per cent and no bonds could be sold below par.

Bonds that were authorized but not sold before the foregoing provisions became effective may be given the same privileges upon a two-thirds vote of the district.

During construction of any work to be paid for out of the proceeds of the sale of bonds, progress reports are required to be made to the State Engineer.

Annual statements of the financial transactions of the district are required to be made also to him.

The State Engineer may at any time make examination of the affairs of any irrigation district or call upon the officers thereof for such information as he may desire and make such report thereon as he may deem advisable.

The bond validation act above referred to, amended by chapter 366, Statutes of 1913, provides that when the directors of a district deem it advisable to have the district's bonds made available for investments for all trust funds, and for funds of all insurance companies, banks, both commercial and savings, trust companies, and for state school funds, and other public funds which may legally be invested in bonds of cities, counties, school districts or municipalities, and for deposit as security for the performance of any act, the said board of directors may by resolution so declare, and file a copy of the resolution with the bond commission.

The bond commission, composed of the three state officers above named, make investigations of the affairs of the district, particularly upon the following points:

(a) The supply of water available for the project and the right of the district to so much water as may be needed.

(b) The nature of the soil as to its fertility and susceptibility to irrigation, the probable amount of water needed for its irrigation and the probable need of drainage.

(c) The feasibility of the district's irrigation system and of the specific project for which the bonds under consideration are desired or have been used, whether such system and project be constructed, projected or partially completed.

(d) The reasonable market value of the water, water rights, canals, reservoirs, reservoir sites and irrigation works owned by such district or to be acquired or constructed by it with the proceeds of any of such bonds.

(e) The reasonable market value of the lands included within the boundaries of the district.

(f) Whether or not the aggregate amount of the bonds under consideration and any other outstanding bonds of said district, including bonds authorized but not sold, exceeds 60 per centum of the aggregate market value of the lands within said district and of the water, water rights, canals, reservoirs, reservoir sites and irrigation works owned, or to be acquired or constructed with the proceeds of any of said bonds, by said district, as determined in accordance with paragraphs (d) and (e) of this section.

(g) The numbers, date or dates of issue and denominations of the bonds, if any, which the commission shall find are available for the pur-

Plate XXIV. Goodwin Dam, Stanislaus River, Headworks South San Joaquin and Oakdale Irrigation Districts.

Plate XXV. La Grange Dam, Tuolumne River. (From Report of Turlock Irrigation District.)

poses provided for in section 7 of this act, and, if the investigation has covered contemplated bonds, the total amount of bonds which the district can issue without exceeding the limitation expressed in paragraph (f) of this section.

The written report and findings of the commission is filed in the office of the State Controller, and if the commission finds that the project is feasible and that the outstanding and proposed bonds do not amount to more than 60 per cent of the reasonable value of the property within the district including the irrigation works, water and water rights and other property of the district, thereupon all of said bonds become eligible to certification for the purposes enumerated above.

Upon any eligible bond being presented to the Controller he attaches thereto a certificate in the following form:

SACRAMENTO, CAL., (insert date).

I, \_\_\_\_\_, Controller of the State of California, hereby certify that the within bond, No. \_\_\_\_\_ of issue No. \_\_\_\_\_ of the \_\_\_\_\_ irrigation district, issued \_\_\_\_\_ (insert date), is in accordance with an act of the legislature of California approved \_\_\_\_\_ a legal investment for all trust funds and for the funds of all insurance companies, banks, both commercial and savings, trust companies, the state school funds and any funds which may be invested in county, municipal or school district bonds, and it may be deposited as security for the performance of any act whenever the bonds of any county, city, city and county, or school district may be so deposited, it being entitled to such privileges by virtue of an examination by the state engineer, the attorney general and the superintendent of banks of the State of California in pursuance of said act. The within bond may also, according to the constitution of the State of California, be used as security for the deposit of public money in banks in said state.

\_\_\_\_\_  
Controller of State of California.

The effect of the certification of bonds as outlined in the foregoing is to make irrigation district bonds available for all purposes for which county and municipal bonds are available, a privilege that had been denied to them.

The State Engineer has made the preliminary examinations under the first act above discussed (chapter 578, 1913) for the organization of new districts or proposed issue of bonds for organized districts as follows: Anderson-Cottonwood District in Shasta County; Oakdale, Modesto, Turlock and Dry Creek districts in Stanislaus County; Alpaugh, Tulare County; Black Rock, Inyo County; Little Rock Creek, Los Angeles County; La Mesa, Lemon Grove and Spring Valley District, San Diego County and Imperial District, in Imperial County.

The conditions attending the last named district are peculiar. Nearly half a million acres of absolutely barren desert have been transformed into an agricultural paradise by the application of water brought from the Colorado River.

The enterprise was developed by a private corporation which built a canal diverting from the river in California, but within less than a mile from the head the canal crosses into Mexico and runs nearly fifty miles in foreign territory before returning across the international boundary line, where it begins to deliver water to lands in California.

Serious breaks in the river bank caused the river to forsake its channel leading to the Gulf of California and to adopt the canal as its course to the bottom of Imperial Valley, more than 300 feet below sea level. The cost of closing the breaks and restoring the river to its original course, with judgments for damages caused by the runaway waters, involved the company in financial difficulties which threw its affairs into the hands of a receiver.

The Imperial Irrigation District was formed for the purpose of taking over the property of the irrigation company. The State Engineer made an exhaustive investigation of the whole enterprise and reported that the property was worth the amount of the obligations, about \$3,000,000, but that if purchased the district should provide a fund of \$500,000 and maintain it as an emergency fund to meet exigencies likely to arise at any time from the vagaries of Colorado River.

A constitutional difficulty also existed in that municipalities were prohibited from owning property outside of the state.

The district has held an election, and by a large majority voted in favor of issuing bonds to the extent of \$3,500,000 for the above stated purpose.

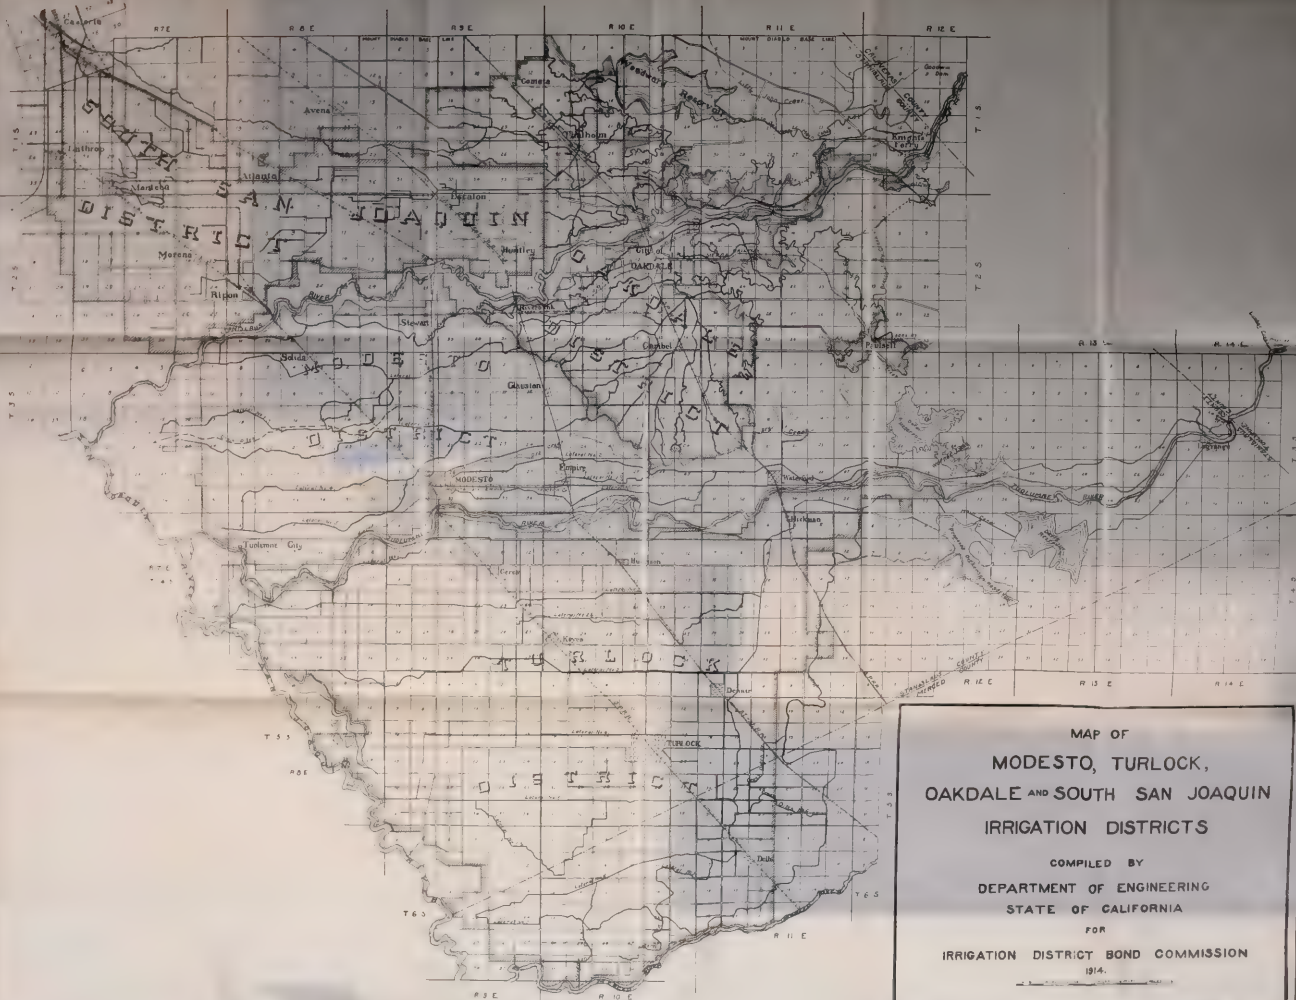

A constitutional amendment authorizing municipal corporations to own property outside of the state was proposed by the last legislature and its adoption at the general election in November seems highly probable.

The bond commission has investigated and found favorably upon the bond issues of five districts—one under the provisions of the original "validation" act, chapter 157, 1911, and four under the amended act, chapter 366, 1913, as follows:

TABLE 8.

Irrigation districts investigated and bond issues approved by the Irrigation District Bond Commission.

Name of district	Area of district, acres	Amount of bonds approved	Value of all property	Per cent of bonds to property values
San Ysidro, act of 1911.....	485	\$25,000	\$61,400	44

Totals .....	402,390	\$10,789,000		

MAP OF  
MODESTO, TURLOCK,  
OAKDALE AND SOUTH SAN JOAQUIN  
IRRIGATION DISTRICTS

COMPILED BY  
DEPARTMENT OF ENGINEERING  
STATE OF CALIFORNIA  
FOR  
IRRIGATION DISTRICT BOND COMMISSION  
1914.

The investigations for the bond commission are made by an employee of the Department of Banking detailed for the purpose, cooperating with engineers detailed from the regular staff of the Department of Engineering, or employed specially. The law requires the districts to pay the expenses of making the investigations for the bond commission.

In the matter of the preliminary investigations made by the State Engineer for the organization of districts or the issuance of bonds—the law directs the State Engineer to make the investigations but is silent with regard to the expenses of making such investigations. The practice has heretofore been to detail an engineer from the office holding a statutory appointment, and depend upon the organization committee to provide funds to defray traveling expenses. This has been necessary for the reason that the contingent fund of the department has never been large enough to meet the ordinary claims against it.

It has not been altogether satisfactory to resort to the expedient stated. In one instance the agent was called to the most distant part of the state, paid his fare for traveling several hundred miles, several days' hotel bills and other accommodations, all from his private funds, and was not reimbursed until more than a year had elapsed. It is submitted that when an employee of the state must travel and incur expenses in the performance of mandatory duties, there should be provision for reimbursing him.

Reverting to those provisions of the law heretofore quoted which provides that plans of work for which bonds are to be issued must be submitted to the State Engineer, and that on work being executed to be paid for from the sale of bonds, progress reports must be rendered to him, it is desired here to call attention to the fact that while the law says he may make a report as to such work, it gives him no power to stop the work if it is unsatisfactory or to compel a compliance with the plans and specifications that he had approved.

It is urged that, having given its approval to the enterprise, and in a measure loaned its credit in the validation of the district's bonds, the state should properly have the right conferred by the act to pass upon the sufficiency of the plans, but in addition its agent should be clothed with all the authority necessary to compel the construction of the works strictly according to those plans, and to his complete satisfaction. This matter is commended for consideration.

### IRON CANYON PROJECT.

For many years a project has been agitated to construct a dam in Sacramento River at Iron Canyon, a short distance above Red Bluff, for the purpose of creating a large reservoir which would serve for irrigating many thousands of acres of land in Sacramento Valley, as well as serve to diminish the dangerous flood flows of the river.

The matter has been under consideration by the United States Reclamation Service for a number of years, and a preliminary investigation was made of several storage reservoirs in 1904-5. Later investigations were resumed by the service, and as far as conducted at that time, the results were embodied in a report published in a report of the United States Senate Committee on Irrigation and Reclamation of Arid Lands, sixty-first congress, third session.

An organization of land owners, county authorities, civic bodies and others interested in the subject was formed under the name of the Iron Canyon Project Association to further the matter.

This association provided funds in 1913 to enable the reclamation service to further prosecute its investigations, which were completed and presented to the Secretary of the Interior a few months ago.

The investigations were made by officers and employees of the United States Reclamation Service, and the report thereon compiled by E. G. Hopson, supervising engineer, in conference with John T. Whistler, engineer, and G. Stubblefield and O. W. Peterson, assistant engineers.

Several variations of the project were considered and tentative plans, with estimates worked out. These several variations cover projects for irrigation alone; irrigation with power development; irrigation and flood control; irrigation with power development and flood control; and either phase coupled with or omitting consideration of navigation in the river below. Altogether some ten combinations were estimated upon.

The Secretary of the Interior appointed a board of review to consider the investigations of the project and to report thereon. The board was composed of the following: Brigadier General W. L. Marshall, ex-Chief of Engineers, United States Army, chairman; Mr. D. C. Henny, Acting Chief Engineer, United States Reclamation Service; W. F. McClure, State Engineer, State of California, and Mr. H. T. Cory, consulting engineer, of San Francisco, representing individual and corporate interests which would be affected by the project.

The board of review met and went over the field covered by the project and reported its conclusions to the Secretary of the Interior, to be published as a document from the United States Reclamation Service.

### ECONOMIC RESEARCH.

From the beginning of its existence the government of the United States has been engaged in making surveys of its territory. For many years the principal surveys on the land were conducted by army engineer officers under the direction of the War Department. Later the Department of the Interior took charge of the survey of public lands, and in 1879-80 the United States Geological Survey was organ-

ized under that department with Clarence King as director. The first comprehensive report was that for the years 1880–81, published in 1882 by J. W. Powell, director, and was devoted almost wholly to the treatment of structural geology. (The first annual report by King, in 1880, only dealt with the plans of the organization.)

The report of 1883 took up the subject of paleontology and mineralogy. In 1884 the new subjects treated were topography, artesian wells, and paleobotany. The report of 1885 mentions new methods in silver determinations, reports on swamps, and on flora. In 1886 salt making was introduced into the investigation. In 1886–87 the study of petroleum and gas was taken up, and the researches of the survey reached California in a "Quaternary History of Mono Valley," "Geology of Lassen Peak District," and "Geology of Quicksilver Deposits of Pacific Slope."

The report of 1887–88 discussed the great Charleston earthquake. Part II of the tenth annual report 1888–89 was devoted exclusively to irrigation. Each succeeding year has witnessed the expansion of the scope of investigation until now it includes so many economic subjects that the survey is organized into eight branches, subdivided into twenty-seven divisions, and each division is again subdivided into sections according to the subjects to be investigated by it. The result of the great diversity of subjects brought under examination and analyses is that the United States Geological Survey has become a most valuable bureau of research and information.

The survey now employs nearly 1,000 people, most of whom are experts in their respective specialties. So reliable is the information obtained considered by those interested that the bulletins and publications of the survey are eagerly sought, and to supply the demand nearly 1,500,000 copies a year are printed for distribution. Indeed, the ability of these experts is so well recognized the world over that the survey frequently suffers loss by the resignations of its investigators, whose services are sought by other governments and by industrial concerns operating in this and in foreign lands. Men have been called to conduct investigations in Mexico, Canada, Honduras, Peru, China, Africa, and other countries.

Other branches of the federal government, such as the Office of Experiment Stations, Office of Public Roads, Forestry Service, etc., are engaged, coordinately with the Geological Survey, in conducting investigations along the lines of research pertinent to their respective fields of public service. The government, through these coordinate branches, is so well prepared with their several organizations, experienced staffs and complete equipment for accurate investigations along extensive lines of economic development, that their reports are sought for by

private and public interests, and the accuracy of their statements is accepted without question.

The activities of the United States Geological Survey in California during the last two years has been both extensive and varied. The geologic branch has conducted examinations and study of gold deposits in Trinity, Shasta, and Sierra counties; geology and ore deposits of the Randsburg region, geologic structure and paleontology of the White Mountains, Inyo County; silver-lead deposits of Darwin. Extensive investigations and study have been made of deposits of magnesite, of borates, potash, nitrates and other valuable salines.

Reconnaissances made of the chromite and asbestos deposits in Shasta; talc and celestine in San Bernardino County; of semi-precious gems such as tourmaline.

The troubles experienced in some of the oil fields from infiltrating water has been investigated and remedial measures studied.

The coal fields of Monterey County were examined, as well as coal and oil fields in other portions of the state.

It may not be generally known that California has within its borders coal-bearing lands on the public domain. The Geological Survey is called upon to make examinations of such lands, to furnish information for their withdrawal from entry, appraisal or restoration.

During the last year, as the result of the examinations made by the survey, 222,139 acres of lands in California have been released from withdrawal as coal-bearing, leaving only 17,764 remaining reserved from sale. Of these reserved lands 7,720 acres have been appraised at a value of \$585,086, or an average value of \$75.70 an acre—quite an advance over the price of \$2.50 an acre that the government received for more valuable lands before the present system was established.

*Other Mineral Lands Are Handled in the Same Way.*—Long ago California oil producers undertook to convince the Navy Department of the superiority of oil as a fuel for warships, but not until 1912 did the government become convinced of that fact and that the public lands might contain a vast store of the fuel. In that year two naval petroleum reserves were created in California, aggregating 68,249 acres and estimated to contain 250,000,000 barrels of oil. The last report of the director of the survey shows that during the year ending June 30, 1914, 120,647 acres were withdrawn and 98,283 acres restored, leaving a total of 1,410,444 acres of oil lands withdrawn from public entry.

Potash is a mineral occurring in the barren basins of the desert regions. To prevent these valuable deposits falling into the possession of speculators who would create a monopoly of the product, areas of known potash-bearing soils in California were withdrawn in 1913 to the extent of 94,407 acres. None was added to this area in 1914, but

examinations by the survey resulted in the release of 370 acres, leaving 94,087 acres still reserved.

In 1909 congress passed a law known as the enlarged-homestead act, applying to homestead entries in twelve western arid states. This act permits the entry by one person of 320 acres of "non-mineral, non-irrigable, unreserved, and unappropriated surveyed public lands which do not contain merchantable timber." The lands subject to entry under the act must first have been designated by the Secretary of the Interior as not being "susceptible of successful irrigation at a reasonable cost from any known source of water supply."

Designations of lands as being of the class subject to entry under the enlarged-homestead act are made by the Geological Survey. Designations are not confined to the areas included in petitions of individual entrymen, but extend to contiguous lands of the same class. The first petitions made under the provisions of the act in California were filed in 1913, since which time the survey has acted upon 222 petitions, as follows:

Number of petitions received .....	222
Number of petitions approved .....	122
Number of petitions partly designated .....	8
Number of petitions refused .....	25
Number of petitions pending June 30, 1914 .....	66
Total area of land designated as subject to entry under the act.....	850,506 acres

In order that important springs and other sources of stock water on the desert and semi-arid range lands should be protected from being monopolized, but remain accessible to the public, the Department of the Interior has from time to time created public water reserves.

The first reserve made in California was ninety-four acres, set aside in 1913; during last year 43,430 acres were reserved, making a total of 43,524 acres of reservation in the state on June 30, 1914.

The classification of the public lands with relation to their value in connection with water power development is also a function of the Geological Survey. Its operations under that head in California for the two years ending June 30, 1914, are summarized as follows:

<i>Power site reserves.</i>		
Outstanding July 1, 1912.....		165,008 acres
Withdrawals 1912-1914 .....	17,076 acres	
Restorations .....	13,315 acres	
		57,761 acres
Outstanding June 30, 1914.....		222,769 acres

None of the work of the Geological Survey above described was participated in by the state, and is cited only to illustrate the scope of the activities of the survey in its broad field of public service, the benefits of which extend to all the states.

### CO-OPERATIVE INVESTIGATIONS.

Notwithstanding the large appropriations made by congress for the prosecution of the several lines of investigation carried on by the Geological Survey and other branches of the government, the field of operations, extending over the entire country and into foreign territory, is so large and the number of subjects investigated is so great, that progress is often too slow to meet the requirements of the rapid development of growing communities.

To expedite investigations that otherwise would have to wait for the work to reach them in its regular course, many states cooperate with the national government in prosecuting those lines of inquiry in which they are most interested.

In the matter of topographic surveys, nineteen states and one territory participated with the Survey while sixteen states and Hawaii cooperated in water resources investigations in 1913-1914.

Beginning in 1903, each session of the California legislature since has appropriated various sums for the purpose of cooperating with the several branches of the national government in the above mentioned surveys and the prosecution of investigations into various phases of economic development. Formerly the appropriations were made specifying a fixed sum for each subject to be investigated, but, in line with a recommendation made by the State Engineer in the first biennial report of this Department, the legislature since 1909 has made the appropriation as a whole, so that the funds could be apportioned by the Department of Engineering according to the requirement of each line of inquiry to be undertaken.

In pursuance of this provision of the appropriation act, agreements were entered into with the Director of the United States Geological Survey and with the Secretary of Agriculture, for cooperative research, and allotments were made of the funds appropriated to cover the state's portion of the expense of making the investigations. The agreements now in force are as follows:

With the Director of the United States Geological Survey, for:  
Topographic surveys.

Water resources investigations.

With the Department of Agriculture, Office of Experiment Stations, for:

Irrigation and drainage investigations.

These agreements are made to run only one year and are renewed annually.

The gathering of the information included in the above subjects is very properly a function of the Department of Engineering, but to provide the Department with the requisite equipment for field and

laboratory work and to maintain the necessary working force, would require a large appropriation. Furthermore, the work accomplished by the Department, acting alone, would be duplicate of a great deal that has been done before and that would follow in the regular progress of the work of the other governmental investigators.

By these cooperative arrangements the state obtains the service of already organized corps of experienced investigators possessing all the best apparatus and instruments, and for their service the state is required to pay only a portion of the operating expenses. As already stated, the appropriations made by the congress for the matters under discussion are too small to permit of any great amount of work being accomplished in any one state, but it is the policy of the government to give preference to those states which desire to cooperate, and the practice is to allot an amount equal to the state's appropriation.

It should be borne in mind that, in addition to the many advantages resulting from cooperative work, all money appropriated by the state is met by a like amount from the federal treasury and nearly every dollar is expended within the state.

The twenty states cooperating in topographic surveys and the seventeen joining in water investigations participate in the benefits flowing from the expenditure of \$244,000 of government funds.

### TOPOGRAPHIC SURVEYS.

The character of the cooperative topographic surveys made in accordance with the agreement with the Director of the United States Geological Survey is summarized as follows:

The order in which the field work is prosecuted in different parts of the state is fixed by agreement from time to time as the work progresses. The surveys are executed in a manner sufficiently elaborate to prepare maps upon scales which are agreed upon for different localities, and exhibit the hydrography, hypsography, public culture, and all public land and county boundary lines which are marked upon the ground.

The information secured by the surveys is published in atlas sheets of convenient size, called quadrangles. The sheets of paper are 20 by 16½ inches in dimensions, the territory embraced in each quadrangle covering 15 minutes, 30 minutes, or 1 degree of latitude and the same or longitude, according to the scale of the publication. Three scales are employed. The largest scale used in standard sheets is 1:62500, corresponding very nearly to one mile to one inch. Maps drawn on this scale are those of thickly settled communities or industrially important sections of the country. An intermediate scale of 1:125000, or about two miles to the inch is employed for the greater part of the country while the smallest scale, 1:250000, or about four miles to the inch, is used for territory of relatively slight industrial importance or

sparse population, such as the desert regions. A few special maps of important mining districts or other limited areas are issued on special scales suited to the requirements of the country mapped, when sheets are designated by name, usually that of some important physical feature, thus: Yuba City Quadrangle, Pyramid Peak Quadrangle, etc. That portion of the Sacramento Valley lying west of the Sacramento River has been published in sheets 28 by 40 inches and covering several quadrangles, the scale being 1:31680, or one half mile to the inch. These are found very convenient in studying irrigation and reclamation in these regions where projects embrace large areas.

The maps are sufficiently detailed to serve as base maps on which are represented the character of the soils and forests of the area surveyed, and show all principal objects, natural or artificial, such as streams, lakes, shore lines, reservoirs, canals, important wells, springs, railroads, highways, power-transmission lines, principal houses, villages, towns and cities, quarries, mills and other industrial plants, all with great clearness and fidelity to position.

The hypsography is shown by contour lines with vertical intervals of 5 to 100 feet, according to the smoothness or ruggedness of the terrene. The heights of important points are determined and enduring monuments and bench marks are established, the elevation and location of which are found by precise methods. Along both sides of the Sacramento River, from Suisun Bay to a point several miles above the city of Sacramento, there have been set solid concrete monuments, in which are imbedded aluminum tablets upon which are marked the elevations to the nearest foot. At frequent intervals all over the territory surveyed are placed other bench marks which consist of iron pipes set solidly in the ground and capped with a bronze or aluminum cap, marked in the same manner as the tablets on the concrete monuments. A record of the location, and the elevation in feet and fractions, of all bench marks is kept on file in the office of this Department. All elevations noted by the survey are determined by precise level lines run and checked with the utmost care, and are referred to mean sea level as deduced from long series of observations.

The United States Geological Survey conducted topographic surveys in thirty states and one territory during the fiscal year ending June 30, 1914, and mapped 19,150 square miles of territory. The total area of the country now mapped amounts to 39.6 per cent of the entire area of the continental United States and 21 per cent of Hawaii.

In California there were 6,133 square miles surveyed and mapped during 1912 and 1913, and during the year just closed 1,672 square miles were added, making a total of 7,805 square miles surveyed during the biennial period ending June 30, 1914. The total area now mapped amounts to 70 per cent of the entire surface of the state.

The surveys were made by the United States Geological Survey, and by the Survey in cooperation with the State of California. Those quadrangles surveyed in cooperation with the state represented by the Department of Engineering will be found in the report at the end of this article.

In addition to the surveys made in cooperation with this Department, the Survey, under cooperative agreement with the University of California began early in 1914 a survey of Santa Rosa quadrangle.

In addition to the cooperative surveys named, the Geological Survey has completed the survey and mapping of the following quadrangles: Petaluma, Capitola, Soledad, Priest Valley, Mount Morrison, Mojave.

Work was begun upon Seiad, Sawyers Bar and Crucero quadrangles, and revision commenced on San Francisco, Concord, Hayward and Alameda quadrangles, while the map of Kern River Oil Fields was completely revised.

The topographic work now in progress which is of the greatest immediate importance is the survey of the Great Valley.

Special effort was concentrated upon the survey of the Sacramento Valley, in response to the great demand for information required by the rapid development of irrigation and reclamation enterprises. The survey was completed and the maps are being rapidly published. These maps give contours at five-foot intervals up to 300 feet elevation, that being taken as the upper limit of practical irrigation from the streams entering the valley. A consolidated map of the entire valley on a small scale and showing 25-foot contours has also been published. The survey of the Sacramento Valley being completed, the field parties were transferred to the San Joaquin Valley, that territory being considered next in importance. The field work in the valley has progressed about one third the length of the valley. Maps of this region are very greatly needed in the study of flood control problems, reclamation and navigation now being vigorously prosecuted.

The cooperative topographic surveys have been conducted under the supervision of Mr. George R. Davis, geographer in charge of the Pacific Division, directed by Mr. R. B. Marshall, chief geographer.

Their report in detail for the two years ending June 30, 1914, here follows:

**Report of topographic surveys in cooperation between the United States Geological Survey and the State of California, for the fiscal years beginning July 1, 1912, and ending June 30, 1914.**

In accordance with the cooperative agreements signed August 24, 1912, by George H. Ashley, acting director, and July 1, 1913, by George Otis Smith, director, for the United States Geological Survey, and September 6, 1912, and July 22, 1913, by W. F. McClure, State Engineer, for the State of California, the federal survey allotted \$14,000 each year, and the state an equal amount, for cooperative topographic surveys in the State of California for the fiscal years ending June 30, 1913, and June 30, 1914.

The following is a summary of the field and office work accomplished during the above period under the general direction of R. B. Marshall, chief geographer, and under the immediate supervision of George R. Davis, geographer in charge of the Pacific Division :

\*River profile surveys. (Funds for this river profile work provided by State Board of Control.)

The following members of the Topographical Branch were engaged in the field work:

*Topographic Mapping:*

Duncan Hannegan, Topographic Engineer  
 J. P. Harrison, Topographic Engineer  
 J. G. Staaek, Topographer  
 W. N. Vance, Topographer  
 A. E. Burkland, Topographer  
 E. R. Bartlett, Assistant Topographer  
 Chas. Hartmann, Assistant Topographer  
 H. W. Peabody, Assistant Topographer  
 T. P. Pendleton, Assistant Topographer  
 O. G. Taylor, Assistant Topographer  
 S. E. Taylor, Assistant Topographer  
 J. B. Leavitt, Assistant Topographer  
 F. A. Danforth, Junior Topographer  
 L. V. Fees, Junior Topographer  
 R. B. Kilgore, Junior Topographer  
 D. H. Watson, Junior Topographer  
 S. H. Birdseye, Junior Topographer  
 C. A. Stonesifer, Junior Topographer  
 R. M. LaFollette, Topographic Aid  
 H. S. Leicht, Topographic Aid  
 Frederick Rider, Topographic Aid.

*Triangulation:*

C. F. Urquhart, Topographic Engineer  
 C. L. Nelson, Topographic Engineer  
 W. R. Chenoweth, Junior Topographer  
 R. B. Kilgore, Junior Topographer.

*Levels:*

D. S. Birkett, Junior Topographer.

## OFFICE WORK.

The office drafting of the Avena, Bachelor Valley, Burnham, Cooperstown, Dickenson, Lathrop, Lone Tree Valley, Manteca, Midway, Mojave, Montpelier, Oakdale, Patterson, Peters, Reservoir, Ripon, Romain, Salida, Thalheim, Tracy, Trigo, Union Island, Vernalis, Westley, and Westport topographic maps was completed and the maps transmitted for engraving; and the office drafting of the plan and profile maps of the Pit River, the Middle and South Forks of the American River, and the Feather, San Joaquin, and Tuolumne rivers, was completed and the maps photolithographed. The drafting of the following incomplete maps was also commenced: 9 per cent of the Bradley, 20 per cent of the Metz, and 12 per cent of the San Ardo being finished.

The adjustment of the levels for the Ripon, Chowchilla, Slough, Dickenson, Gustine, Ingomar, Los Banos, Owens Creek, Ceres, Patterson, Cressy, Crows Landing, Deadman Creek, Denair, Dry Creek, Elgin, Empire, Salt Slough, Waterford, Westley, Westport, Romain, Madera, Newman, Salida, Montpelier, Reservoir, Volta, Nos. IV, V, VIII, and X, Stevinson, Turlock, Vernalis, Cooperstown, Mariposa, Slough, and three unnamed  $7\frac{1}{2}$ -minute quadrangles was completed and copies of the results typewritten for publication.

Final computations for the geodetic positions for the San Juan, Morgan Hot Springs, Gilroy Hot Springs, San Antonio Valley, Romain, Westley, Black Gulch, Kern, Vernalis, Gerber, and Oso quadrangles were completed.

## WATER RESOURCES.

Water, of all the natural resources with which this state abounds, has exerted the most potent influence in bringing California to the forefront among her sister states. It was water in a little mill race among the hills that first discovered to Marshall's view the glittering gold, and it was water that enabled the miners gathered from the four corners of the earth to recover from the hillsides and canyons the golden treasure hidden there. Water has converted the barren desert into fruitful gardens and orchards; it furnishes 500 miles of fresh water highways over which produce and merchandise valued at millions of dollars are carried annually between the communities within the state. It turns more than a thousand wheels, sending half a million horsepower of electric energy over thousands of miles of wire and operating the machines in shops, smelting ores, moving trains from city to city and through their streets and brightly lighting every city, town and hamlet.

The state was but performing a governmental duty, then, when it directed active investigation to be made of the wonderful potentialities of this abundant element—abundant we may think, yet with finite limits which will be reached in a period of time which is as but a moment in the life of a state.

## SURFACE WATER INVESTIGATIONS.

In relation to the flow of streams, there had been some research conducted by the national government, a little by the state and more by private interests (whose records are not available for public use), but none was made systematically or on a comprehensive scale. The state,

by the State Engineering Department during its existence from 1879 to 1884, gave considerable study to the subject. The United States Geological Survey began observations of stream flow in 1894, but as the appropriation for the Survey's work over the whole United States was only \$12,500, very little could be accomplished. Each year the work has extended in proportion to the funds provided; new gaging stations were established and more measurements made.

In 1903 the state legislature made an appropriation to cooperate with the United States in several lines of research and assigned \$15,000 "for the purpose of gaging streams, surveying reservoir sites and canal locations, for the conservation and utilization of the flood or stream waters of the state." An agreement was made between the Board of Examiners on the part of the state and the Director of the Geological Survey for the extension of the surveys and measurements provided for by the act. The legislature has appropriated various sums for this purpose at each succeeding session, and the cooperative agreements have been renewed each year, the Department of Engineering upon its organization in 1907, succeeding the Board of Examiners as the representative of the state.

At the time the first agreement became effective, July 1, 1903, the survey had only thirty gaging stations established throughout the entire state, and several of these were temporary, being maintained only one or two years. By 1909 the number of stations had been increased to seventy.

The extension of irrigation appearing then to be the first requisite and the prime use for the waters, the earlier efforts were directed to obtaining data for that object. Therefore, most of the gaging stations were placed at sites of prospective reservoirs or near where the streams debouched into the valleys. The result of observations made at stations so placed has been to acquire data concerning possibilities of storage as well as extensive and reliable records of the quantity and variability of the flow of all of the principal streams of the state at the mouths of their canyons.

For convenience in arranging the records of the streams in groups of correlated or adjacent units for study, the state is here divided into four drainage areas, as follows:

1. South Pacific Coast.
2. North Pacific Coast.
3. The Great Valley.
4. The Great Basin.

The first area embraces all streams flowing into the Pacific Ocean south of San Francisco Bay, including the Colorado River; the second covers those lying north of the bay.

The Great Valley between the Sacramento River and the San Joaquin Valley drainage systems, while the Great Basin area extends to all drainage basins west of the Cascade range into the "Great Basin," is that great plateau which extends from the Sierra Nevada to the Rocky Mountains, and from southern Idaho northwest over the slope of Nevada and a large part of Utah. Some of the California streams in the Great Basin empty the sea, but they either flow directly to "delta" or discharge into such lakes as Pyramid and Walker lakes, Nevada, Owens Lake and Mono Lake in California. Just of the streams having their origin in the Sierra of California each cross the State line into Nevada.

The principal drainage basins outlined within each of the above named divisions within a listing of basins have been mentioned **ENTIRE** through this paper are as follows:

#### SOUTH PACIFIC COAST AREA.

San Joaquin River  
San Diego River  
San Clemente River  
San Luis Rey River  
Santa Ana River  
San Gabriel River  
Santa Clara River  
Santa Ynez River  
Santa Maria River

The conservation and utilization of water for its various economic purposes has reached a state of development in this area probably not equaled elsewhere in the world. The extensive records obtained from the stations and measurements of the Survey have been of great value in working out the problems of economic development.

#### NORTH PACIFIC COAST AREA.

Kel River  
Mad River  
Klamath River (includes Trinity and Scott rivers):  
Smith River.

Gauge stations in these basins were not begun regularly until 1910 and have not extended over sufficient time to afford data for comparisons.

## BIG BASIN AREA.\*

Susan River;  
Willow Creek;  
Truckee River;  
Owens River;  
Walker River;  
Carson River;  
Mono Lake.

Nearly all of the waters of this area have been appropriated and further measurements would be of little interest excepting locally, so no reports of this region have been published since 1909. However, further data being required for studies of storage, and power, some stations have recently been reestablished.

## GREAT VALLEY AREA.

Sacramento Valley;  
San Joaquin Valley;  
San Joaquin River Basin;  
Tulare Lake Basin;  
Kern River Basin.

## STREAM GAGING.

Upon all of the streams named above and upon many of their tributaries, gaging stations are established for the measurements of the water flowing at those points. On the main trunk streams and on their principal branches the stations are usually permanent in character, and observers are employed to make daily observations of gage heights. The cross section of the stream is carefully measured, and a graduated rod or staff set marked in feet and subdivisions, and with the zero generally at the surface of low water, or if it can be ascertained at the height of the lowest low water known.

Measurements of the velocity of the stream are taken at intervals, effort being made to obtain each measurement at different stages of the river, so as to obtain data for calculating the rate of flow in the stream at all stages. This is called "rating the station," and a table of the flow for each foot in height shown on the gage is prepared from these measurements and calculations and it is called a "rating table."

Several methods are used to measure the quantity of water flowing in the streams but wherever practicable the weir methods, as where the water pours over a dam is used to obtain the quantity, or the velocity method, using a current meter.

\*Goose Lake drainage basin topographically belongs to this area, but as the waters appear to pass under ground and feed Pit River, the drainage is included in the Sacramento Basin.

The current meter method is the one generally used, and by permission of the Director of the United States Geological Survey illustrations of the instruments used and their method of employment are herewith presented.

The several methods employed are fully described in the publications of the Survey, particularly in "Weir experiments, coefficients and formulas," designated as Water Supply Paper 200; "Turbine water wheel tests and power tables," as Water Supply Paper 180; and "Surface Water Supply of the United States 1907-8, Part IX," Water Supply Paper 251. These volumes may be purchased at a nominal price from the Superintendent of Documents, Washington, D. C.

The results of stream measurements are expressed in second-foot or acre-feet. A second-foot is the prism of water one foot deep, one foot wide and moving a foot of distance in a second of time. A stream flowing a second-foot, or as it is sometimes written a cubic foot per second, would fill a box a foot square and a foot deep every second, and amounts to 448.8 gallons a minute. In ordinary practice it is regarded as 450 gallons a minute.

An acre-foot of water is the quantity that would cover an acre of space one foot in depth.

One second-foot of water running continuously for twenty-four hours will cover an acre to a depth of 1.98 feet or amount to 1.98 acre-feet. For many computations it is sufficiently accurate to assume a second-foot to be equivalent to 2 acre-feet a day.

In California and some other states another unit of measurement is used called the miner's inch. This is, theoretically, the quantity of water that will flow through an orifice one inch square, placed at a certain distance below the surface. The depth below the surface, called the "head," varies in different states and in different localities in the same state.

The statutes of California require an appropriator to record a notice of his appropriation stating the quantity he claims "in inches under a four-inch pressure." Hydraulicians are agreed that pressure means "head" which is the vertical distance from the surface of still water to the center of gravity of the orifice. Under such conditions a miner's inch would be equivalent to 0.02 ( $1/50$ ) second-foot, or, in round numbers, 9 gallons a minute.

By a statute enacted in 1903, however, it is declared that a miner's inch shall be equivalent to  $1/40$  second-foot, or 11.25 gallons a minute. This contradictory statute should be repealed, and one enacted requiring all quantities to be described with definite figures; gallons for domestic use or pumping, second-feet for rate of flow and acre-feet for quantity.

The results of the observations at the gaging stations established at various points on the streams of the state are published from time to time in the bulletins issued by the Geological Survey under the title of Water Supply Papers.

These published records give the following information:

Description of station, and of its characteristics.

List of discharge measurements made on the stream above.

Table of daily gage heights at the station.

Table of daily discharges.

Table of monthly and yearly discharges and run-off.

The records obtained are of inestimable value in the study of the many problems concerning irrigation, reclamation, flood control and navigation, and have been accepted and used very extensively by engineers engaged in operations under either and all of the subjects named.

The records obtained of the flow of Sacramento River and its tributaries were also used by the United States Debris Commission and the Board of Engineers for Rivers and Harbors as a basis for the plan reported to congress for the "Control of Floods in the Systems of the Sacramento Valley and the Adjacent San Joaquin Valley," a project involving the expenditure of millions of dollars. A similar project for the same purpose was proposed several years ago, before the cooperative observations above mentioned had procured complete data. The project was based upon the best information obtainable at that time of the flood flow of the streams, but in the light of later research and from the continuous records obtained it is known that works for flood control must care for about 130 per cent more water than was formerly believed to be necessary.

A reliable record, then, of the quantity of water poured into the valley by all its streams at flood is necessary to an intelligent study of problems relating to flood control. A knowledge of the amount of low water flow is requisite in discussing means of aiding navigation.

Correct information as to the daily, monthly and annual flow of each stream and of all combined is necessary in exploiting irrigation enterprises for the ten million acres of irrigable land in the Great Valley, and other millions of acres elsewhere in the state.

In furtherance of this last named object knowledge is required, too, of the extent to which surplus water can be conserved, and the flow regulated by storage reservoirs.

### THE GREAT VALLEY OF CALIFORNIA.

Upon examining a map of California it will be seen that the state is traversed in a general northwest-southeast direction by two approximately parallel ranges of mountains. Near the shore line is the Coast Range, and along the eastern border is the Sierra Nevada. These two

ranges converge at the south, uniting at Tejon into one range, which continues thence southward, terminating in Cape St. Lucas, at the extremity of Lower California, Mexico. They also approach each other near Redding, until their foothill spurs meet, thus encircling the "Great Valley of California."

The Sierra is continuous and the Coast Range unbroken excepting where pierced by the outlet of the valley through Carquinez Straits. The watershed enclosed between the summits of the mountain ranges is estimated at 58,000 to 64,000 square miles in area, embracing about 40 per cent of the whole state. The valley proper is 400 miles in length from Redding to Tejon Pass, an average of 40 miles in width and contains more than 10,000,000 acres. The floor of the valley presents almost an unbroken plain, sloping gently from the hills toward the central axis and descending from an elevation of less than 500 feet at each end to tide water at the middle.

The drainage from the entire territory is effected by the Sacramento from the north and the San Joaquin River coming from the south, meeting at the head of Suisun Bay, whence their mingled waters are carried through Carquinez Straits and the Golden Gate to the Pacific Ocean.

The north portion of the Great Valley, which is traversed by the Sacramento River, is generally designated as Sacramento Valley, while the remainder is called San Joaquin Valley, although there is no physical line of demarkation separating them.

#### SACRAMENTO RIVER DRAINAGE.

The head of the Sacramento River is a small lake not exceeding ten acres in area, and which the geographers have not dignified with a name. It is ensconced among the pines on the south slope of Mount Eddy, one of the peaks of the Trinity Mountains, eighteen miles southwest of Mount Shasta, and at an elevation of 6,600 feet above the sea.

This tiny lakelet gives birth to a brook, which, quickly swelling to a mountain torrent, leaps down the rocky canyon in cataracts and falls as "The water comes down at Lodore," descending 3,000 feet in twelve miles. Here it is joined by Wagon Valley Creek about two miles south of the town of Sisson, and henceforth is known as the Sacramento River.

Like the Mississippi, the Sacramento has a tributary whose source is farther away than that of the main stream. Pit River rises in Modoc County, 180 miles above the confluence with the Sacramento, while the latter stream measures but fifty-six miles from Fountainhead Lake, above mentioned, to the junction. The South Fork of Pit River rises on the western slope of Warner Mountains at an elevation of 8,000 feet, while the North Fork begins about half a mile from the south end of Goose Lake. The "summit" dividing the lake from the head of Pit

River is so flat that it is scarcely distinguishable as a watershed, and as it is only a few feet higher than the normal high water surface of the lake, the latter has been known to flow over into the river. It is said that in 1881, during a severe north wind, the water was driven over the ridge for several hours. Goose Lake is twenty-eight miles long, extending about ten miles into Oregon, with several streams running into it at the north end. Although the south rim of the lake cuts it off from direct connection with Pit River, the lava formation probably permits water to pass with some freedom, and, forming springs within Pit River Basin, contributes to the flow of that stream. The Goose Lake Basin is included in the Pit River drainage by the investigators of the Geological Survey.

McCloud River is an affluent of Pit River, and a branch of it bearing the prosaic name of Mud Creek has its source on the south slope of Mount Shasta in Konwakiton Glacier, which lies between elevations of 11,000 and 13,500 feet above the sea.

#### SACRAMENTO VALLEY.

As before stated, the earlier measurements of stream flow were taken primarily in pursuing irrigation research, and in addition to this object, in the case of the Sacramento River, was coupled investigation of flood conditions. For these reasons the records which cover the longest series of years were taken on the streams which enter the valley at the mouths of the canyons.

The most important streams entering the valley, all of which are tributary to the Sacramento River during its course through the valley, and upon which gaging stations are maintained, with the location of such stations and the date of their establishment, are named as follows:

Sacramento River, near Red Bluff, Tehama County, 1895.

Stony Creek, near Winters, Yolo County, 1901.

Feather River, at Oroville, Butte County, 1902.

Yuba River, near Smartsville, Yuba County, 1903.

Bear River, near Van Trent Post Office, Placer County, 1904.

American River, Fair Oaks Bridge, Sacramento County, 1904.

Cache Creek, near Yolo, Yolo County, 1903.

Putah Creek, at Winters, Yolo County, 1904.

The flow of water into the Sacramento Valley as recorded at the several gaging stations above named is summarized in the following table:

TABLE 10.  
Flow of water into Sacramento Valley, October 1, 1903, to September 30, 1912.

Stream	Drainage area, square miles	Maximum flow, second-feet	Maximum monthly flow, second-feet	Maximum mean daily flow, acre-feet	Minimum monthly flow, acre-feet	Maximum annual flow, acre-feet	Minimum annual flow, acre-feet	Mean annual flow, acre-feet	Available storage capacity, acre-feet
Sacramento	10,400	278,000	254,000	4,480,000	280,000	15,900,000	6,375,000	10,846,000	51,316,000
Stony Creek	601	36,000	29,300	391,000	50	894,000	---	---	144,000
Feather	3,640	187,000	187,000	2,450,000	42,000	9,340,000	2,069,900	6,032,000	775,600
Yuba	1,220	125,000	111,000	1,060,000	17,300	4,560,000	1,126,500	3,051,800	138,000
Bear <sup>1</sup>	263	25,800	25,800	94,400	806	726,000	92,500	396,900	---
American <sup>1</sup>	1,910	119,000	105,000	1,520,000	7,320	6,480,000	1,232,000	3,772,000	---
Cache Creek	1,230	20,800	20,100	285,000	---	1,280,000	250,000	697,100	176,500
Putah Creek <sup>2</sup>	805	37,000	30,000	453,000	29	881,000	199,000	510,800	318,000
Total	---	---	---	11,000,000	378,059	---	---	25,887,000	2,868,100
Unmetered streams <sup>3</sup>	3,907	76,000	---	---	---	---	---	---	---
Valley <sup>4</sup>	4,250	25,500	---	---	---	---	---	---	---

<sup>1</sup>Record beginning 1903-4.

<sup>2</sup>Record beginning 1905-6.

<sup>3</sup>Estimated from 50 per cent runoff of rainfall recorded in area for storm of March, 1907.

<sup>4</sup>Estimated from 40 per cent runoff of rainfall recorded for storm of March, 1907.

The capacity of the Big Valley reservoir on Pit River is stated to be 3,196,000 acre-feet, but as the mean annual flow of Pit River at that point for a period of five years was 713,000 acre-feet that amount is taken as the available storage capacity of the stream at that site.

The capacity of Warm Springs Valley and Round Valley and others above Big Valley are omitted, as their storage would simply reduce the flow reaching Big Valley reservoir. To the Big Valley storage is added the storage of a proposed reservoir at Iron Canyon which is estimated at 603,000 acre-feet.

<sup>5</sup>These figures are the estimate made by the United States Debris Commission as the quantity flowing just prior to the destruction of the debris barrier below Smartsville. The maximum recorded at the gaging station was 111,000 second-feet.

TABLE 11.  
Annual flow of Sacramento River and tributaries.  
(Expressed in acre-feet for each year, 1903-4 to 1911-12.)

	1903-4	1904-5	1905-6	1906-7	1907-8	1908-9	1909-10	1910-11	1911-12	Mean

Feather -----	9,330,000	4,490,000	6,710,000	9,340,000	3,490,000	7,380,000	4,500,000	6,980,000	2,069,900	6,032,000
Yuba -----	4,100,000	2,400,000	3,630,000	4,500,000	1,590,000	3,880,000	2,670,000	3,510,000	1,126,500	3,051,800
Bear -----	538,000	315,000	561,000	726,000	188,000	3,880,000	256,000	512,000	92,500	396,000
American -----	25,046,000	2,460,000	4,762,000	5,710,000	1,450,000	4,540,000	3,540,000	6,480,000	1,232,000	3,772,000
Cache Creek -----	890,000	629,000	740,000	983,000	309,000	1,280,000	250,000	496,000	36,900	697,100
Putah Creek -----	2672,000	2475,000	583,000	691,000	199,000	881,000	228,000	483,000	56,300	510,800
Totals -----	37,229,000	21,877,000	28,621,000	36,475,000	15,284,000	32,780,000	20,711,000	28,906,000	11,102,100	25,887,000

<sup>1</sup>The "flow year" begins with the rainy season, and is registered from October 1st to September 30th, following.

<sup>2</sup>The figures for Bear and American rivers, 1903-04, and Putah Creek, 1903-04 and 1904-05 are interpolated, and are obtained as a proportion of the recorded flow of the nearest neighboring watershed. They are not assumed to be correct, but are inserted to show probable totals for the years when the record was incomplete.

NOTE.—Records since June 30, 1912, have not been published. The figures for 1911-12 are interpolated from unadjusted gage readings.

### SAN JOAQUIN VALLEY.

This valley, as heretofore stated, is the southern portion of the Great Valley of California, and constitutes a little more than 70 per cent of it. The line separating the San Joaquin and Sacramento valleys is imaginary and lies between the Cosumnes and Sacramento rivers, extending across the head of Suisun Bay to the hills on the west side. The Cosumnes River is a tributary of the Mokelumne River and is the most northerly stream whose waters run into the San Joaquin. The valley proper, from the imaginary line mentioned to its southern extremity, measures 250 miles long and 45 miles wide, embracing an area of 7,360,000 acres.

The general slope of the valley floor is downward from south to north and from the hills at each side to the longitudinal axis. The lowest line of depression or trough is marked by a succession of lakes and sloughs in the upper portion and is occupied by San Joaquin River for the lower 160 miles.

This stream enters the valley on the east side, runs northwest across the plains to the trough, and takes a direction nearly perpendicular to its former course, continuing to Suisun Bay. The valley is thus divided by the axial trough into two unequal plains, about two thirds of the whole lying on the east side.

The larger streams flowing into the valley from the Sierra are perennial, while those from the Coast Range are torrential and intermittent in flow. The streams on both sides, after emerging from the hills, run across the intervening plains to the trough at a right angle to the direction of the valley. All being sediment-bearing streams, they have built up alluvial delta fans with the apexes at the mouths of the canyons and spreading downward over the plain.

Kings River from the east and Los Gatos Creek directly across the valley have created such fans, which unite and form a "delta dam" across the trough, shutting off the drainage of the south from running into the San Joaquin excepting when the basin so created, of which Tulare Lake is the center, fills to overflowing.

In a similar way Kern River has extended its delta across the trough and joined the McKittrick hills, separating Tulare Lake basin from the south end of the valley in which Kern and Buena Vista lakes become the depository of the drainage from the hills and mountains surrounding it on the north, east and south. All of the streams entering this end of the valley are intermittent and of little importance excepting Kern River, hence the name of that stream is given to the drainage basin.

### KERN RIVER BASIN.

As stated above, this is the only stream in this region of sufficient importance to warrant a record of flow being secured. Gaging records were obtained of this stream by the State Engineering Department from 1879 to 1884. In 1893 the Kern County Land Company, which controls all of the waters of the river, established a gage at the mouth of the canyon which has been maintained ever since. The records which are furnished by the land company show that for a period of thirteen years the mean annual discharge of the stream was 683,900 acre-feet.

Other stations are maintained in the mountains by different power development companies who are engaged in or contemplate the development of power, which will be discussed later.

### TULARE LAKE DRAINAGE BASIN.

The streams flowing into the basin upon which permanent gaging stations have been maintained, named in order from south to north, with the location of the stations and the year observation began, are as follows:

Tule River, 8 miles east of Porterville, 1901.

Kaweah River, below Three Rivers, 1903.

Kings River, Red Mountain, 1895.

All of the water of these streams at low and medium stages is diverted for irrigation purposes in the valley. Only flood waters ever reach Tulare Lake.

The annual flow of these streams for a period of seven years, 1904-1911, are herewith presented in table. A description of Tulare Lake and short history of its change, from being the largest body of fresh water west of the Mississippi River to a fertile body of land a thousand square miles in extent, was included in a previous article in this report discussing the question of flood control.

### SAN JOAQUIN RIVER BASIN.

The San Joaquin River, as stated elsewhere, enters the valley from the east, flowing two thirds of the way across and then turning to the northwest, following in the trough of the valley to unite with the Sacramento River at the head of Suisun Bay. It is joined on its course by several large tributaries coming from the Sierra on the east.

Those which have been considered of sufficient importance to warrant the maintenance of gaging stations on them for a series of years, named in order as they appear from south to north, are as follows:

San Joaquin River station, established near Friant, 1907.

Merced, near Merced Falls, 1901.

Tuolumne, near Lagrange, 1895.

Stanislaus, near Knights Ferry, 1895.

Calaveras, near Jenny Lind, 1906.

Mokelumne, near Clements, 1904.

Cosumnes, near Michigan Bar, 1907.

There are several other streams which flow considerable quantities of water occasionally, but only reach the San Joaquin River in times of flood.

The record of total flow in the valley is not satisfactory as a basis for the study of the several problems under research, for the reason that reliable gagings are not available on some of the streams for an extended period of time. For example, the observations on the San Joaquin at Friant, and on Cosumnes River date back only to October, 1907, so that a complete record begins with the year 1908.

It will be observed that the tables of stream flow terminate the record with the seasonal year, 1911-12. There have been no reports of stream gagings published since 1912, and at the time these tables were compiled the adjusted records following the last report were not available.

Water Supply Papers 331, 359, 360, and 361, soon to be issued, will contain data of all streams measured up to June 30, 1913.

TABLE 12.  
Flow of Kern River.

	Discharge in second feet			Total, acre-feet
	Maximum	Minimum	Mean	
1904-05	3,039	194	756	548,000
1905-06	9,505	175	2,538	1,840,000
1906-07	4,504	433	1,606	*869,000

Cosumnes -----	148,000	638,000	463,000	8,745,000	122,000

\*Record incomplete.

NOTE.—The period 1911-12 ends June 30, 1912, being three months short of the year.

A study of the tables of stream flow herein presented reveals the fact that years of greatest flood-flows are not necessarily the wettest years or years of greatest run-off.

Also the years of greatest flow in one drainage basin is not always coincident with the greatest run-off in adjacent areas.

#### WATER POWERS.

The foregoing discussion of the flow of water into the Sacramento and San Joaquin valleys is based upon measurements taken at the edge of the valleys and is considered only with relation to the uses of the water for irrigation and navigation and to the prevention of injury resulting from floods.

It has been explained that because these were the only subjects formerly considered, the most of the research was confined to the lower reaches of the rivers. Some measurements were occasionally made, and a few gaging stations were established back toward the headwaters of the streams, particularly in the vicinity of likely sites for reservoirs.

But with the astonishingly rapid extension of the employment of the silent force of electricity in every branch of industrial activity and the equally wonderful improvements in the methods of the transmutation of this invisible, mysterious force from the latent potentiality of the rushing, leaping, tumbling mountain torrent hurrying down its rocky way to the sea, comes an urgent need for inquiry to learn where and to what extent hydroelectric development might be available.

The increased amount of funds obtained by cooperation between the state and the United States enabled a large extension to be made in the field of operations; more extensive research was conducted and more complete data obtained.

The records compiled show that the waters of the State of California are capable of producing a vast amount of power. The present

and prospective use of power has induced capital to install some wonderful plants among the hills of the state, and the development has been so rapid that California now stands second among the states in the amount of power developed from water.

At the close of the statistical year in 1908, California had 559 installations operating 1,070 wheels which were capable of producing 466,774 horsepower. New York was the only state which could show a larger production. Including nearly 200,000 horsepower produced at Niagara with 6,513 wheels operating in 3,148 plants produced a total of 885,862 horsepower, while in Maine the output of the state was 343,096 horsepower developed by 2,797 wheels installed in 1,222 plants.

The total water power developed in the United States is placed at 5,356,680 horsepower.

Arranged in tabular form the foregoing figures appear thus:

TABLE 16.

State	No. plants	No. wheels	Total horsepower	Unit capacity
New York .....	3,148	6,513	885,862	136
California .....	559	1,070	466,774	436
Maine .....	1,222	2,797	343,096	123
United States .....	31,537	52,827	5,356,680	101

A comparison of the unit capacity of the plants in California and in Maine is interesting; the former producing 436 horsepower to the wheel, while the latter was only getting 123 horsepower from each wheel turned. This is explained as being due to the fact that the eastern plants are operated with low heads, while the precipitous slopes and high altitudes of the California mountains enable enormous pressures to be used. Several plants for generating electricity in the state are operated under heads exceeding 1,600 feet.

California's 1,070 wheels are distributed to every portion of the state. The following table gives their distribution in the several drainage areas, and the power they produce.

TABLE 17.

Drainage area	No. of wheels	Horsepower produced
Sacramento River .....	576	280,735
San Joaquin River .....	159	86,224
San Francisco Bay region .....	11	6,455
Southwest coast .....	74	50,183
Northwest coast .....	176	25,440
Eastern Sierra slope .....	74	17,737

The above are figures from a compilation by the United States Bureau of the Census, published in papers presented by members of

the Geological Survey, for the report of the National Conservation Commission (S. Doc. 676, 60th Cong., 2d Sess.) and reprinted in Water Supply Paper No. 234, of the United States Geological Survey.

Since those statistics were published several new hydroelectric units have been completed or construction begun, aggregating many thousands of horsepower.

The foregoing estimates relate to water powers already developed, but it is the *undeveloped* powers which concern the people of California. The power which has been developed is owned as property in fee for all time by the parties who own wheels, but not quite so with all of the undeveloped power.

Until the Water Power Commission was created in 1911 the laws of California gave, without recompense, to whoever would take it, the energy that resides in the streams of the state. Capital, seeking investment, discovered this hitherto unrecognized source of wealth and proceeded to acquire possession of it.

Happily the spoliation of the people's interest in this great natural resource was arrested by action of a patriotic legislature, before it had all been secured by private interests, as that session enacted a statute prescribing finite limits to the use of the public's water powers for private aggrandizement.

Since the state has assumed, or rather *resumed*, its right to regulate the taking and using of its waters for producing power it should acquire complete and accurate information as to the amount of power available and the location of its source; and to enable it to meet its obligations in this regard special effort has been made to extend the research conducted by the Geological Survey in cooperation with the state.

In the report of this department for 1910 a list of gaging stations then being maintained was published, showing the location of 69 stations, distributed throughout all of the drainage areas of the state excepting the northwest coast. A few measurements were made in that region during the summer of 1910 and the hope was expressed that the field operations could soon be extended to cover Russian, Klamath and intervening watersheds. During the biennial period 1911-12, thirty-four stations for observation were established in that territory.

The cooperative spirit is growing among governmental bodies, and of recent years the research conducted by the Survey has been assisted greatly by cooperation with the Forest Service in getting volunteer observers for distant points in the persons of the forest rangers.

With the organization three years ago of the State Water Commission and the State Conservation Commission—additional bodies bent upon acquiring the same kind of data that was already being col-

lected—it seemed as though much effort might be dissipated in duplicating that which had already been accomplished. But by combining the funds of all the bodies concerned, the Survey was enabled to extend its activities greatly.

In addition to the cooperative arrangement between the Survey and the Department of Engineering and the two commissions above mentioned by which a very great amount of data was secured in 1912–13, similar cooperation was effected with the city of Los Angeles for extensive work in Owens River; with the city of San Francisco for continuous observations at several points in the Tuolumne watershed.

Of the sixty-nine stations enumerated in the report of 1910, there were twenty-nine discontinued during 1911–12, but 162 new ones were added. These 202 remaining were described in the report published in 1912.

Since that date there have been sixty-five stations abolished and forty-six established, leaving 183 stations in operation at the end of the fiscal year, June 30, 1914. A complete list of these stations, with those discontinued indicated, will be found in the report of the district engineer in charge of cooperative work at the end of this article.

The extension of the field of observation by the establishing of more numerous gaging stations in the mountains, is enabling the gathering and verifying of much data as to the potentiality of the streams of the state. Observations are not made at enough points, nor have they been conducted over a sufficiently long period of time, to enable close estimates, but the indications are that the figures heretofore quoted may be verified.

The report of this Department two years ago gave a short description of the drainage basins and their physical characteristics of the main streams tributary to the Sacramento and San Joaquin valleys. A summary of the power capacities assigned to those streams as possible of development is as follows:

TABLE 18.

Drainage basin	Power possibilities without storage. Horsepower	Power with complete storage. Horsepower
Sacramento .....	2,000,000	3,000,000
San Joaquin .....	600,000	1,500,000
Other streams .....	900,000	1,500,000
Totals .....	3,500,000	6,000,000

Investigations into the water resources of the state by the United States Geological Survey in cooperation with the State of California since the last biennial report have been conducted under the charge

of Mr. M. O. Leighton, chief hydrographer until June 3, 1913, when Mr. N. C. Grover succeeded to the position with the title of Chief Hydraulic Engineer. Chief of the Water Resources Branch, United States Geological Survey, and Mr. J. C. Hoyt, Hydraulic Engineer in charge of Surface Water Division, by Mr. H. D. McGlashan, district engineer.

Their report here follows:

UNITED STATES GEOLOGICAL SURVEY, WATER RESOURCES BRANCH, IN  
COOPERATION WITH THE STATE OF CALIFORNIA.

Progress Report of Surface Water Investigations by the Water Resources Branch,  
U. S. Geological Survey for 1912-14.

By N. C. GROVER, Chief Hydraulic Engineer, and H. D. MCGLASHAN, District Engineer.

The work of the Water Resources Branch of the United States Geological Survey in California during the past two years has been largely a continuation of that reported two years ago. The cooperative funds furnished by the Conservation Commission and the Water Commission permitted this marked increase in the work of this district, beginning in August, 1911. In August, 1913, on account of the reduction in these funds, it was necessary to discontinue forty gaging stations. It has also been necessary to abandon a number of Forest Service cooperative stations during the past two years, on account of the inability of the rangers to furnish the necessary gage height observations. The following table gives the gaging stations maintained during the two-year period ending November, 1914. The \* indicates that the station is now not in operation on account of lack of funds or unfavorable conditions for accurate results.

The equipment at the gaging stations has been greatly improved during the past two years by the installation of new gaging cars, recording gages, and improved staff gages. An important feature of the work has been the installation of twelve recording gages, distributed equally in the three major drainage basins of the State, viz: Sacramento, San Joaquin, and South Pacific.

These instruments are very necessary on streams which have a considerable diurnal fluctuation or are subject to sudden and severe floods; also at locations where regular and reliable gage observers can not be secured at a reasonable cost.

Two types of recording gage are in use in this district—the Friez which furnishes a seven-day record traced upon a special sheet of cross section paper, and the Gurley which stamps the gage readings on a paper ribbon every fifteen minutes. The latter gage operates for several weeks without attention.

The essential features of these installations are a gage house to protect the instrument from the weather, a float well which supports the gage house, and an intake pipe which connects the stream with the well in order that the elevation of the water surface in the well may be the same as that of the stream. As a rule the gage house is built of wood and the well lined with timber. At exposed locations reinforced concrete has been used in order to afford the necessary protection from floods. This is a permanent and very satisfactory type of installation.

The natural conditions in southern California are very unfortunate for securing accurate stream flow records. The streams have heavy grades and are subject to excessive floods which result in marked changes in channel. For the most part the stream beds are composed of sand or gravel and are very unstable at all stages. In order to eliminate this shifting of channel, artificial controls have been installed at several of our gaging stations. They consist usually of a concrete cut-off wall extending across the channel just below the gage. The object of these controls is to make the gage readings a correct index of the discharge. These experiments have proved very satisfactory and have greatly increased the accuracy of our records.

At the request of the city of San Francisco, this office, on May 1, 1914, took charge of all their stream gaging work in connection with the Hetch Hetchy project. The plans are to measure the inflow and outflow at each of the proposed reservoir sites. A large amount of very valuable and interesting data will be collected on Tuolumne River and tributaries. This work is maintained in cooperation with M. M. O'Shaughnessy, city engineer, and all expenses are paid directly by the city of San Francisco.

In the administration of the work the Survey maintains the district office at 328 Custom House, San Francisco. A suboffice is maintained at 619 Federal Building, Los Angeles, for the benefit of that portion of the state.

No surface water supply papers for California have been published since your last report. Papers 330 and 331 are now in press and are expected to be available for distribution in a short time.

### UNDERGROUND WATER SUPPLY.

Contemporaneously with the inquiry into conditions affecting the flow of surface streams, investigations are being made by the hydrographic branch of the United States Geological Survey in cooperation with the state relating to underground waters.

The 45,000,000 acre-feet of water which the streams of California annually discharge into the sea and inland lakes, or lose in the porous soils of the plains, would be more than enough to irrigate all of the \*14,000,000 acres of irrigable lands in the state, if it could be conserved so as to be applied to the land when needed and in manner and quantity required. But that, for various reasons, is manifestly impossible.

\*Estimates by Prof. Hilgard and Prof. Loughridge, University of California.

Plate XXXI—A. Gage House, Feather River, Near Oroville.

B. Stream Gaging, Artificial Control. (Courtesy U. S. Geological Survey.)

When the beds of small streams are uneven, concrete sills or weirs are frequently installed.

Many of the streams—those along the northwest coast, for instance—are in regions where little or no irrigation is required, and impassable ranges of mountains bar the way to taking the water to lands needing it.

The Great Valley, embracing Sacramento and San Joaquin valleys, contains more than 10,000,000 acres of arable land, most of it benefited by irrigation, and a large part unproductive without water. The streams of this region discharge more than 37,000,000 acre-feet of water into the sea annually; because of the lack of storage possibilities most of it must ever continue to flow into the ocean. Much of the rainfall is absorbed by the soil upon which it falls and does not contribute to the visible runoff.

In southern California, where water is extremely limited in quantity and has a high agricultural value, exploration for underground sources and their development has been extensive. The high order of intelligence of the people engaged in husbandry here has enabled scientific methods to be applied, and the conservation and economical use of water for irrigation has reached a degree of refinement not surpassed anywhere else in the world.

Responding to the need for systematic study by trained minds of the conditions that would indicate the probable location and extent of underground sources of water, and matters affecting its recovery and application, this research has been prosecuted.

The first field of investigation after cooperation was established between the government and the state, was in the foothill belt of southern California (published in Water Supply Paper No. 219) followed by examinations in San Joaquin Valley, reported in Water Supply Paper No. 222. In 1909 a report was made in Paper No. 225, of research made in a portion of the Mojave Desert known as Coachella Valley. Other papers describe results of investigations made elsewhere. The inquiry into the many phases of conservation of natural resources enjoined upon the Conservation Commission led to an agreement of cooperation between the Commission and the Survey in 1912, which enabled the latter to greatly extend its activities. Also cooperation with the administration of the Los Angeles aqueduct enabled an intensive study to be made of the ground storage of waters in Owens Valley, which has been published as Water Supply Paper 294.

Studies of ground waters in the San Joaquin Valley have been concluded, and the results will shortly appear in a water supply paper. Studies of pumping in the San Joaquin Valley as a means of irrigation are in progress.

The paper promised in the last report treating of the mineral and hot springs of California has been completed and will soon be off the press.

Investigations of underground waters in the Santa Clara Valley and of Sacramento Valley have continued. The observations conducted in the vicinity of Los Angeles and San Bernardino for several years are still being made. Much of the data will soon be published.

A close study of ground waters in connection with observations of surface run-off in several southern regions is being made in the interests of municipal domestic water supply, notably in the San Diego watersheds.

The cooperative investigations in this subject during the two years ending June 30, 1914, were conducted under the direction of Mr. N. C. Grover, chief hydraulic engineer, water resources branch, and Mr. O. E. Meinzer, geologist in charge, ground water divisions, whose report here follows:

**UNITED STATES GEOLOGICAL SURVEY, WATER RESOURCES BRANCH, IN  
COOPERATION WITH THE STATE OF CALIFORNIA.**

**Progress Report of Underground Water Investigations in the State of California  
during the years 1913-1914.**

By O. E. MEINZER, geologist in charge, ground water division.

The paper of "Springs in California," by G. A. Waring and Herman Stabler, mentioned on page 176 of the Third Biennial Report of the Department of Engineering, State of California, has been at the Government Printing Office for some time. The second page-proof was received November 2, 1914, and the published report will no doubt be ready for distribution in a few weeks. It will be issued as Water Supply Paper No. 338.

The final report on the occurrence and quality of ground water of San Joaquin Valley, by W. C. Mendenhall and R. B. Dole, has been transmitted to the Director of the Geological Survey for publication as a water-supply paper. In this report the subject of the mineral quality of the ground water, with special reference to its use for irrigation, is exhaustively treated by Mr. Dole. The practicability of utilizing the more highly mineralized waters on the west side of the valley and the prospects of obtaining better water at greater depths have been investigated and are discussed in the report.

The report on pumping in the San Joaquin Valley, by Herman Stabler, is nearly complete. The completion of the San Joaquin reports has been delayed by the heavy duties thrust upon Messrs. Mendenhall and Stabler in connection with the land classification work of the survey.

An extensive study of the ground water of the Niles cone, supplied by Alameda Creek, on the east side of San Francisco Bay, has been prosecuted during the years 1912, 1913 and 1914 by W. O. Clark of the U. S. Geological Survey. The ground-water problems in this drainage basin are especially acute because of the diversions that are made by the Spring Valley Water Company and the Peoples Water Company for the municipal supplies of San Francisco and the transbay cities, and because of the extension of irrigation depending on underground sources. For many years there has been litigation between the various water users, and more is in prospect. The questions as to the area depending on water supplied by Alameda Creek and the available quantity of ground water have long been disputed. The report which was submitted by Mr. Clark and which is now in press, furnishes reliable and conclusive evidence bearing on these questions. This report will be issued by the U. S. Geological Survey as Water Supply Paper 345-H.

An investigation of the entire Santa Clara Valley has been carried on since August, 1912, by W. O. Clark simultaneously with the intensive study of the Niles

cone, which is situated in this valley. Complete information on irrigation with ground water is being obtained, and maps are being prepared similar to those made by Mr. Mendenhall in southern California.

While this general survey of the valley as a whole is in progress, special attention is being given to the vicinity of Coyote, where there has been litigation between the local irrigators and the Bay Cities Water Company. The studies in this vicinity will be conducted along lines similar to those on the Niles cone. About 500 wells are under observation and the depth to the water level in each is measured monthly or weekly.

A thorough investigation of the ground water of the Sacramento Valley south of Red Bluff has been in progress continuously since September, 1912. The work has been carried on by Kirk Bryan of the U. S. Geological Survey, assisted in 1914 by J. W. Muller, also of the survey. The important developments in irrigation with ground water in this valley during the last few years and the favorable ground water conditions make this investigation one of great importance. Complete data have been obtained as to wells and pumping plants used for irrigation, and all tracts irrigated with ground water, aggregating about 40,000 acres, have been mapped. A preliminary report, prepared by Mr. Bryan, will be sent to the Government Printing Office in a few days, and will be published as a water supply paper of the Geological Survey. The final report, which will be published as soon as possible, will be a comprehensive paper dealing in detail with all phases of the subject. It will contain a series of detailed maps and other illustrations, and also much practical advice for prospective irrigators.

In September, 1914, an investigation of the ground water of San Diego County west of the divide was begun. This investigation is being conducted by A. J. Ellis, geologist of the U. S. Geological Survey, and Charles H. Lee, hydraulic engineer, whose investigations in the Owens Valley (see Water Supply Paper 294), in the Indian Springs Valley, and on the subject of water conservation by spreading of floods (see report of the State Conservation Commission for 1912) are a guarantee of thorough work. The city of San Diego, which is vitally concerned in the water resources of this area, is cooperating financially with the U. S. Geological Survey and the State Department of Engineering in this investigation. The investigation is planned on a comprehensive basis. It will cover questions of deep water horizons, quantities stored in the valley fill, the storage capacity of the fill, etc. The ground-water work is closely coordinated with the extensive surface water investigations that have for several years been made in the county by F. C. Ebert, under the direction of H. D. McGlashan, both of the U. S. Geological Survey, and a complete report on the water resources of the county west of the divide is contemplated.

Periodic measurements of water levels and typical wells on the coastal plain west of Los Angeles, in the foothill belt east of the city, and in the San Bernardino and other valleys of southern California, were begun by W. C. Mendenhall in 1904 for the purpose of obtaining a record of water-table fluctuations and the resulting information on the relations of ground-water recharge to ground-water withdrawals. These measurements have been continued with some interruptions since 1904. During the last biennial period the work has been in charge of Mr. Ebert. The data for several years are being published in Water Supply Paper 331, and Mr. Ebert is also preparing as a separate report a compilation of all well-gage records for this area.

### IRRIGATION INQUIRY.

By authority of an act of the legislature passed in 1905 the State Board of Examiners entered into an agreement with the Director of the Office of the Experiment Stations, United States Department of Agriculture, for the prosecution of a line of inquiry relating to irrigation.

The inquiry embraced the following:

- (a) The duty of water and the factors which influence it.
- (b) Methods of irrigation employed in California with a view of securing better practice.
- (c) Best methods of organizing communities and districts so as to secure stable supply and equitable and economical distribution of the water to users.
- (d) Methods and costs of pumping.
- (e) Loss from canals through seepage, evaporation and wasteful methods, and the best means of reducing the same.
- (f) Drainage problem.

Upon the organization of the Department of Engineering in 1907, the State Engineer succeeded the Board of Examiners as the representative of the State in agreements for cooperative work with the several branches of the Government with which cooperative relations are maintained.

In the report of this department for 1908 the chaotic condition of the laws of California relating to water rights was pointed out and the need of reformation of such laws was discussed. Following up the ideas there promulgated, when the cooperation agreement was renewed for the year 1909-10, it was provided that the inquiry should include a new subject, to wit:

- (g) Methods of establishing and protecting rights to water and their effect on the best utilization of the water resources of the state.

Investigations under the first topic, duty of water, were first confined to attempts to determine the amount of water being used by irrigators in producing various crops in different localities, but in some cases the difficulty of getting correct measurements and the excessively wasteful methods of application gave results of but little value.

Later, records of the use of water were obtained from commercial irrigating companies which were more reliable. In cooperation with the University of California, experiments were made at the University Farm at Davis under conditions created for the purpose, so that the results give more exact information. Cooperation was effected with the Turlock Irrigation District and with farmers and orchardists in different sections, so that the field of observations has included many of the actual conditions confronting the irrigator, and the results obtained should be of practical benefit.

The extended field covering the investigations into the duty of water afforded greater opportunity for the study of methods of irrigation as well. The question of organization of communities has been exhaustively studied. Methods and costs of pumping have received careful attention and much valuable information has been obtained. Losses of

water in transit from source to orchard or field has been studied, as well as the drainage problem in connection with irrigation.

Research in the last topic, methods of establishing and protecting rights to water, etc., supported by the advocacy of this department for some means of settling water rights, contributed to the influences which brought about the creation of the Conservation Commission and the Water Power Commission. These commissions joined in the cooperative investigations, and thus made possible a broader and more thorough inquiry into these matters.

The resulting consensus of the work of these several agencies had much to do with the creation by the legislature in 1913 of a Water Commission under whose administration it is hoped and believed that order will be brought out of the present chaotic condition of water rights in this state.

Closer relations have been effected between the Office of Experiment Stations and the University of California, which has greatly assisted in all of the cooperative investigations.

During the last biennial period the studies of the subject of the duty of water has been continued along the lines described in the report two years ago, but with some important additions, notably observations in the rice fields, and on private fields of alfalfa and grain throughout the valley, and of orchards, beets and other crops.

Another feature of the irrigation inquiry pursued during this biennial period has been with the purpose of determining the proportion of total annual irrigation required for any subdivision of the year, concerning which practically no information has been published, and yet it is a matter that the Department of Engineering has felt a great need for in making investigations of irrigation district projects for the bond commission. It is not sufficient to know that a tract of land will require irrigation to a certain depth, but it is requisite to know how much of the total amount will be required each month. In the investigations made for the bond commission above referred to it was found that in some localities only 2 per cent of the annual supply of water was required in some months while in others nearly 40 per cent was used. Of course the monthly percentages vary in different localities according to climate, soil, crops and other varying conditions. To become authentic the data concerning this subject must be obtained over a long series of years, but that presented in this report is commended as a beginning in what is conceived to be a branch of research of great importance.

Much study has been given to the matter of land settlement. Experience has shown that raw land, particularly arid land, can not be developed by the ordinary homeseeker. He is usually a man of limited

or no means and it requires time and effort to bring his "homestead" to the productive stage, and while waiting for that time he and his family "must live" or starve.

Several methods of giving aid to the settler have been or are being tried in foreign lands possessing large undeveloped areas. The studies made of this subject will probably be made the subject of bills to be presented at the coming session of the legislature.

The many phases of the great question of irrigation which have been inquired into by the Irrigation Inquiry are two numerous for extended review here and the reader is referred to the very able report here following made by Mr. Frank Adams, irrigation manager in charge:

**PROGRESS REPORT OF IRRIGATION INVESTIGATIONS CONDUCTED BY THE OFFICE OF EXPERIMENT STATIONS, UNITED STATES DEPARTMENT OF AGRICULTURE, IN COOPERATION WITH THE STATE OF CALIFORNIA, AND THE UNIVERSITY OF CALIFORNIA AGRICULTURAL EXPERIMENT STATIONS, 1912-1914.**

By FRANK ADAMS, irrigation manager, in charge.

There have been no radical changes in the conduct of the cooperative irrigation investigations in California during the biennium ending November 30, 1914. The scope of the work, however, has been somewhat widened through the establishment of a more definite relationship to the University of California Agricultural Experiment Station. While since 1901 the California irrigation investigations of the Office of Experiment Stations have been conducted from office quarters furnished by the College of Agriculture of the University of California, it has only been during the past few years that financial support has been given by the University of California. Not counting an university allotment for irrigation instruction at the University Farm at Davis, the University of California Agricultural Experiment Station is contributing \$4,700 to the cooperative fund for the fiscal year 1914-15, in addition to joining in irrigation studies in Imperial Valley (through the division of agronomy) and in studies in orchard irrigation (through the division of pomology) now being started. In place of the former agreements between the Director of the Office of Experiment Stations and the Director of the University of California Agricultural Experiment Station, which have covered participation by the university, equal privileges and responsibilities with those assumed by the Office of Experiment Stations and the California State Department of Engineering are now extended to the University of California Agricultural Experiment Station through tri-party agreement; and subject, of course, to the administrative heads of the cooperating agencies involved, the one in charge of cooperative irrigation investigations in California for the Office of Experiment Stations and the California State Department of Engineering thus definitely becomes charged with responsibility also on behalf of the University of California.

**IRRIGATION RESOURCES.**

The last of the biennium ending November 30, 1912, was largely devoted to the completion of the studies of irrigation resources of California and their utilization, the expense of which was borne largely by the State Conservation Commission. That study was primarily intended to present a perspective picture of irrigation in California, thereby aiding in the general educational movement aimed toward bringing about the passage of a modern water law for this state. The full reports of the irrigation resources were printed in the report of the State Conservation Commission and a summary of the reports on irrigation resources, together with reports of the use of water on six typical stream systems of the state, were printed in Office of Experiment Stations Bulletin 254, United States Department of Agriculture. Both reports carried the colored irrigation maps of the state that had been prepared to

Plate XXXII. Water Measuring Devices, University State Farm, Davis.  
(Used in experiments to determine the duty of water.)

accompany them, and Bulletin 254 also carried larger scale irrigation maps, in color, of the six typical stream systems. Four thousand copies of the State Conservation Commission report and 5,000 copies of Office of Experiment Stations Bulletin 254 were issued, both reports having been mainly distributed within California.

#### IRRIGATION LEGISLATION.

Other than the reports of the irrigation resources of California and of their utilization referred to above, this office has made no special studies of irrigation legislation in California during the past two years. It has, however, cooperated with the State Conservation Commission in making known the purposes of the water commission bill that was presented by the Conservation Commission and passed by the legislature of 1913. In cooperation with the State Association of Irrigation Districts it has also aided in the framing and enactment of amendments to the irrigation district law.

#### IRRIGATION DISTRICTS.

A special study of California irrigation districts that has been in progress for some years has been completed so far as concerns the districts formed under the original Wright law, and an historical statement regarding each of the old Wright districts has been placed on file in the office of the State Department of Engineering at Sacramento. A summary of all of these statements, which is intended to present in brief form the history of the early irrigation district movement in California, together with statements regarding all existing or proposed California irrigation districts, is now in course of preparation and will be submitted as supplementary to this progress report.

In the fall of 1913 the study of California irrigation districts was extended to include all of the irrigation districts of the western states. Complete field data have been gathered from all of these districts and as soon as they can be worked over they will be prepared for publication in the form of a general report on irrigation districts in the western states and on the operation of the various district laws that those states have enacted.

Belief in the ultimate wide use of the irrigation district form of organization in this state has frequently been expressed by those in charge of irrigation investigations in California and referred to in the previous biennial statements submitted to the Department of Engineering. That this belief has been justified seems clear from the number of new districts that have been formed or proposed during the past two years. The recent amendments to the California irrigation district law have without doubt greatly added to its efficiency, and when the state is given even wider powers that it now possesses in aiding and protecting irrigation districts, increased advantages to the districts and increased protection to holders of irrigation district securities are bound to accrue.

#### DUTY OF WATER DETERMINATIONS.

During the seasons of 1913 and 1914 the largest single effort has been directed to studies of the duty of water for alfalfa on a large number of farms in Sacramento Valley. These studies have been supplemental to experiments on the duty of water for alfalfa at Davis, that have now been carried through five seasons. It was felt that no matter how conclusive the results of the experiments at Davis might be, a broad basis for conclusions could only be obtained by supplementing the work at Davis with observations on typical farms throughout the valley. In 1913 work was done on 14 farms at Gridley, 9 farms at Los Molinos, 5 farms at Orland, 12 farms at Woodland, and 7 farms at Dixon, a total of 47. The work at Gridley during 1913 disclosed the fact that the ground water there is so close to the surface that observations of the movement of soil moisture applied by irrigation could be of little value. For that reason the Gridley farms were omitted from the studies in 1914. It was also necessary to eliminate the work at Dixon during 1914 on account of lack of funds. It was possible, however, to include Willows in 1914, so that the work during 1914 was carried on as follows: Los Molinos, 11 farms; Orland, 8 farms;

Willows, 6 farms; Woodland, 13 farms; total, 38 farms. Several of the farms at Woodland, Orland, and Los Molinos on which observations were made in 1913 were dropped in 1914 and some others added. This revision was made after the Bureau of Soils of the United States Department of Agriculture and the Division of Soil Technology of the College of Agriculture of the University of California had completed their soil survey of Sacramento Valley and disclosed the prevailing types of soil. Where it was found that important soil types had been omitted in the studies in 1913, several farms having such types were included in 1914. On the other hand, where it was found from the reclassification of the soils that certain types were unnecessarily duplicated, fields with those types that were least favorable for satisfactory results were omitted.

In these studies of the duty of water for alfalfa that have been made on Sacramento Valley farms during the past two years the water applied has been carefully measured by agents of this office and the yields of alfalfa have been ascertained by the same agents in the most practicable manner feasible. In a large number of instances the alfalfa hay has been baled, so that the yields have been ascertained with exactness. In other cases it has been necessary to estimate the yields by measuring the stacks. In other cases still the number of shocks of hay have been counted and a certain number weighed to get the average weight per shock. In a few instances full loads of hay have been hauled to scales. Great care has been exercised in all of the ascertainment of yield and the figures given can be taken as within narrow and reasonable limits of accuracy.

While earlier studies of the duty of water throughout the west have been largely confined merely to measurements of the amounts of water applied, it is now fully recognized that in California at least a point has been reached when studies must be carried sufficiently beyond that point to indicate what becomes of the water applied. Accordingly, determinations of soil moisture in the field have been made before and after each irrigation on as many fields as the funds available would permit, in all some 15,000 soil moisture determinations having been made during 1914 alone. The method followed has been to make borings with a 3-inch soil auger to depths of 6 feet, with 200-gram samples of soil taken in the center of each foot. In 1914 all of the samples have been forwarded to the laboratory at Davis for moisture determinations. In some cases borings have been made to a depth of 12 feet.

Full field reports of the work on the Sacramento Valley farms during 1913 and 1914 are not yet in, so that a complete statement of results will not be ready for publication until some time during the winter. Tables, however, are given below showing the amounts of water applied and the yields of alfalfa in tons for all of the fields under observation during 1913 and 1914, explanations and discussions of them being withheld for the later publication. In the later discussion the relation of the results on the farms to the results at Davis during the past five years will be fully considered, but pending the complete presentation, those having use for the tables will find profit in comparing the results on the farms away from Davis with those obtained at Davis, which are given in brief elsewhere in this report.

## EXPERIMENTS AT DAVIS.

During the past two years the scope of the irrigation investigations on the irrigation tract at the University Farm at Davis has been materially broadened to include somewhat extensive studies of soil moisture distribution following irrigation. Soil moisture determinations have been made before and after the irrigation of each crop, the depth of soil sampling having varied from 6 to 12 feet. From these results it is possible to show what becomes of the water applied; that is, the depth of penetration, the resulting increase in moisture percentages, and the acre-inches of water taken from the soil per acre in producing the unit weights of the crops grown. As heretofore, the studies at Davis have been under the immediate direction of S. H. Beckett, irrigation engineer in the Office of Experiment Stations and Assistant Professor of Irrigation Practice in the University of California. During the past two years Mr. Beckett has been assisted by O. W. Israelsen, assistant in irrigation, University of California, and Roy Wray.

*Alfalfa Investigations.*—A summary of the results of these investigations during 1910, 1911, and 1912 was submitted in November, 1912, and printed in the third biennial report of the Department of Engineering. This summary included a diagram showing the respective yields of alfalfa from unirrigated land and from applications of 1, 1.5, 2, 2.5, 3, 4, and 5 acre-feet per acre of irrigation water. Since the continuation of these investigations during 1913 and 1914 has made some changes in the results, the diagram heretofore published has been revised and is submitted herewith, together with a new table giving all of the figures for the five years. It will be noted that, as in the case of the work for 1910, 1911, and 1912, the averages for the 5-year period show but little if any increase in yield on fields that have received in excess of 2.5 acre-feet of irrigation water per acre per season. While in the years of more than normal rainfall the seasonal yields have increased on all of the fields, in no case has it been found economical to apply more than 2.5 acre-feet per acre per year. The cost data assembled in the table indicate that in some cases the larger yields have resulted in a net loss. A 3-year record has been obtained on a small plat to which water has been applied at the rate of 5 acre-feet of water per acre per year. Both the diagram and table show that the use of so much water has been of no avail, and inspection of the field indicates that the crop is being rapidly drowned out and supplanted by a rank water grass.

A full discussion of the results of the alfalfa studies at Davis will be withheld to accompany the discussion heretofore referred to of the results on the farms elsewhere in Sacramento Valley. It can be stated at this time, however, that results to date indicate that it is uneconomical to the individual farms to apply more than 2.5 acre-feet of water per acre per annum on the sandy loams of the Sacramento Valley where the crop grown is alfalfa; and, without undertaking at this time to make definite comparison between the results at Davis and results on the other farms under observation, it can be stated that, on the average, the figures obtained away from Davis substantiate those obtained at Davis.

The period covered by the alfalfa studies at Davis shows a variation in winter precipitation from a minimum of 8.85 inches in 1912-13 to a maximum of 27.8 inches in 1913-14, averaging for the five years 16.36 inches.

NOTES.—Labor of production figured at \$2.25 per ton. Water figured at \$1.70 per acre-foot. Labor for irrigation figured at 50 cents per acre per irrigation.  
Seasonal rainfall: 1909-10, 11.90 inches; 1910-11, 23.80 inches; 1911-12, 9.46 inches; 1912-13, 8.85 inches; 1913-14, 27.80 inches.

*Grain Investigations.*—In the fall of 1911 a portion of the experimental area at Davis then seeded to alfalfa was turned under and a rotation of field crops started. It was not intended to make a study of the proper rotation of field crops, but rather to study the duty of water under rotation practice. Including two seasons before the experiments under rotation were started, barley investigations have now extended over five seasons, while studies of duty of water on wheat have been in progress since 1912. The results to date are assembled in the two tables given below. The yields in hay and grain, values, irrigation cost, and depths of water applied are the averages for the entire period.

TABLE 30.

Summary of results of duty of water investigations with barley at Davis, 1910-1914; average rainfall, 16.36 inches.

Number of irrigations	Depth of water applied, inches	Yields in pounds per acre		Total value grain at \$1.25 per 100 pounds	Average cost of irrigation per acre at 25 cents per acre-inch
		Hay	Grain		
0 -----		2,426	940	\$11 75	
1 -----	5.70	4,272	1,593	19 92	\$1 45
2 -----	11.10	5,380	2,170	27 12	2 75

TABLE 31.

Summary of results of duty of water investigations with wheat at Davis, 1912-1914; average rainfall, 15.76 inches.

Number of irrigations	Depth of water applied, inches	Yields in pounds per acre		Total value grain at \$1.50 per 100 pounds	Average cost of irrigation per acre at 25 cents per acre-inch
		Hay	Grain		
0 -----		2,703	637	\$9 55	
1 -----	6.0	4,267	1,157	17 35	\$1 50
2 -----	10.1	6,100	1,529	22 94	2 52
2 <sup>1</sup> -----	15.5	5,050	1,029	15 45	3 88

<sup>1</sup>Average of 1913-1914 only.

The average rainfall for the periods covered by the above tables is slightly below the normal of 17.8 inches, yet the results in general show a profitable increase in yields with the increased amounts of water applied up to at least 10 acre-inches of water per acre in two irrigations. As might be expected, the results for the individual seasons show the greatest increases in yields due to irrigation in the seasons of least rainfall. The crop harvested in 1914, which received a seasonal rainfall of 27.08 inches, indicates a definite loss due to irrigation, the wheat crop especially showing a decided decrease in yield with the increase in the amount of water applied. In the spring irrigation of grain crops no set schedule was followed, but in each case the time of irrigation was made to fit the needs of the crop.

In addition to the grain experiments mentioned above, a small experiment was made in the fall of 1912 and the fall of 1913 in irrigating grain land before seeding, but with no further irrigation given. In 1913 a yield at the rate of 3,306 pounds of barley per acre was obtained from a plat that had received a 12-inch irrigation prior to seeding in the fall of 1912 and then a rainfall of 8.85 inches. Adjacent land which had not received the 12-inch fall irrigation produced at the rate of only 448 pounds per acre. In 1914 land which had received a 10-inch fall irrigation prior to seeding and then a rainfall of 27.8 inches yielded at the rate of 2,000 pounds of grain per acre as against 1,790 pounds per acre from the plat that had received no fall irrigation. It is proposed to continue this work over a longer period before attempting to draw final conclusions. It is evident, however, that where feasible a fall irrigation prior to seeding will prove to be very beneficial if the winter rainfall turns out to be light.

*Indian Corn.*—The studies of duty of water for Indian corn were started in 1910. Irrigation water has been applied in accordance with the needs of the crop. Owing to unfavorable conditions the 1912 crop was a failure but the results for 1910, 1911, 1913, and 1914 are given in the following table:

TABLE 32.

Summary of results of duty of water investigations with Indian corn at Davis, 1910, 1911, 1913, and 1914; average seasonal rainfall 18.16 inches.

Number of irrigations	Depth of water applied, inches	Yields of green silage, tons per acre	Total value at \$2.50 per ton	Total cost of irrigation
0		4.00	\$10 00	
1	3.3	6.22	15 55	\$1 62
2	6.0	7.48	18 70	2 75
3	9.0	8.52	21 30	4 12
4	14.0	8.42	21 05	5 90

Owing to the differences in seasonal rainfall, the figures indicate that a wide variation in seasonal yields was obtained with the application of equal amounts of water. In each season, however, and irrespective of rainfall, substantial increases in the yields have resulted from the irrigation water applied. The table indicates that, on the average, the most economical yields have been obtained by giving three irrigations averaging three acre-inches per acre each.

*Other Crops.*—Some attention has been given to the studies of irrigation of sugar beets and potatoes. The yields of sugar beets during the first seasons of observations were gratifying, a yield of 18.6 tons of beets per acre having been obtained from the use of 17.8 acre-inches of water per acre applied in three irrigations, as against only 4.85 tons per acre from the fields that received no irrigation water. During 1913 and 1914 the beet crops were almost totally destroyed by blight.

During the seasons of 1912, 1913, and 1914 a small demonstration has been made of the feasibility of following grain crops with a summer irrigated crop. The summer crops used have been corn and maize cut for green summer feed or ensilage. The

Plate XXXVI—A. Concrete-lined Canal, South San Joaquin Irrigation District.

B. Concrete Canal Lining Before Bracing and Backfilling Done, South San Joaquin Irrigation District.

maximum results show yields of 2,556 pounds of grain and of 15.4 tons of green corn ensilage per acre from the same land in one season. If means permit, further experiments along this line will be made.

#### STUDIES OF IRRIGATION OF GRAIN ABOUT WOODLAND.

1913-1914.

Although grain is not usually irrigated in Sacramento Valley, there was a total of 2,419 acres of barley, oats, and wheat watered in 1913 in the territory immediately adjacent to Woodland, due to the deficiency in the rainfall of the preceding winter. Of this, 1,884 acres were in barley, 500 acres in oats, and 35 acres in wheat. One thousand seven hundred and thirty-nine acres of barley and 300 acres of oats were watered from the Moore and lower Adams ditches of the Yolo Water and Power Company, and the remainder from pumping plants. It was possible, in connection with the alfalfa duty of water investigations, to gather data about this grain irrigation in 1913 and in many instances to supplement the data gathered in 1913 with crop yields on the same fields in 1914 without irrigation. The results are given below in some detail, and should have interest to all grain growers in Sacramento Valley. The data were gathered and analyzed by Wells A. Hutchins, field assistant.

As most of the grain land that was irrigated had not been especially prepared for irrigation there were large higher-lying areas in many fields that could not be reached by the water. In some cases straight parallel furrows were dug from field ditches, and in others the water was turned loose directly from the ditches and guided about the land. Albert Hannum's tract was very carefully prepared with a system of long furrows following the main ridges and short parallel furrows deviating from them, usually at right angles, with the result that only a small area remained unwatered. The cost of preparation of this field, including surveying, furrowing, and subsequent plowing in of the furrows, was \$1.10 per acre.

The figures on applications and cost of water were computed in most cases from the measurements of the Yolo Water and Power Company. The depths of water applied to barley ranged from .24 foot to 2.85 feet, with an average of .98 foot; to oats 1.19 to 1.90 feet, averaging 1.62 feet; and to wheat 1.03 feet; with an average depth applied to all grain of 1.11 feet. The cost of water for barley varied from \$0.36 to \$4.28 per acre, averaging \$1.48; for oats \$2.85, and for wheat \$1.54; with a general average of \$1.76 per acre.

The yields from most of the irrigated barley fields, ascertained usually from the growers, ranged from 10 to 37 sacks per acre, averaging 23 sacks; of oats 1.5 to 2.5 tons of hay, averaging 2.2 tons; and of wheat 1.3 tons per acre. The few figures gathered on unirrigated barley showed a range of from practically nothing to 13 sacks per acre, with an average of probably 8 sacks per acre. Thus with an expenditure of only \$1.76 per acre for water and probably an equal amount for labor and preparation for irrigation, the yields of grain in this dry year were more than doubled.

Owing to heavy rainfall in the winter of 1913-1914 there was only one grainfield irrigated in this section in 1914, that of L. P. Jones, who applied .58 acre-foot per acre on 12 acres of barley about June 1, at a cost for water of \$0.88 per acre, with a resulting yield of 12 sacks per acre, the low yield being attributable to lateness of seeding and to lack of thoroughness of preparation. The yields in 1914 from 1,424 acres of the area irrigated in 1913 ranged from 9 to 40 sacks of barley per acre, with an average of 22 sacks per acre.

The normal precipitation at Davis during the period November to May, inclusive, is 15.96 inches. During that period in 1913 the rainfall was 7.20 inches, and in the corresponding period in 1914, 28.04 inches. Thus with 7.20 inches of rainfall in 1913 unirrigated grainfields yielded only about 8 sacks to the acre, while with a total of 20.52 inches of combined rainfall and irrigation water, and with a relatively small additional expenditure, the yield was more than doubled and was made to equal the yield in 1914, a season of abundant precipitation and normal growing conditions.

## STUDIES OF RICE IRRIGATION IN SACRAMENTO VALLEY.

During the past three or four years, and largely through the leadership of the Bureau of Plant Industry of the Department of Agriculture, rice has been added to the important California agricultural products. Many inquiries have been received by us regarding the proper irrigation of this crop and to put us in possession of information needed to answer these inquiries, studies have been made of rice irrigation in Sacramento Valley in conjunction with work there on the duty of water for alfalfa. During 1912 and 1913 the work of the Office of Experiment Stations in this connection was confined to measurements of the amount of water applied to rice fields and studies of the preparation of land for rice irrigation and of the application of water to the crop. Beginning with 1914 an agreement was entered into between the Office of Experiment Stations and the Bureau of Plant Industry under which cooperative experiments are being conducted on and adjacent to the rice experiment station of the Bureau of Plant Industry near Biggs. It is too early to publish the results of the studies on the rice experiment tract at Biggs, but an outline of what is being done there, together with such information as has been gathered by our agents from the rice growers of Sacramento Valley, and also a statement of the general conditions under which rice is being irrigated, is given below. Such work as the Office of Experiment Stations has done in this connection has mainly been carried on by Ralph D. Robertson, irrigation engineer, and the data given below are from a report of work done and of observations made by him.

The first planting of rice and the first experimental work in growing rice in Sacramento Valley were started in 1909 by the Bureau of Plant Industry, United States Department of Agriculture. Experimental work was carried on in 1910 and 1911 and the production of rice on a commercial basis was started in 1912, when there were approximately 1,200 acres planted. In 1913 the area given over to rice culture was 6,000 acres and in 1914 approximately 15,000 acres, the latter distributed as follows: Butte County, 11,000 acres; Colusa County, 3,100 acres; Yuba County, 600 acres; Glenn County, 150 acres; Sacramento County, 100 acres; Yolo County, 70 acres.

The most essential requirement in the growing of rice aside from suitable soil and climate is the assurance of an abundant and unfailing water supply, especially in the late summer months when the crop is maturing. Soon after planting rice develops into an aquatic plant and requires water throughout the growing season. The irrigation season is divided into two periods, according to the growth of the plant and the amount of water applied. Under present practice in the first period water is applied four to six times to sprout the seed and to keep the soil thoroughly moist, without having water standing on the field. There may be seasons when there is sufficient moisture in the soil to germinate the seed without irrigating, but as a rule the practice is to apply water every seven to ten days, to keep the soil from drying out. Rice growers in Butte County state that probably the most critical operations in the irrigation of rice are the first and second waterings. It is essential that when these are given the fields shall be rapidly drained. According to the growers this is due to the danger of rotting the seed if the water is allowed to remain on the field.

When the rice is from four to six inches high, which is usually from four to six weeks after the time of planting, water is turned on and the fields are kept submerged until the grain is in the milk and well formed, which is from ninety to one hundred twenty days after initial submergence. A small flow of water is run into the checks continually and a common practice is occasionally to drain off a small amount of the water, the idea in this being to keep fresh water on the rice. This tends to prevent stagnation and also serves to replenish the water lost through evaporation, which is sometimes as much as one-half inch per twenty-four hours. The depth to which the fields are kept flooded is from 3 to 5 inches, and in some cases as high as 8 inches.

As already indicated the largest area devoted to rice in Sacramento Valley is in Butte County, in the vicinity of Gridley, Biggs, and Richvale. Water is delivered to the rice fields in this territory by Sutter-Butte Canal Company, the supply being taken from Feather River about 10 miles above Gridley. A large branch lateral diverts from the main canal northeast of Biggs and carries water in a northeasterly direction to the vicinity of Richvale, from whence it is distributed in numerous laterals. A pumping station has been established by the Richvale Land Company about .75 mile west of Richvale, where water is pumped out of Sutter-Butte Canal and thence distributed by gravity.

To secure water for rice under Sutter-Butte Canal it is necessary to locate a water-right on the piece of land it is desired to irrigate, which becomes appurtenant to the land. The initial cost is \$10 per acre, and the annual rental charge for rice is then \$5 per acre. The water-right contract calls for a continuous flow of one cubic foot per second for each 53.33 acres, or three times the amount stipulated for alfalfa. No attempt has been made to measure water to irrigators, but the general practice has been to allow all the irrigators could use. This has resulted in an extravagant use of water.

As already stated, independent measurements were made by the Office of Experiment Stations in 1912 and 1913 to determine the use of water on rice fields in Sacramento Valley. In 1912 the net duty of water obtained on one 50-acre field near Biggs was 5 acre-feet per acre. Measurements in 1913 on a few fields near Gridley, where much water was wasted, showed the total amount used for the season to be 7.5 acre-feet per acre.

The cooperative rice irrigation experiments begun in 1914 in conjunction with the Bureau of Plant Industry were made on a field of 39.48 acres in section 35, T. 19 N., R. 2 E. The total amount of water used in 1914 in maturing the crop was 4.65 acre-feet per acre. This probably represents the minimum use of water on rice in the territory served by Sutter-Butte Canal. It is realized that results for a single year can not be accepted as final and it is hoped the studies can be continued.

The field on which the above measurements were made was planted April 15th and first irrigated April 30th. Previous to June 12th, when the field was submerged, there were six irrigations and the total depth of water applied up to June 12th was 1.04 acre-feet per acre. During these six irrigations an average head of 6 to 12 cubic feet per second was used in flooding the field. A good moisture content was maintained in the soil, but no water was allowed to remain on the field. From June 12th to October 11th a uniform depth of about 4 inches was constantly maintained on the field. The average flow during this 121-day period of submergence varied from .50 to .75 cubic foot per second. Occasionally a small amount of water would be removed from the field, but the stream in each case was too small to be measured and the 3.61 acre-feet per acre which was applied during the flooded period of growth may be taken as the net amount used during this time. Measurements of the water applied were made by means of a 2-foot Cipolletti weir installed at the entrance to the field where readings were taken daily. The field is divided into 7 contour checks, the largest of which comprises 11 acres. The difference of elevation between the checks is 3 inches. Water is admitted into the higher check and from there in turn passes into lower checks through boxes placed in the levees. The interior levees were made with a ridger and have a base of 3.5 feet and are 12 inches in height. No levelling was required on the field and the cost of making levees was less than \$1 per acre. The cost of plowing, harrowing and dragging in preparing the seed bed was \$4 per acre. The soil is black adobe underlain with hardpan and is typical of the area devoted to rice culture in the vicinity of Biggs and Richvale.

With the data now at hand it is estimated that a duty of 5 to 6 acre-feet per acre is sufficient to mature a crop of rice in Sacramento Valley, at least with more careful use of water and better preparation of land. In Louisiana and

Arkansas the amount of water pumped for rice is from 1.25 to 2 acre-feet per season. To this, however, should be added the rainfall, which may be from 10 to 20 inches during the growing period. The rainfall during the growing season in Sacramento Valley is practically negligible and, moreover, the humidity of the atmosphere is also much less than in the southern states, thereby necessitating a greater use of water here.

When sufficient water can be obtained by low lifts from wells or from river channels, it is feasible to pump water for rice. With the prevailing prices of either distillate or electric power in Sacramento Valley, the cost of pumping will be in the neighborhood of 4 to 5 cents per acre-foot of water lifted one foot high. If the water is lifted 20 feet the cost will thus be from 80 cents to \$1 per acre-foot, or \$4 to \$5 per acre irrigated if 5 acre-feet are applied. Pumping water for rice is widely resorted to in the southern states, but owing to different conditions it is difficult to make a comparison of costs with those that might obtain in California. In Louisiana and Arkansas steam plants are used, in which wood, coal, or oil is used for fuel. The Office of Experiment Stations has made investigations covering the cost of pumping water for rice in the southern states.\* The average cost of pumping at well plants tested in Louisiana was \$6.67 per acre irrigated, with an average lift of 20 feet, while in Arkansas the average cost was \$11.61 per acre, with a lift of approximately 40 feet. These costs are based on the pumping of 1.25 acre-feet per acre.

One very important factor in the irrigation of rice is to have the land well prepared to receive water. The fields in Butte County are prepared by the contour method, the checks ranging in size from 2 to 12 acres, and averaging about 5 acres. The size of the checks will naturally depend upon the fall and topography of the land, but as a rule a difference of elevation of 3 to 5 inches between checks will be found satisfactory. The outside levees should have a base of at least 6 feet, a width on top of 2 feet, and be from 2 to 2.5 feet high. The most satisfactory levees are made with a Fresno scraper, although the interior levees can often be made more cheaply with a "crowder" or "pusher." There are various forms of land levelers on the market that do satisfactory work. The cost of preparing land varies largely with the individual field. There are numerous fields around Gridley and Biggs where levees have been made at a cost of \$1 per acre and no levelling was required. On other fields the cost of preparing land has been about \$10 per acre. The cost probably should not exceed \$15 per acre in other sections where rice may be grown.

#### IRRIGATION PUMPING PLANTS IN CALIFORNIA.

According to the irrigation census taken in 1910 under cooperative agreement between the Bureau of the Census and this office, 9,297 irrigation pumping plants were in operation in California in that year. Since then there has been a large increase in that number, especially during the dry season of 1912 and 1913. In order to ascertain approximately what that increase has been, letters were addressed to the principal manufacturers, or their state representatives, whose irrigation pumping plants have been installed in California, care being taken to avoid duplications. Replies were received from all but three of the dealers addressed, although a few of the replies received were stated to be merely conservative estimates. It is realized that some of the installations reported replaced old plants. On the other hand, some of the smaller dealers who handle irrigation pumping plants in California have undoubtedly not been included. Counting that the replacements and the omissions about equal each other, and further counting 1,500 plants as having been installed by the larger dealers who did not respond, at the close of the season

\*U. S. Department of Agriculture, Office of Experiment Stations Bulletin No. 201.

of 1914 the figures for the entire state stood approximately as given in the table below:

*Irrigation Pumping Plants in Woodland Area.*—While studying the duty of water for alfalfa in the Woodland section during 1913 and 1914, Mr. Wells A. Hutchins, field assistant, took a complete census of the irrigation pumping plants now operating within the area. While the data are somewhat detached, a tabular summary of them is included herewith because it is believed that the data will have value both as showing the extent and character of this form of irrigation development in an important portion of Sacramento Valley, and as furnishing information of local value to the people about Woodland. It will be noted that in spite of the general improvements in the Cache Creek irrigation system recently brought about by the Yolo Water and Power Company, a total of 74 pumping plants, indicating that pumping and gravity irrigation systems develop together, have been installed there since January 1, 1911. Many plants that were installed prior to January 1, 1911, are no longer in use, either having been worn out or superseded by the gravity system.

## COST OF IRRIGATING AND HANDLING ALFALFA IN SACRAMENTO VALLEY IN 1914.

Records were kept in 1914 of the cost of irrigating and handling alfalfa in the sections of Sacramento Valley where alfalfa duty of water determinations were being made. The items included covered the cost of cutting, raking, shocking, stacking and baling. The average total cost of the first four of these items was \$1.88 per ton. The cost of baling in Sacramento Valley ranges from \$2 to \$2.25 per ton. The prevailing prices of labor in Sacramento Valley are \$2 to \$2.50 per day per man and \$1 per head for stock. The usual price for a man applying water is 25 cents per hour. The full data, with averages for the separate sections and for all of them together, are summarized in the table below.

It should be borne in mind that it is not fair to compare the total irrigation and handling cost per acre for the various sections covered in the investigation without analyzing the data contained in the tables for each particular section. For instance, the highest cost per acre was at Woodland, due principally to the higher charge there for water. The lowest cost was at Willows, where it was found more profitable to pasture the fields after two or three crops had been removed. The cost of applying water at Orland was about double that in other sections, owing to the larger number of irrigations given there. The usual price received for alfalfa in 1914 was \$4 per ton for loose hay and \$6.50 per ton for baled hay.

TABLE 36.  
COST OF IRRIGATING AND HANDLING ALFALFA, SACRAMENTO VALLEY, 1914.

## INVESTIGATIONS IN SOUTHERN CALIFORNIA.

As heretofore reported, irrigation investigations in southern California are conducted through a special field division under the immediate direction of Mr. C. E. Tait, irrigation engineer. During a portion of the biennium Mr. Tait has been assisted by Wells A. Hutchins, field assistant, and Frank J. Veihmeyer, assistant irrigation engineer. Cooperative relations have been established with the Imperial Valley Experimental Farm of the University of California, of which Walter E. Packard, working under the direction of Professor J. W. Gilmore, head of the division of agronomy of the College of Agriculture, is superintendent. The following data regarding work in southern California are taken from a report submitted by Mr. Tait:

*Investigations of Duty of Water in Imperial Valley.*—Experiments were begun early in 1914, in cooperation with the University of California, to measure the duty of water in Imperial Valley and to determine what becomes of the water applied in irrigation. It is the intention that these experiments shall cover a period of two or more years for each crop studied. The field work during 1914 has been conducted by F. J. Veihmeyer, assistant irrigation engineer, working in conjunction with Walter E. Packard, superintendent of the Imperial Valley Experiment Station of the University of California.

It is generally realized that a knowledge of the duty of water in Imperial Valley is of much value, not only to that section but to others in California and throughout the southwest. Land holdings there are large and water is comparatively cheap, consequently much of the irrigation in the past has been carelessly done. This section has some peculiar conditions not generally found in the irrigated districts throughout the West. The soils are tight and they take water slowly. The irrigation season extends throughout the year. The summers are very hot, the atmosphere is dry, and evaporation is excessive. With rather meagre information regarding the water requirements of plants in such a country, the contracts between the California Development Company and the Imperial mutual water companies established 4 acre-feet per acre as the limit of average use of water in the territories of the mutual companies. The United States Government accepted this standard in fixing the requirements for making final proof for the lands under the Desert Act. A few years ago Imperial Water Company No. 1, in order to expand its irrigated area, amended its by-laws, making 4 acre-feet sufficient for  $1\frac{1}{4}$  acres of land. The economical use of water is to be urged in view of danger of damage to the land following an excessive use of water, the possibility of extending the irrigated area without increasing the supply of water, and the direct saving to the land owners in the purchase of water.

In 1906 the average use of water on 120,000 acres of land under Imperial water companies Nos. 1, 4, 5, and 7 was 2.04 acre-feet per acre. At that time a large portion of the land was growing barley as a temporary crop. Much of the barley has now given place to alfalfa, cotton, and cantaloupes. Many of the barley growers use only 1 acre-foot per acre, as shown by the water company charges. Alfalfa requires more water than any other crop, and the company records indicate that from 3 to 4 acre-feet is used for its production. The change from grain to alfalfa has brought an increased use of water and the average duty in 1913 was approximately 2.25 acre-feet per acre. It has also brought about a different distribution of the water throughout the year. During the early period the maximum use was in March, when alfalfa, barley, melons, and almost every crop grown except corn was given water. The maximum use in 1913 was in July, when alfalfa must be given a plentiful supply.

It is fortunate that the maximum use of water in Imperial Valley so nearly corresponds with the peak of the annual flow in Colorado River, which occurs year after year, without fail, during the latter half of June.

Mr. R. S. Carberry, superintendent of Imperial Water Company No. 1, states in his annual report for 1912 that seventeen typical farms in the No. 1 territory were selected from which to determine the duty of water for the leading crops, as shown by the companies' water deliveries. The averages in acre-feet of water applied per

acre were: Alfalfa, 4.19; corn, 2.18; cantaloupes, 1.62, and barley, 1.00. Imperial Water Company No. 7 determined the average amount used for alfalfa in its district during 1913 from the water charges to be from 3.5 to 4 acre-feet per acre.

Imperial Valley has a great range of crops that can be grown and some uncertainty yet remains as to what will become established, but alfalfa will no doubt continue to be one of the standards.

The measurements on duty of water now being conducted are primarily to measure the amounts applied to alfalfa, although some measurements may be secured for other crops without interference with the measurements for alfalfa. The tracts selected for measurement represent the several predominating types of soil. The water applied to each tract is being measured in the supply ditch by weir or rating flume, with recording instrument giving a continuous record. Some difficulty was experienced in selecting tracts to fulfill all the requirements. It was desirable to work only on tracts where the alfalfa was to be cut for hay. A large majority of the alfalfa in Imperial Valley is pastured. It was necessary that the proper conditions for measurement be found in the supply ditch.

The procedure followed in the Imperial Valley duty of water studies is similar to that followed in duty of water studies in Sacramento Valley. In addition to water measurement, each tract has been surveyed and platted, and the following is being noted: Time and duration of each irrigation; size of stream used per "land" or border check; time required for water to reach lower end of land; drainage facilities, appearance of crop, etc.

In order to ascertain the disposition of the water applied, the percentage of moisture in the soil is being determined for each tract on which the water applied is being measured. Borings with soil auger are made at the upper, middle, and lower portions of two lands on each tract before and after each irrigation. Soil samples are taken at the middle of each foot in depth from these holes down to the sixth foot, or farther if moisture extends below that depth. The percentage of moisture is found by weighing and drying the soil samples, the percentage being calculated on the basis of the weight of the dry soil. The experiments are now being conducted on the farms of John Waterman, W. C. Stearns, Allen Davison, J. W. Smith, and C. R. Wheelock.

*Investigations of Water Companies.*—The investigation of mutual water companies conducted for several seasons with interruptions due to other work has been continued and extended to cover public service companies supplying water for irrigation.

*Investigations of Wells and Seepage in Imperial Valley.*—Two special investigations were conducted in Imperial Valley during the winter of 1913-14, one being the collection of data on the wells and underground waters of the valley and Colorado Desert, and the other a general survey of the valley to secure accurate information on the cause and extent of seeped or water-logged lands which were apparent in certain localities. The purpose of each investigation was twofold; each furnished results of public interest and scientific value as independent projects, while at the same time each was a desirable preliminary to the more extended work being begun on duty of water and soil moisture. The full data on seepage conditions are being held for further study in connection with other investigations, but a summary of the data is given below. The full report on wells, with map, is submitted as an appendix hereto. This report has been prepared under the direction of Mr. Tait by Wells A. Hutchins, by whom the field investigations were made.

The investigations of injury from excessive irrigation water in Imperial Valley were carried on under the direction of Mr. Tait by Frank J. Veihmeyer, assistant irrigation engineer, in conjunction with Walter E. Packard, superintendent of the Imperial Valley Experimental Farm of the University of California. The purpose was to gain a knowledge of the action in the soil of the water applied by irrigation, with a view to determining the best method of so using water that danger will not result.

The crops in certain portions of Imperial Valley have been injured by the formation of a water table, or by saturation of the soil and subsoil. Certain sections, as the slope near the mesa along No. 5 canal on the east side of the valley, and the

bluffs on the west side of Mesquite Lake basin, showed an outcropping of moisture and resultant excess of alkali before irrigation began. In some of these originally affected areas benefit has resulted from irrigation through washing the salts downward, while some of the lands on the edge of the Mesquite Lake basin which were unfit for agricultural purposes in their desert state are now also growing crops. But along No. 5 canal, and in some other places, the application of water, together with seepage from the canal, has apparently aggravated the trouble.

Numerous studies have been made of the soils of Imperial Valley and their character is well known. As pointed out by Mr. Tait, the land was formed as the delta of Colorado River and consequently the soil had its origin in the fine particles of silt which had been carried a long distance by a sluggish current. This accounts for the tightness of the soil and lack of ability to take up moisture readily. The tight soil predominates through the central portion of the valley, but as the slopes are approached on both the east and the west sides, the soil grades to a more sandy type, owing to the intermingling of mountain wash with river sediment.

From the data gathered by Mr. Tait and Mr. Veihmeyer both the clay and the clay loam soils of Imperial Valley have been found to be deficient in absorptive power, while even the loose, sandy soils are so fine in texture that they do not take up moisture as readily as sandy soils elsewhere in the arid region. They have found that moisture sometimes does not reach more than 18 or 24 inches deep in the hard soil after irrigation has been followed for an entire season. On the other hand, it frequently reaches to depths of 10 feet or more in the soft soils. Where the movement of the irrigation water depends on a subsoil of such varying degree of porosity, it is evident that the same method of irrigation should not be followed on all land, but that each type of soil should receive a special treatment. Thus it appears, as Mr. Tait points out, that a knowledge of the subsoil and of the movement of irrigation water should be regarded by the irrigator as invaluable. Land owners know from experience that the hard soils do not retain moisture long and that they must be irrigated frequently with small amounts of water to maintain a proper and uniform condition for good crop production. On the other hand, they find that the intervals between irrigations may be much longer in the case of the soft soils, provided a plentiful amount of water is applied. Thus far most of the irrigators have been guided mainly by the condition of the crops grown and by what is apparent on the surface only; they seldom have any definite knowledge of the condition of the subsoil or the depth to which irrigation water penetrates it.

In reviewing the report of investigations by Mr. Veihmeyer, Mr. Tait advises that in Imperial Valley, as elsewhere, a surface layer of soft soil underlaid with a hard layer may absorb moisture until there is an accumulation or surplus on top of the hard layer, completely saturating the lower portion of that top layer. If water continues to be applied in excess or at a rate greater than the downward movement, this local water table rises. If it approaches to within 2 or 3 feet of the surface and the surface becomes dry, moisture will arise by capillarity and bring with it alkali. This condition exists in some of the localities investigated.

Mr. Tait finds that the damage to the lands in the district supplied by Imperial Water Company No. 5 is due in part to a condition which existed before irrigation was practiced and in part to seepage from the east side canal. Moisture absorbed from rainfall on the east mesa, he states, apparently percolates westward, following the slope of strata which bring it to or near the surface along the canal. The soils there are of the sandy type, the surface generally being overlaid by a hard stratum. This hard stratum arrests the downward movement of seepage water from the canal itself and the water must find an outlet at the surface on the slope below the canal.

Throughout most of Imperial Valley, however, Mr. Tait finds that trouble of the nature described above has not been experienced. He states that if water can be applied to the land in amounts sufficient to produce a good growth of plant and crop, yet so sparingly as to prevent an accumulation of moisture in any part of the subsoil, there need be no fear of damage to lands throughout the valley by seepage and alkali; while those areas that have been damaged in a large measure through

a natural condition existing without irrigation may be reclaimed by special methods.

The problem of preventing seepage of land and its resultant damage by alkali is very largely one of the proper and economical use of irrigation water and it was in this relation to the use of water that this investigation was undertaken by Mr. Tait. The information obtained should enable a more intelligent application of water than has been practiced heretofore, and it gives a record of a condition, to be checked by further investigation in the future, which will plainly determine whether the damage is merely of local nature and extent in certain portions of the valley or whether it will likely become general.

*Irrigation Development in Southern California.*—In connection with other duties in irrigation investigations, an effort is made to keep in touch with the general progress of California irrigation development. Mr. Tait submits the following statement from southern California:

"Among the more important developments now in progress in southern California are the activities of a number of the cities toward securing increased water supplies for future growth and for leasing water for irrigation until its use by the cities becomes necessary. The largest of these undertakings, the Los Angeles aqueduct, is now completed. The aqueduct furnishes enough water for the irrigation of 135,000 acres of land on the basis of 1 miner's inch for 7.5 acres, the average duty of water near the city, where the crops include citrus, deciduous and small fruits, walnuts, garden truck and alfalfa. Plans for the utilization of the water brought by the aqueduct from Owens River have not matured as rapidly as was anticipated, but steps are now being taken by land owners in San Fernando and other valleys adjacent to the city to perfect district organizations for the use of the water by irrigation.

"San Diego is now engaged in a movement to secure a more adequate water supply for the future. The reservoir and distributing system of the Southern California Mountain Water Company have been purchased by the city. This includes Moreno and Upper and Lower Otay reservoirs and Barrett reservoir site on which the city may construct a storage dam. Plans are now being discussed for the purchase of water rights, reservoir sites and rights of way for making the surplus flood waters of San Diego and San Luis Rey rivers available for use by the city.

"Santa Barbara is another city that has adopted the policy of building in advance of actual necessity. A tunnel to serve the dual purpose of collecting seepage waters and of a conduit for water from Santa Ynez River to Santa Barbara, was recently completed through the Santa Ynez range. Gibraltar dam is now being constructed on the river to impound flood waters which may be drained through the tunnel to the city and valleys bordering Santa Barbara Channel.

"No irrigation projects of great magnitude have been instituted in the coastal region during the past two years, but interest has been stimulated in the storage of flood waters in connection with flood protection. Storm waters are spread over the the gravel beds stretching below the canyons of the more important streams to bring about the absorption of the waters to augment the subterranean reservoirs being drawn on by pumping from wells. This kind of storage is practiced on Santa Ana River and on Lytle, San Antonio, and Santiago creeks, and similar work is contemplated for San Gabriel and San Jacinto rivers. This work has resulted in much benefit to the agricultural sections relying on underground waters fed from these streams for irrigation. The possibility of impounding flood waters by dams in mountain canyons is being seriously discussed for San Gabriel River and streams in San Diego County."

The irrigated area continues to be gradually extended by the installation of new pumping plants by small cooperative companies and by individuals. Figures furnished by manufacturers of pumps indicate that about 3,000 pumping plants have been installed in the eight southern counties since 1910. Localities where development of this kind is most conspicuous are San Jacinto Valley, West Riverside, Chino, Ventura County and several valleys in San Diego County. Lands in the mountain or elevated orchard districts, such as Victor, Antelope, Yucaipa, and other valleys situated at elevations of 2,500 to 4,000 feet above sea level, are being rapidly

settled or taken up under the Desert Act. Settlers in Victor Valley are making concerted effort to secure government aid for the reclamation of their lands and to consummate a plan for turning the water stored by Arrowhead Reservoir to their lands on the Mojave Desert.

The largest addition to the irrigated area of southern California during the past two years is in Palo Verde and Imperial valleys, where water for irrigation is taken by canals from Colorado River. Palo Verde Valley now has its canal system constructed to cover 45,000 acres and the Palo Verde Mutual Water Company reports that about one half of this area is now being irrigated. Extensions to the canal system of Imperial Water Company No. 5 and the construction of a system by Imperial Water Company No. 3 are adding 100,000 acres to the area already reclaimed in Imperial Valley. This land should receive water within a few years.

Improvement in the character of construction of irrigation works is conspicuous. Some of the canals now being constructed in Imperial Valley are being lined with concrete, a practice that has heretofore been considered too costly for that region. The pumping districts near the coast have been benefited by reductions in rates for electrical power and by the extension of service lines of power companies giving more competition. Gasoline, distillate, and oil engines have been much improved within the last few years and they now permit the use of low grades of fuel oils, giving power for pumping at small cost. Turbine and deep well pumps have been perfected and adapted to the requirements of high pumping lifts, with benefits to sections where the ground water has receded.

#### MISCELLANEOUS DATA ON DUTY OF WATER.

Below are given a number of tables summarizing data on the duty of water in California that have been gathered from time to time, either through original investigation by this office or by search of reports of other investigations. Part of the figures given have already been printed in reports of this office; they are included, however, in order to have assembled in one report all such data collected to date.

TABLE 37.

Summary of miscellaneous data on gross duty of water.  
Measurements by Irrigation Investigations unless noted otherwise.

Location and source of supply	Year	Acreage	Gross duty, acre-feet per acre	Notes
Shasta Valley:				
Little Shasta River.....	1912	4,498	4.20	Meadow and pasture.
Modoc County:				
Pit River Ditch and Dam Co. <sup>1</sup> .....	1910	950	4.16	Alfalfa, 300 acres; grain, 300 acres; meadow, 350 acres.
Lassen County:				
Lassen Irrigation Co. <sup>1</sup> .....	1910	5,000	2.34	Mostly alfalfa.
Owens Valley:				
Owens River Canal <sup>2</sup> .....	1904	7,000	2.19	Alfalfa, grain, grass.
Bishop Creek Canal <sup>2</sup> .....	1904	8,000	4.31	Alfalfa, 1,500 acres; grain, 1,200 acres; pasture, 4,000 acres; orchards, 60 acres; miscellaneous, 1,240 acres.
Farmers' Canal <sup>2</sup> .....	1904	1,800	5.79	Alfalfa, 500 acres; pasture, 1,300 acres.
McNally Canal <sup>2</sup> .....	1904	7,000	2.69	Mostly grass.
Bishop Creek Association <sup>2</sup> .....	1904	6,600	1.23	
Rawson Canal <sup>2</sup> .....	1904	4,000	2.88	
Dell Canal <sup>2</sup> .....	1904	1,300	5.95	Alfalfa, grain, grass.
Owens River and Big Pine Canal <sup>2</sup> .....	1904	4,000	4.31	Alfalfa, 1,600 acres; pasture, 1,700 acres; grain, 700 acres.
Stevens Canal <sup>2</sup> .....	1904	2,400	2.58	Alfalfa, grain, grass.
Average.....			4.82	
Owens River <sup>2</sup> .....	1909	3,010	8.60	Alfalfa, grain, truck, vines, and miscellaneous.
Placer County:				
South Yuba Water Co. <sup>1</sup> .....	1909	6,900	7.74	Deciduous fruits.
Bear River Water Co. <sup>1</sup> .....	1909	5,000	5.82	Deciduous fruits.
Gold Hill Water Co. <sup>1</sup> .....	1909	2,000	4.02	Deciduous fruits.
Sacramento Valley:				
South Feather Land and Water Co. ....	1912	1,200	5.53	Oranges, olives, and deciduous fruits.
Palermo Land and Water Co. ....	1912	1,900	6.06	Oranges, olives, peaches, and garden truck.
Sutter-Butte Canal Co. ....	1912	14,000	7.53	Rice, alfalfa, deciduous fruits, and miscellaneous.
Stony Creek Irrigation Co. <sup>4</sup> .....	1908	703	6.94	Mostly alfalfa.
Orland Project <sup>4</sup> .....	1910	703	6.82	Mostly alfalfa.
Orland Project <sup>4</sup> .....	1911	2,663	14.72	Mostly alfalfa.
Orland Project <sup>4</sup> .....	1912	4,230	8.05	Mostly alfalfa.
Orland Project <sup>4</sup> .....	1913	6,616	6.12	Mostly alfalfa.
Sacramento Valley Irrigation Co. <sup>6</sup> .....	1910	3,448	9.80	Mostly alfalfa.
Sacramento Valley Irrigation Co. <sup>6</sup> .....	1911	5,800	6.02	Mostly alfalfa.
Colusa Irrigation Co. <sup>1</sup> .....	1909	300	3.08	Alfalfa.
Moore Canal.....	1907	6,958	3.15	Mostly alfalfa.
San Joaquin Valley:				
Modesto Canal.....	1904	6,895	13.18	Alfalfa, deciduous fruits and miscellaneous.
Modesto Canal <sup>6</sup> .....	1905	10,500	7.42	Alfalfa, deciduous fruits and miscellaneous.
Modesto Canal <sup>6</sup> .....	1906	12,685	6.93	Alfalfa, deciduous fruits and miscellaneous.
Modesto Canal <sup>6</sup> .....	1907	14,020	9.61	Alfalfa, deciduous fruits and miscellaneous.
Modesto Canal <sup>6</sup> .....	1909	22,130	6.85	Alfalfa, 16,306 acres; orchards, 561 acres; vines, 2,404 acres; miscellaneous, 2,865 acres.
Modesto Canal.....	1912	38,217	3.85	Alfalfa, orchards, vines, grain, garden, beans, and corn.
Turlock Canal.....	1904	20,000	8.84	Alfalfa, deciduous fruits and miscellaneous.

<sup>1</sup>Data from census 1910.<sup>2</sup>Measurements by U. S. Geol. Survey.<sup>3</sup>Measurements by C. H. Lee.<sup>4</sup>Data from U. S. Recl. Service.<sup>5</sup>Data from company.<sup>6</sup>Data from district.

TABLE 37—Continued.

Summary of miscellaneous data on gross duty of water.  
Measurements by Irrigation Investigations unless noted otherwise.

Location and source of supply	Year	Acreage	Gross duty, acre-feet per acre	Notes
Turlock Canal <sup>a</sup> -----	1905	28,100	4.66	Alfalfa, deciduous fruits, and miscellaneous.
Turlock Canal <sup>a</sup> -----	1906	32,587	6.32	Alfalfa, deciduous fruits, and miscellaneous.
Turlock Canal <sup>a</sup> -----	1907	47,803	3.95	Alfalfa, deciduous fruits, and miscellaneous.
Turlock Canal <sup>a</sup> -----	1909	47,843	4.84	Alfalfa, 27,136 acres; orchards, 5,458 acres; vines, 4,796 acres; miscellaneous, 10,453 acres.
Turlock Canal <sup>a</sup> -----	1910	64,791	1.95	Alfalfa, 41,845 acres; orchards, 6,143 acres; vines, 4,235 acres; miscellaneous, 12,538 acres.
Turlock Canal <sup>a</sup> -----	1911	71,106	3.45	Alfalfa, 49,751 acres; orchards, 6,295 acres; vines, 3,802 acres; miscellaneous, 11,258 acres.
Turlock Canal-----	1912	93,900	2.52	Alfalfa, orchards, vines, potatoes, grain, melons, corn, and miscellaneous.
Madera Canal-----	1912	10,597	2.68	Alfalfa, orchards, and miscellaneous.
Oakdale and South San Joaquin Canal-----	1912	3,550	9.53	Alfalfa, orchards, and gardens.
Miller & Lux canals-----	1912	55,700	2.46	Alfalfa, 15,000 acres; grain, 3,700 acres; pasture, 39,000 acres.
James pump, Fresno Slough-----	1912	4,402	.58	Alfalfa, 1,232 acres; grain, 2,561 acres; pasture, 111 acres; other, 498 acres.
Helm Ditch-----	1912	1,550	1.18	Alfalfa, 950 acres; grain, 600 acres.
San Joaquin and Kings River Canal	1912	163,350	2.75	Miscellaneous crops.
Blythe Canal-----	1912	8,000	3.08	Pasture.
East Side Canal-----	1912	45,500	2.05	Alfalfa, 2,250 acres; grain, 1,000 acres; pasture, cropped, 3,705 acres; deciduous orchards, 175 acres; vines, 15 acres; miscellaneous, 4,355 acres; flooded grazing land, 35,000 acres.
Patterson pump-----	1912	6,290	2.00	Alfalfa, deciduous fruits, citrus fruits, grain, orchards and alfalfa, orchards and miscellaneous. Record of diversion 's close approximation.
East Side Canal-----	1909	6,000	3.45	Alfalfa, grain and miscellaneous.
Kern County:				
Farmers' Canal, Kern County <sup>b</sup> -----	1909	7,000	7.95	Alfalfa, grain and miscellaneous.
Wasco, Fourth Extension Canal <sup>b</sup> -----	1940	1,940	2.58	Alfalfa, grain and miscellaneous.
Santa Clara Valley:				
Pioneer Canal-----	1904	900	3.34	Mostly prunes and alfalfa.
Pioneer Canal-----	1912	200	4.39	Mostly prunes and alfalfa.
Statler Canal-----	1904	1,961	1.58	Mostly prunes and alfalfa.
Sorosis Canal-----	1904	3,021	1.75	Mostly prunes and alfalfa.
Sorosis Canal-----	1912	150	2.67	Mostly prunes and alfalfa.
Kirk Canal-----	1912	415	2.29	Mostly prunes and alfalfa.
Paul Masson Canal-----	1912	45	7.67	Mostly prunes and alfalfa.

<sup>b</sup>Data from district.

TABLE 37—Continued.

Summary of miscellaneous data on gross duty of water.  
Measurements by Irrigation Investigations unless noted otherwise.

Location and source of supply	Year	Acreage	Gross duty, acre-feet per acre	Notes
Santa Clara River Valley:				
Camulos Ditch .....	1912	40	1.27	Alfalfa, 150 acres; deciduous fruits, 190 acres; citrus fruits, 60 acres.
Hardgrave & Comfort Ditch.....	1912	470	5.50	Alfalfa, 315 acres; citrus fruits, 5 acres; miscellaneous, 350 acres.
Pirn Water Co. ....	1912	376	3.77	Deciduous fruits, 160 acres; citrus fruits, 216 acres.
South Side Improvement Co.....	1912	1,400	1.76	Deciduous fruits, 700 acres; citrus fruits, 700 acres.
Stringtown & Carmiele Ditch.....	1912	350	5.87	Alfalfa.
Sespe Land and Water Co.....	1912	40	15.10	Alfalfa.
Fillmore Irrigation Co.....	1912	1,674	2.00	Alfalfa, 58 acres; deciduous fruits, 119 acres; citrus fruits, 1,497 acres.
Hardison Ranch Co. ....	1912	109	1.39	Alfalfa, 2 acres; citrus fruits, 90 acres; vineyard, 2 acres; miscellaneous, 15 acres.
Turner Ditch .....	1912	187	7.98	Alfalfa, 12 acres; deciduous fruits, 62 acres; citrus fruits, 74 acres; beans, 37 acres; miscellaneous, 2 acres.
Atmore Ditch .....	1912	150	4.65	Alfalfa, 110 acres; deciduous fruits, 25 acres; citrus fruits, 15 acres. Seasonal flow estimated.
Interurban Land and Water Co. (Carmiele Ditch) .....	1912	1,112	1.34	Alfalfa, 350 acres; deciduous fruits, 380 acres; citrus fruits, 354 acres; beans, 28 acres.
Santa Clara Water and Irrigation Co. (Farmers' Ditch).....	1912	1,734	2.70	Alfalfa, 10 acres; deciduous and citrus fruits, 348 acres; beans, 896 acres; miscellaneous, 116 acres; other, 334 acres.
Interurban Land and Water Co. (River Street Ditch).....	1912	1,536	2.32	Alfalfa, 260 acres; deciduous fruits, 1,266 acres; citrus fruits, 20 acres; beans, 50 acres.
Santa Paula Water Works.....	1912	1,628	1.89	Deciduous fruits, 880 acres; citrus fruits, 748 acres.
Santa Clara Water and Irrigation Co. (Saticoy division) .....	1912	4,414	1.42	Alfalfa, 173 acres; deciduous fruits, 374 acres; citrus fruits, 155 acres; beans 3,691 acres; miscellaneous, 111 acres.
Santa Ana River Valley:				
Old Town Ditch .....	1912	2,700	2.45	Citrus fruits.
Crafton Water Co. ....	1912	1,800	2.43	Citrus fruits.
Bear Valley Mutual Water Co.....	1912	15,060	2.00	Citrus fruits.
City Creek Water Co.....	1912	320	2.11	Citrus fruits.
Average .....			2.11	
McKenzie Ditch .....	1912	432	2.04	Alfalfa and truck.
Shay Ditch .....	1912	175	3.71	Alfalfa and truck.
Warm Creek .....	1912	200	6.45	Mostly alfalfa.
Average .....			3.50	
Fontana Development Co. et. al..	1912	15,000	1.31	Citrus fruits, 12,800 acres; alfalfa, 800 acres; miscellaneous, 1,400 acres.
Average .....			1.31	

TABLE 37—Continued.

## Summary of miscellaneous data on gross duty of water.

Measurements by Irrigation Investigations unless noted otherwise.

Location and source of supply	Year	Acreage	Gross duty, acre-feet per acre	Notes
Riverside Water Co. ....	1912	9,300	2.91	Citrus fruits, 4,500 acres; alfalfa, 3,900 acres; miscellaneous, 258 acres; other, 342 acres.
Jurupa Canal .....	1912	785	2.96	Citrus fruits, 120 acres; alfalfa, 465 acres; miscellaneous, 200 acres.
Gage Canal Co. ....	1912	9,249	1.83	Citrus fruits. Diversion estimated.
Alvitzes Ditch .....	1912	800	3.43	Alfalfa and truck.
Average .....			2.44	
Lower Legage Ditch .....	1912	150	4.01	Mainly alfalfa.
Upper Legage Ditch .....	1912	75	4.00	Mainly alfalfa.
Durkee Ditch .....	1912	300	4.00	Mainly alfalfa.
Fraser Ditch .....	1912	100	4.00	Alfalfa and truck.
Euqua Ditch .....	1912	200	3.00	Alfalfa.
Average .....			3.76	
Santa Ana River Valley:				
Santa Ana Valley Canal .....	1912	17,000	1.91	Citrus fruits, walnuts, apricots, and miscellaneous.
Anaheim Union Canal .....	1912	13,000	2.07	Citrus fruits, walnuts, and miscellaneous.
Average .....			1.93	
Southern California:				
California Domestic Water Co. ....	1909	10,000	2.17	Oranges, lemons, and walnuts.
Euclid Avenue Water Co. ....	1909	165	1.30	Oranges.
Imperial Valley:				
Colorado River <sup>7</sup> .....	1906	127,423	1.89	Barley, 102,000 acres; alfalfa, 13,500 acres; cantaloupes, 1,175 acres; grapes, 450 acres; miscellaneous, 10,298 acres.
Imperial Water Co. No. 17 .....	1903	70,000	1.81	Alfalfa, barley, vines, corn, and truck.
Imperial Water Co. No. 17 .....	1910	90,911	2.60	Alfalfa, 43,503 acres; grain, 27,064 acres; vines, 1,539 acres; miscellaneous, 18,835 acres.
Imperial Water Co. No. 17 .....	1911	99,372	2.76	Alfalfa, 44,232 acres; grain, 28,897 acres; vines, 1,352 acres; miscellaneous, 25,051 acres.
Imperial Water Co. No. 17 .....	1912	160,681	3.16	Alfalfa, 47,116 acres; grain, 26,241 acres; vines, 926 acres; miscellaneous, 26,393 acres.
Imperial Water Co. No. 17 .....	1913	100,681	3.35	Alfalfa, 59,279 acres; barley, 19,257 acres; corn, 12,983 acres; cotton, 4,741 acres; melons, 3,125 acres; asparagus, 341 acres; vines, 910 acres; other, 75 acres.
Imperial Water Co. No. 47 .....	1903	15,000	1.62	Cantaloupes, alfalfa, barley, corn, and truck.
Imperial Water Co. No. 47 .....	1913	17,500	3.38	Cantaloupes, alfalfa, barley, corn, vegetables, and fruits.
Imperial Water Co. No. 57 .....	1906	25,000	2.62	Alfalfa, corn, and barley.
Imperial Water Co. No. 57 .....	1913	47,925	4.21	Alfalfa, cotton, corn, barley, and miscellaneous.
Imperial Water Co. No. 67 .....	1913	17,900	2.95	Barley, cotton, corn, and alfalfa.
Imperial Water Co. No. 77 .....	1906	10,000	2.13	Alfalfa and diversified.
Imperial Water Co. No. 77 .....	1913	16,000	3.82	Alfalfa, 75 per cent; remainder diversified.
Imperial Water Co. No. 87 .....	1913	24,000	3.74	Alfalfa, 50 per cent; melons, cotton, corn, barley, and grapes.
Imperial Water Co. No. 127 .....	1913	12,000	2.51	Cotton, 50 per cent; alfalfa, barley, and corn.
Imperial South Side Water Co. <sup>7</sup> .....	1913	16,000	2.73	Alfalfa, 50 per cent; corn, cotton, and barley.

TABLE 42—Continued.

Summary of miscellaneous data on net duty of water for miscellaneous crops.  
Measurements by Irrigation Investigations unless noted otherwise.

Location and source of supply	Year	Acreage	Depth of water applied, feet	Notes
Santa Clara Valley:				
Pumping plants -----	1904	2,272	1.13	Miscellaneous fields crops and deciduous fruits.
Kirk Ditch Co. -----	1912	412	1.60	Mostly orchards.
Pajaro Valley:				
Pumping plants -----	1909	776	3.75	Berries; duty estimated.
Salinas Valley:				
Salinas River and wells -----	1899			
	1900	1,316	1.32	Sugar beets.
Salinas River -----	1900	353	1.23	Sugar beets.
Santa Clara River Valley:				
Pumping plants -----	1912	2,471	.55	Six pumping plants. Walnuts, 893 acres; beans, 752 acres; citrus fruits, 826 acres.
Southern California:				
Pomona Irrigation Co. <sup>2</sup> -----	1906	2,500	.39	Citrus fruits, 50 per cent; deciduous fruits and diversified.
Pomona Irrigation Co. <sup>2</sup> -----	1907	2,500	.44	Citrus fruits, 50 per cent; deciduous fruits and diversified.
Pomona Irrigation Co. <sup>2</sup> -----	1908	2,500	.51	Citrus fruits, 50 per cent; deciduous fruits and diversified.
Pomona Irrigation Co. <sup>2</sup> -----	1909	2,500	.48	Citrus fruits, 50 per cent; deciduous fruits and diversified.

<sup>2</sup>Data from company.

#### MISCELLANEOUS DATA REGARDING TIME OF DIVERSIONS.

In connection with recent duty of water and other irrigation studies a considerable amount of information has been collected showing the monthly diversions of canals and the monthly use of water by irrigators. As such information is of value to those planning irrigation systems, whether for a project or a farm, a summary of it is given in the tables following. The data for canals are from representative systems extending from Shasta to Imperial valleys; those for individual farms are from Sacramento Valley only. A number of years should of course be covered to make the data conclusive because use changes from year to year with the wetness or dryness of the seasons.

TABLE 43.  
Summary of miscellaneous data on monthly diversions of canals.  
Measurements by Irrigation Investigations unless noted otherwise.

Location and canal	Year	Average irrigated	Total acre feet diverted	Per cent of total water diverted each month												Crops irrigated, acres
				January	February	March	April	May	June	July	August	September	October	November	December

Mutual Water Company <sup>11</sup>	1904	-----	302,708	7	6	8	8	9	7	9	9	8	9	11	9	
Imperial South Side Water Company <sup>11</sup>	1913	16,000	44,708	4	5	8	9	10	11	13	13	9	6	5	5	Alfalfa, 50 per cent; corn, cotton, barley and miscellaneous.

In some cases Shasta Valley ditches reported diverted small quantities of water in both March and October.

<sup>1</sup>Data from irrigation census 1910.

<sup>2</sup>Data from U. S. Reclamation Service.

<sup>3</sup>A negligible quantity diverted in February.

<sup>4</sup>Data from district.

<sup>5</sup>Data from company.

<sup>6</sup>Included in main canal, San Joaquin and Kern River Canal and Irrigation Company.

<sup>7</sup>Diversions for some ditches estimated for September and for all ditches for October.

<sup>8</sup>Company record.

<sup>9</sup>Only about 4 acre-feet used, the balance returned to the river.

<sup>10</sup>Data from company or companies.

In addition to the above, a bulletin on irrigation and soil conditions in the Sierra Nevada foothills, by R. D. Robertson, Irrigation Engineer, Office of Experiment Stations, and J. W. Nelson, Assistant Professor of Soil Technology, University of California, is now ready for printing by the College of Agriculture of the University of California.

## PRESENT STATUS OF IRRIGATION IN CALIFORNIA.

After sharing in the over expansion in irrigation development which occurred throughout the West following the passage by Congress of the Reclamation Act of June 17, 1902, California during the past two years has in the main settled down to a process of readjustment and of waiting for settlement to catch up with irrigation construction. While no complete figures of increases are available for any part of the state, it is quite certain that outside of a few localities the additions to the irrigated acreage during the past two years have been below the normal of the preceding decade. The increase in the irrigated acreage in California from 1899 to 1909 was at the rate of about 122,000 acres per year, making the total area irrigated in 1909, 2,644,104 acres. Our studies of irrigation resources in 1912 showed a total area irrigated that year of 3,192,646 acres, indicating that the rate of increase from 1909 to 1912 was above the preceding ten-year normal.

The increase since 1912 in the irrigated area in northern California has not been large, nor have any very extensive additional areas been brought under ditch during the past two years in that part of the state. The main construction improvements during the period have been on Cache and Stony creeks. On Cache Creek dams have been completed at Capay and at the outlet of Clear Lake near Lower Lake. Besides this, Adams Canal has been lined with concrete for a distance of two miles beginning at Capay dam. Winters Canal, on the opposite side of the creek, has been lined for a distance of 5 miles to the intake of Madison Canal. The Moore section of the Yolo system has been lined for a distance of about 3 miles, beginning about one mile below Moore Dam. Activities on Stony Creek have been confined to the Orland project of the Reclamation Service. Improvements on this project have mainly consisted in the building of a supply canal  $6\frac{1}{2}$  miles long to carry the drainage of Stony Creek to East Park Reservoir, which is located on Little Stony Creek. This additional water supply has made it possible to increase the area of this project from 14,000 to 20,000 acres, the distribution system for which, with concrete structures, is now in course of construction. New construction on the east side of Sacramento Valley has mainly consisted of additional laterals of Sutter-Butte Canal to reach the rice lands about Biggs and Gridley. Other forward movements in northern California irrigation development since 1912 have included a reorganization of the main Susan River sys-

tem, the development of a number of wells around Big Spring in Shasta Valley, an increase in the water available for irrigation in the Placer County foothills, and the cooperative studies of Iron Canyon project and of the possibilities of Pit River irrigation development now being made under agreement between the Reclamation Service and the State Department of Engineering. In matters of irrigation institutions the most important movements have been in connection with proposed irrigation districts at Oroville, Chico, and Fair Oaks, and in the organization of the Anderson-Cottonwood district near Anderson.

There have been no large additions in central California during the biennium but some progress has been made all along the line. The largest areas brought under ditch have been in South San Joaquin and Oakdale irrigation districts, both of which began delivering water through the new works in 1914. Both Modesto and Turlock irrigation districts continued permanent improvements on the upper works and Turlock District has constructed the Davis foothill reservoir. An irrigation district has been organized at Waterford, but no plans for a system have been adopted and no construction begun. The chief interest around Merced and Madera has been the proposed organization of districts to take over the local system there. On the west side there has been much interest in irrigation from Tracy north, following the two dry years of 1912 and 1913. For a time there was much talk of an irrigation project for Tracy, Bethany, and Byron, but the only definite accomplishment has been the organization of a cooperative company at Byron which proposes to build a pumping system for several thousand acres immediately about that place. The need for irrigation in the orchard section about Oakley has come to be quite generally recognized in the past two years, and this office has assisted toward the making of definite plans there through a preliminary study and report on a proposed pumping system. The Brentwood pumping system, covering about 10,000 acres, has been completed during 1914, although little if any new settlement has occurred there under the project. In the portion of San Joaquin Valley about Fresno there has been much discussion of the coordination of all of the sections, looking to the better control of irrigation and flood waters; and about both Fresno and Bakersfield the idea is gradually developing that the systems there should be taken over by irrigation districts or other farmers' organizations.

In southern California the largest increases since 1912 have been in Imperial Valley. An extension of the canal system of Imperial Water Company No. 5 and the construction of a system by Imperial Water Company No. 3 are in process of adding 100,000 acres to the area under ditch there. The system of the Palo Verde Mutual Water Company has also been increased until it is now constructed to cover about 45,000 acres. Outside of these increases the main interest in the Colorado River sections has been in the completion of the organization of Imperial Irrigation District and the proposed formation of an irrigation district for Chuckawalla mesa. The recent overwhelming majority in favor of a bond issue of \$3,500,000 in Imperial Valley with which to purchase the system of the California Development Company seems permanently to establish Imperial Irrigation District in the minds of the valley people and the next two years should see a decided advance in the water situation there. Although the legislature of 1913 passed a special irrigation law at the instance of those furthering development on Chuchawalla mesa, an effective organization there has not yet been worked out. Completion of the Los Angeles aqueduct has brought nearer a solution of the problem of utilizing surplus waters of the aqueduct for the irrigation of lands in San Fernando Valley, and, as pointed out elsewhere in this report, several San Fernando communities are in process of organization into irrigation districts under the law enacted by the last legislature at the instance of the Los Angeles authorities. Outside of these lines of irrigation development southern California irrigation advances during the past two years have been mainly through pumping, as detailed in the paragraph by Mr. Tait on irrigation development in southern California. A new irrigation district under the Bridgeford act has been formed

about La Mesa, known as the La Mesa, Lemon Grove and Spring Valley Irrigation District, and substantial improvements have been made in the small system of the San Ysidro Irrigation District at San Ysidro. Mr. Tait estimates the total increase in the irrigated area in southern California since 1912 as between 50,000 and 60,000 acres.

As detailed elsewhere in this report, there has been a very substantial increase in the number of irrigation pumping plants in California since January 1, 1911. The best data available indicate that the total number of such plants in the state now approaches 25,000, as against less than 10,000 when the irrigation census of 1910 was taken. This large increase is certainly significant of the growing importance underground waters are having in California irrigation.

It has come to be well recognized that the problems of western irrigation are no longer problems of construction, but rather of settlement and operation. In most of the western states the settlement of lands brought under ditch is looked upon as the largest institutional problem connected with agriculture, as it probably is in California also at this time. In the past season considerable thought has been devoted by this office to the question of the settlement of irrigation projects. Data have been gathered from settlers on several projects in Sacramento Valley, and in cooperation with the College of Agriculture of the University of California a study has been made of the operation of the land settlement policy of the Canadian Pacific Railway in western Canada. We are further cooperating with the University in connection with a committee on rural credits and land settlement appointed by the President of the University to draft measures to be submitted to the coming legislature. The present methods of haphazard settlement of irrigated lands have raised the price of land to settlers to a nearly prohibitive figure. This, together with other tendencies prevailing in agriculture development which are increasing costs to the farmers, has practically placed the successful development of a 40-acre irrigated farm out of reach of the settler having less than \$5,000 at his command. This is the testimony of investors as well as of settlers themselves. On most California projects settlers have been led to purchase land with only sufficient money to make initial payments and provide minor equipment and improvements. In many cases the result of this condition has been the abandonment of the land contracted for. In other words, the optimistic statements of land selling agencies have led men ill equipped, both financially and by training and temperament, to undertake to establish homes on irrigated farms. While some of those who have settled will succeed and some will fail, it seems quite certain that California will not receive her share of the right kind of settlers on irrigated farms unless present conditions are radically changed. The belief that this is the case has led many to conclude that the time is ripe for the state itself to establish a land settlement policy under which it shall do for the settlers some of the things that are being successfully done for settlers in Australia and Canada. In both Australia and Canada settlers are furnished lands at a very much lower price per acre than the price of irrigated lands in California. While the usual terms of payment in California are ten years, in Canada the Canadian Pacific Railway allows twenty years; and in Victoria, Australia, land is sold on an amortization plan under which annual payments of 6 per cent on the purchase price of the land take care of interest and extinguish the principal in 31½ years. In both Canada and Australia the settler is given even additional aid in the way of "ready made" improvements or loans for improvements, as well, in some cases, as loans for purchasing stock.

Along with the question of greater aid to settlers on California irrigation projects, the economical use of irrigation water is coming to overshadow other irrigation problems in the state. Our studies of irrigation resources have indicated, as conclusively as it is possible to do without detailed engineering examinations covering the entire state, that there is sufficient irrigation water in California for less than one half of the area which needs water or that would be greatly benefited by it. Even the irri-

gation of the 9,000,000 acres which it is estimated may ultimately be watered can be brought about only by the establishment of more economical standards of use than now prevail in many parts of the state. It is believed the work of the new State Water Commission will be of tremendous force in establishing a more economical irrigation practice, especially in northern and central California, and it is largely because of this belief that much of the effort of this office is now being devoted to studies of economical duty.

Outside of the final adoption of the Water Commission Act, along the lines of which this Office has been interested since the beginning of its work in this state fifteen years ago, the most striking changes in the water laws of the State of California during the past two years have been those affecting irrigation districts. The addition of three complete irrigation district laws to the irrigation district statutes of the state, which was accomplished by the legislature of 1913, has brought problems of irrigation district organization that are entirely new. While the Bridgeford act with its amendments is coming to be thoroughly understood and its main features interpreted by the Supreme Court, the new laws, which do not have the restrictions that have been gradually built around the Bridgeford act, have increased many fold the opportunities for mistakes and therefore the responsibility of public agencies to aid in guarding against the misuse of these laws. A tendency has already appeared to substitute some of the later district legislation for the Bridgeford act when forming new districts. Until more is known about the new laws it is believed that our influence can well be exerted in favor of utilizing the irrigation district law that is already established when new districts are formed, at least, outside of the particular zones for which the new legislation was specially designed.

## APPENDIX TO REPORT OF COOPERATIVE IRRIGATION INVESTIGATIONS.

### Investigation of Wells in Imperial Valley.

Introduction by C. E. TART, Irrigation Engineer, Office of Experiment Stations, U. S. Department of Agriculture.

An examination of the wells of Imperial Valley and the adjacent desert was made in the winter of 1913-14 by Wells A. Hutchins. The geology of this section is discussed in Water Supply Paper 225 of the U. S. Geological Survey, entitled "Ground Waters of the Indio Region, California, with a Sketch of the Colorado Desert," while the use of water and its results is discussed in Document 246, U. S. Senate, sixtieth Congress, first session, entitled, "Irrigation in Imperial Valley—Its Problems and Possibilities."

Since these reports were issued, numerous flowing wells have been secured on the east side of Imperial Valley. Simultaneous with this development there has been much inquiry relative to the source and extent of the underground water and the possibility of securing stronger flowing wells by drilling to greater depths. The discovery of artesian water also revived interest in the possibility of irrigating land on the west side of Imperial Valley and in San Felipe Valley from wells. Neither the desert lands to the west nor the mesa to the east are within the territory to which the California Development Company expects to deliver water from Colorado River, nor are they in the newly organized Imperial Irrigation District which proposes to acquire the irrigation system of the Development Company. The east mesa may be irrigated by gravity from Laguna Dam.

Very little was known of the underground waters of the southeastern portion of Colorado desert prior to the construction of Imperial Canal in 1900. Coachella Valley, on the other side of Salton Sink, at the northwest end of the desert, then had a large number of flowing wells, but these were fed by drainage from the mountains to the northwest. The first bore in Imperial Valley, made at Imperial in 1905 to a depth of nearly 800 feet, was dry at the bottom. The next attempt was by the

city of Holtville, which in 1909 secured a flow of 48 gallons per minute on the town-site from strata at 836 and 1104 feet in depth. From this beginning the number of flowing wells on the east side increased rapidly until by the end of the past winter 33 had been drilled between Alamo River and the east-side mesa, all of which flow. One, the Rose School well, west of the Alamo River, flowed for one year after its completion. The area in which artesian water can be secured at reasonable depth has been fairly well determined. Other bores of much significance were at El Centro and Brawley in 1910. The El Centro well was 1,015 and the Brawley well 2,032 feet deep. Neither reached water.

The east-side wells are not productive enough for irrigation, but are useful for domestic purposes and for live stock. The water from many of the wells is too salty to be used for irrigation, although the town of Holtville mixes the water with ditch water without disastrous results to plants. The water is not pleasing to taste and it is too warm when first discharged to be refreshing, but it is healthful and of great value to the section of country where it is available.

The old beach line is the eastern limit of the artesian area. Only one flowing well, that of the Alamo School, is situated above sea level. The elevations range from 9 feet above sea level at the Alamo School to 137 feet below sea level at the Alamario well. These two wells mark the extreme southeastern and north-western limits of the artesian area. The Storey, one of the most eastern wells, is 5 feet below sea level, while the Rose School well, the farthest to the west, is 90 feet below sea level.

Eliminating the Boyd well, which is of small diameter, the water pressure at the surface of the ground ranges from 1.65 pounds per square inch at Thompson's well near Holtville, to 31.67 pounds per square inch at the Ferguson well. The pressure does not depend on the elevation, as most of the wells toward the north which are the farthest below sea level indicate light pressure.

The discharge, not considering the Boyd well, varies from .19 gallon per minute at the Phegley to 83.7 gallons per minute at the Hazzard and Strang well. Among the other better flowing wells are the Ferguson, Rohrer, Holtville City, Hooker and Bell, and T. Prim wells. The location of these is in a belt stretching 4 miles north from Holtville. An exception to the rule is the strong flow of the Alamario well at the extreme northwest.

In general the wells with the strongest pressure give the highest discharge, but there is no direct relation between the two. Pressure depends on the head to which the water is subject and it corresponds to the elevation at which the water would stand when quiet. The flow depends on this and, in an inverse manner, on the resistance offered the water at its entrance to the well casing and in its approach to the well through the sands and gravels from which it is derived. The comparatively high flow of the Hazzard and Strang well is no doubt due to the screen in the well casing at the water-bearing strata, which gives a large area of opening into the well and prevents the entrance of sands into the casing. The lighter flowing wells are fairly well distributed over the area.

The temperature of the discharging water ranges from 72 to 117 degrees Fahrenheit, the lowest being at the Cox well and the highest at the J. Prim well. In general, the temperature decreases toward the northwest.

It is probable that the main source of the water is Colorado River. This is indicated by a consideration of the pressure and elevations of the wells, the location of the artesian area, and the temperature of the water. The wells are about 100 feet below the level of Colorado River, directly to the east. The watershed and the precipitation on the mountains, sandhills, and mesa to the northeast are hardly sufficient to produce the results secured. The water from the wells in Coachella Valley, having its source in the larger and more valuable drainage areas of the San Bernardino and San Jacinto mountains, generally has a temperature of about 80 degrees, although it increases slightly toward the south. Again, the quality of the

water is much different from that of Coachella Valley wells. It is probable that the ground waters are divided at Salton Sea or that the seepage toward Salton Sea from both directions finds an outlet into this sink or lake, where it evaporates into the atmosphere or augments the waters of the lake.

The lack of success in drilling in the central portion of the valley and in Imperial, El Centro, and Brawley, is discouraging, yet it is possible that flowing water might be secured by boring to still greater depths. The wells along the railroad in Mexico may be fed from seepage from Colorado and Alamo rivers and the various sloughs which cross this section of the desert.

There is yet much speculation relative to the possibility of securing either flowing wells or wells that may be pumped for irrigation on the west side of Imperial Valley. The wells located on the plain south of Superstition Mountain reach water of rather poor quality. It is possible that good water might be secured in a limited amount at certain localities near the foothills on the west side. The mountains and hills to the west, although barren, should produce some drainage which is taken up by the gravels at their base.

San Felipe Valley, at the junction of Carrizo Creek, contains a large area of fine land, the soil being similar to that of Imperial Valley. This section is below sea level. The watershed contributing to this part of the desert is not of sufficient value to furnish water for irrigation of more than a comparatively small portion of the good land. Harper's well produces a small flow of water of fair quality from a 300-foot stratum. Some of the other wells in this section have reached water unfit for irrigation or domestic use at less depth. An examination of the record of the borings indicates that wells should not be undertaken unless preparations have been made to drill to a considerable depth. The upper strata are no doubt fed in part from rains on the desert, the water carrying the salts down in solution. The lower strata should be fed from the more distant debris cones at the mouths of the small mountain streams. The boring of deep wells in such an inaccessible locality is expensive. The only safe method would be for the development to proceed gradually by small units. In this way the limit of the water supply need not be exceeded.

The underground waters at great depth in Imperial Valley apparently have no connection with the so-called surface or subsoil waters found, in some localities, in strata from 20 to 50 feet beneath the surface.

## REPORT ON INVESTIGATION OF WELLS IN IMPERIAL VALLEY, 1914.

By WELLS A. HUTCHINS.

During the winter of 1913-1914 an investigation was made of all the wells in Imperial Valley, with a view to ascertaining the limits of the artesian area and the possibilities of further development of underground waters. Data were collected relative to the actual depths of the wells, the distance to water if not flowing, character of the strata of soil penetrated, etc., and tests of the pressure, discharge, and temperature of the artesian wells were made wherever feasible.

The discharge of the wells was measured in most cases by noting with stop watch the time required to fill a five-gallon oil can. This method was found convenient and sufficiently accurate for practical purposes with wells of such small flow. The water pressure was ascertained by a standard test gauge, and the temperature of the water was taken by a carefully calibrated thermometer. The depths, location of artesian strata, and logs of the wells were ascertained from the drillers or their assistants in all cases except where otherwise noted. The elevations were secured from records of the California Development Company.

For convenience in studying the subject, Imperial Valley has been divided into seven districts and the data on all of the wells in each district grouped under one heading. (See map attached.)

## Area No. 1.

This area comprises the territory lying between the ancient beach line on the east side of the valley and an arbitrary line running approximately halfway between Alamo River and the Southern Pacific Railroad from the international boundary line north. This area contains, with one exception, all of the flowing wells in the valley at the present time. The single exception is Harper's well, northwest of Superstition Mountain. The western line of this area seems to mark the western limit of artesian water that can be obtained at a reasonable depth, for wells have been drilled at several towns along the railroad much deeper than any in this area without developing flowing water.

As the fall of the surface is from the east and south, and as the western portions of the valley may be considered as nonartesian, it would seem to follow that the flowing water found in Area No. 1 originates east of the old beach line. There are no mountains to the east or northeast, however, from which the run-off is sufficient to feed the strata underlying this area; hence the conclusion seems warranted that they are fed by the waters of Colorado River.

Following are data on the individual wells of the area and a tabular summary of their salient features:

*City of Holtville.*—Located in section 36, T. 15 S., R. 15 E., completed in 1909, by Coachella Valley Development Company. The discharge and temperature were measured March 5, 1914, but it was not feasible to measure the pressure.

## Log:

Material	Depth to which extends, feet
Soil .....	50
Clay .....	113
Fine sand .....	132
Clay .....	176
Coarse sand, carrying water .....	180
Fine sand .....	205
Clay .....	255
Fine sand .....	267
Clay .....	280
Fine sand .....	296
Clay .....	490
Fine sand .....	508
Clay .....	836
Gravel, where casing landed .....	848
Clay .....	1,100
Gravel, not tested, but appeared good .....	1,120
Clay .....	1,340
Sand cement, quite hard .....	1,350
Clay .....	1,410

## Water analysis, furnished by city of Holtville.

	Grains per gallon
Magnesium carbonate .....	42.98
Magnesium sulphate .....	.31
Calcium chloride .....	.00
Magnesium chloride .....	.00
Calcium hydroxide .....	.00
Silica and oxides of iron and al. ....	2.51
Alkali carbonates .....	.70
Alkali sulphates .....	.35
Alkali nitrates .....	.00
Alkali chlorides .....	20.52
Organic matter .....	2.75

This water was found to be too salty for irrigation at Holtville unless mixed with ditch water.

This is one of three wells which are connected and of which the combined flow passes into a reservoir where it is mixed with ditch water. It is then pumped into a tank and distributed to the city for domestic purposes. On March 2, 1914, the combined discharge of the three wells was 57.7 gallons per minute. The temperature of the combined waters was 109° and of the air 73°.

*City of Holtville.*—Located in section 36, T. 15 S., R. 15 E. Drilled by Coachella Valley Development Company. The pressure, discharge, and temperature were measured March 5, 1914.

*City of Holtville.*—Located in section 36, T. 15 S., R. 15 E. Drilled by J. D. McNeil. A Layne and Bowler starter and no screen was used. The flow and temperature were measured March 5, 1914, but it was not feasible to measure the pressure.

*City of Holtville.*—Located in section 36, T. 15 S., R. 15 E. Drilled in 1911 by J. D. McNeil. Has 6-inch screwed casing. No flowing water was obtained, for the tools were stuck at a depth of 775 feet. A slight amount of water-bearing sand was found at a depth of 42 feet, with another stratum between 375 and 396 feet in depth. The elevation of the surface is -15 feet. This was located close to the natatorium well.

*Holtville Natatorium.*—Located in section 36, T. 15 S., R. 15 E. Drilled by Coachella Valley Development Company. Has 4-inch (outside diameter) screwed casing, but it reduced to 2 inches (inside diameter) and carried horizontally to a swimming tank. There one pipe descends to the floor and discharges into the tank, and another rises 4.5 feet to a shower bath. The flow from the upper pipe January 30, 1914, was 10.9 gallons per minute. The flow from the lower pipe would be greater. The temperature of the water January 24 was 103°. The water is used for the swimming tank and is also sold in receptacles to the town people for domestic use.

*Ed Boyd.*—Location, section 26, T. 15 S., R. 15 E. (within city limits). Has 2-inch (inside diameter) screwed casing, but is reduced at surface to  $\frac{3}{4}$ -inch (inside diameter) pipe, on which the tests were made. The pressure, flow and temperature were measured January 30, 1914.

*Hazard and Strang.*—Located in lot 89, in section 25, T. 15 S., R. 15 E. Drilled in 1910. Depth of well 873 feet. It penetrates two water-bearing strata, one between 400 and 500 feet and another between 600 and 700 feet. Found sand from 851 to 863 feet. The well carries Layne and Bowler screen of 7.64 inches mesh in both water-bearing strata. The flow in January, 1911, measured with a weir, was 9.3 miner's inches, or 83.7 gallons per minute. The pressure and temperature were measured March 2, 1914. The water is put to domestic and stock uses only, being piped to a large number of houses in the vicinity.

*W. B. Hill.*—Location of well in lot 38, section 32, T. 15 S., R. 16 E. Drilled in 1912 by J. D. McNeil. No screen was used. The starter contains slots 6 inches long, ranged 6 around the casing, one girdle to each foot. The pressure and other tests were made March 2, 1914. The water is put to domestic and stock uses.

*F. S. Best.*—Location of well, lot 38, section 32, T. 15 S., R. 16 E. Drilled in 1913 by J. D. McNeil. No screen was used. The starter contains 6-inch slots, ranged in rows of 6 around the casing, one row to each foot. The pressure, temperature and flow were determined March 2, 1914. The water is used for domestic and stock purposes. The Best and Hill wells are about one half mile apart and were drilled to about the same depth. The water of the two is stated, however, to taste quite different.

*W. A. Thompson.*—Location, lot 147, section 31, T. 15 S., R. 16 E. Drilled in 1913 by J. D. McNeil. No screen was used. The starter contains 6-inch slots, ranged six in a row about the casing and one row to each lineal foot. The pressure, flow and temperature were determined March 2, 1914. The water is used for domestic and stock purposes.

*Alamo School.*—Located in lot 78, section 15, T. 16 S., R. 16 E. Drilled in 1912 by J. D. McNeil. The starter used consisted of 6-inch slots placed six around the pipe and one girdle to each foot in length. No screen was used. A water stratum encountered at 200 feet in depth was pump water only. The casing is 4-inch (outside diameter) screwed, but is reduced at the surface to 1.5-inch (inside diameter) pipe, on which the tests were made March 4, 1914. The water is very good to the taste, and is used for domestic and stock purposes.

*Central School.*—Located in lot 60, section 20, T. 15 S., R. 16 E. Drilled in 1911 by J. D. McNeil. Depth of well 827 feet 4 inches, which is the bottom of a stratum of water-bearing sand 29 feet thick. The soil passed through consisted of layers of silt, clay and sand, with some adobe. The water stratum consisted of fine sand. A starter was used about 14 feet long, with slots 6 inches long placed six rows around, one girdle to each lineal foot. Thus the number of slots is 84. When the well was visited March 4, 1914, the water was leaking at a joint about 3 feet from the ground and was not overflowing the top; hence no tests could be made.

*C. D. Manning.*—Located in lot 92, section 22, T. 15 S., R. 15 E. Drilled in 1913 by J. D. McNeil. Has 2-inch (inside diameter) screwed casing. The well was drilled to a depth of 994 feet, but no flowing water was found. Water strata were encountered between depths of 124 and 145 feet, 463 and 483 feet, 506 and 522 feet, and 539 and 551 feet.

*Rose School.*—Located in lot 170, section 18, T. 15 S., R. 15 E. Drilled in 1912 by J. D. McNeil. There were two wells, the logs of which are similar. One was a 4-inch well and was a failure because a gas explosion jammed the casing. Then a 2-inch well was put down to the same depth. On March 7, 1914, the water was standing 48 inches above the surface in a pipe 54 inches high; hence the pressure at the surface was 1.73 pounds per square inch. The well flowed over the pipe for one year after being bored. The temperature of the water is reported to have been about 100° when flowing and the discharge about 1 gallon per minute.

*Ed Gorman.*—Located in lot 65, section 17, T. 15 S., R. 16 E. Drilled in 1912 by J. D. McNeil. A stratum encountered at 636 feet was pump water and was cased up. The starter contained 6-inch slots six around the casing and one girdle to each lineal foot. This water is used for domestic purposes and is piped to about 20 stock troughs. It was not feasible to measure the pressure or flow. These were stated to be similar to the Hooker and Bell well, described elsewhere in this report.

*Theo. Prim.*—Located in lot 100, section 24, T. 15 S., R. 15 E. Drilled in 1913 by J. D. McNeil. No screen was used. The starter has 6-inch slots ranged six in a row about the casing, the rows being one to each foot. The pressure and other tests were made January 26, 1914. The water is used for domestic and stock purposes.

*A. L. Hickey.*—Location, lot 148, section 19, T. 15 S., R. 16 E. Drilled in 1912 by J. D. McNeil. No screen was used. The starter used contains 6-inch slots arranged six in a row around the casing, one row to each foot of casing. After the well was drilled the flow became obstructed and the owner pulled out two sections of casing, thereby reducing the depth by about 41 feet. The pressure and temperature were determined January 27th and the flow January 30, 1914. The water is put to domestic and stock uses.

*C. C. Skilling and E. R. Gorman (Carter well).*—Location, lot 55, section 19, T. 15 S., R. 16 E. Drilled by A. L. Holt. No screen was used. The starter contains  $\frac{3}{8}$ -inch drilled holes 1 foot apart, there being from 54 to 60 to the joint.

Water-bearing sand	-----	883
Clay	-----	950

On January 27, 1914, the pressure and other tests were made. The water is used for domestic and stock purposes.

*F. M. Ferguson.*—Location, lot 128, section 12, T. 15 S., R. 15 E. Drilled in 1912 by J. D. McNeil. No screen was used. The starter contains 6-inch slots ranged six in a row around the casing, one row to each foot. The well is 900 feet deep, there being a 38-foot stratum of water-bearing sand at the bottom. The remainder is sand, silt and clay. At a depth of 200 feet there was found a stratum of water 30 feet thick which resulted in a big flow, stated to be 75 gallons per minute, but the water was brackish and the stratum discarded. On January 28, 1914, the pressure and other tests were made. The water is used for domestic and stock purposes.

*Eastside School.*—Location, lot 128, section 11, T. 15 S., R. 15 E. The depth, as reported by Mr. Ferguson, of Holtville, is 281 feet. The pressure, flow and temperature were determined January 28, 1914. It was necessary to measure the flow at the outlet of a 1.5-inch (inside diameter) pipe 220 feet from the well and 5 feet from the surface. The water is used primarily for domestic purposes, and to irrigate a few trees in the school yard.

*Hooker and Bell.*—Location, lot 72, section 7, T. 15 S., R. 16 E. Drilled in 1912-1913 by J. D. McNeil. No screen was used, but the starter contains 6-inch slots ranged six around in a row, one row to each lineal foot. On January 27, 1914, the pressure, flow and temperature tests were made. The water is used for domestic and stock purposes.

*J. W. Bridenstine.*—Location, lot 77, section 8, T. 15 S., R. 16 E. Drilled in 1912 by J. D. McNeil. No screen was used. The starter has 6-inch slots ranged six in a row around the casing, with one row to each foot. On January 27, 1914, the pressure, discharge and temperature were determined. The water is used for domestic and stock purposes.

*John L. McMinn.*—Location, lot 79, section 6, T. 15 S., R. 16 E. Drilled in 1912 by J. D. McNeil. No screen was used. The starter contains 6-inch slots, ranged six in a row around the casing, one row to each foot. No water was found below 492 feet. The pressure and other tests were made January 29, 1914. The water is used for domestic and stock purposes.

*W. A. Thompson.*—Location, lot 77, section 7, T. 15 S., R. 16 E. Drilled in 1912 by J. D. McNeil. No screen was used. The starter has 6-inch slots ranged six in a row about the casing, with one row to each foot thereof. The various tests were made January 30, 1914. The water is used for domestic and stock purposes.

*Fuller Bros.*—Located in lot 127, section 2, T. 15 S., R. 15 E. Drilled in 1913 by J. D. McNeil. No screen was used. The starter contains 6-inch slots ranged six in a

row around the casing, with one row to each foot. On January 28, 1914, the pressure, flow and temperature were determined. The water is used for domestic and stock purposes.

*B. Rohrer (Stroven well).*—Located in lot 143, section 1, T. 15 S., R. 15 E. Drilled by Coachella Valley Development Company. On January 29, 1914, the flow and temperature were determined and on January 30th the pressure. The water is used for domestic and stock purposes.

*J. H. Cox.*—Location, lot 154, section 3, T. 15 S., R. 15 E. Drilled in 1912 by Coachella Valley Development Company. It has 4-inch (outside diameter) screwed casing, reduced beneath the surface to  $\frac{3}{4}$ -inch (inside diameter) pipe on which the tests were made January 28, 1914. The depth of the well, as reported by the owner, is 300 feet, there being a stratum of water-bearing very fine sand 20 feet in thickness at the bottom. There were 2 or 3 other water-bearing strata. A Layne and Bowler starter was used, without a screen. The water is used for domestic and stock purposes.

*O. N. Shaw.*—Location, lot 74, section 27, T. 14 S., R. 15 E. Drilled in 1914 by J. D. McNeil. No screen was used. The starter contains 6-inch slots ranged six in a row about the casing and one row to each foot. The flow was obtained at 200 feet in depth, the water coming through small veins of sand. The pressure, discharge and temperature were determined March 3, 1914. The water is used for domestic and stock purposes primarily. When visited, however, the flow was draining into a corn field which it was slowly irrigating.

*Lucy Painter.*—Location, lot 88, section 27, T. 14 S., R. 15 E. Drilled in 1913 by J. D. McNeil. No screen was used. The starter contains 6-inch slots placed six in a row about the casing, with one row to each foot in depth. A stratum of water 18 inches thick was encountered at 170 feet, this being the flow utilized. The various tests were made on 1.5-inch (inside diameter) pipe March 3, 1914. The water is used for domestic and stock purposes.

*D. R. Raymond.*—Location, lot 96, section 23, T. 14 S., R. 15 E. Drilled in 1913 by J. D. McNeil. No screen was used. The starter has 6-inch slots ranged six in a row around the casing, the rows being one to each foot. The several tests were made March 3, 1914. The water is used for domestic and stock purposes.

*L. B. Rogers.*—Location, lot 87, section 27, T. 14 S., R. 15 E. Drilled in 1913 by J. D. McNeil. No screen was used. The starter has 6-inch slots, ranged six in a row around the casing and one row to each foot. The pressure, flow and temperature were determined March 3, 1914. The water is used for domestic and stock purposes, and also to irrigate a few trees.

*A. L. Storey.*—Location, section 15, T. 15 S., R. 16 E. This is under the High-line Ditch. Drilled October, 1913, to March, 1914, by A. L. Holt. No screen was used, but the starter contains  $\frac{3}{8}$ -inch drilled holes 1 foot apart, there being 54 to 60 holes to the joint.

Log:

Material	Depth to which extends, feet
Clay -----	200
Dry sand -----	240
Clay -----	515
Water-bearing sand -----	530
Clay -----	960
Dry sand -----	990
Then clay. Depth of well, 990 feet.	

The flow at 530 feet was utilized and overflowed a pipe 16 feet from the surface. The pipe was then taken off and the flow suddenly ceased, but by pumping the sand it was started again. When the well was visited March 4, 1914, the water was carrying considerable sand and the flow had attained about one fourth its former volume, with prospects that the water would clear and would attain its previous flow. It was impossible to make any tests. This water has no mineral taste and is excellent, being reported to be the best found on the east side. A rotary well rig was being used.

*J. M. Prim.*—Located under the Highline Ditch in lot 49, section 22, T. 14 S., R. 16 E. Completed in March, 1911, by J. D. McNeil. Depth of well was 964 feet. The soil passed through was all clay, except a stratum of water-bearing sand 14 feet in thickness at a depth of 950 feet. A Layne and Bowler starter without screen was used. The pressure, flow and temperature were determined March 3, 1914. The well is used for domestic and stock purposes. It overflows the top of the casing and has created a marsh.

*T. B. Shank.*—Location, lot 129, section 4, T. 14 S., R. 15 E. Drilled in July, 1909, by Coachella Valley Development Company. Slots were cut in 14 feet of the pipe and a double thickness of ordinary wire screen was wrapped around it to admit the water. The log, as reported by the owner, follows:

Material	Depth to which extends, feet
Soil	4
Dry sand	54
Soil (clay)	291
Water-bearing sand	305

On March 6, 1914, the pressure and other tests were made. The water is used for domestic purposes.

*Chas. Phlegley.*—Location, lot 42, section 34, T. 13 S., R. 15 E. Drilled in October, 1910, by Coe. Slots were made in the last casing and wrapped with very fine wire. No log is available, but the owner reports that formations of sand, slit and clay were passed through to a depth of 285 feet; then a 40-foot stratum of water-bearing sand was encountered and 30 feet of this was cased, making the depth of the well 315 feet. The tests of pressure, discharge and temperature were made March 6, 1914. The water is used for domestic purposes.

*Magnolia School.*—Location, lot 49, section 33, T. 13 S., R. 15 E. Drilled in August, 1910, by Coe. No log available, but the depth is reported by Chas. Phlegley as 347 feet, there being a stratum 7 feet thick of quicksand formation at the bottom. On March 6, 1914, the pressure, flow and temperature tests were made on a  $\frac{3}{4}$ -inch (inside diameter) pipe. The water is used for domestic purposes.

*Alamario.*—Owned by V. E. Stockwell, located in lot 156, section 31, T. 13 S., R. 15 E. Drilled in 1911 by Coachella Valley Development Company. Has 4-inch (outside diameter) screwed casing, but is reduced to 2-inch (inside diameter) pipe at the surface, on which the tests were made. The owner reports the depth as 535 feet. The first 200 feet is silt, then 50 feet of heavy joint clay, then heavy granite gravel bearing water for 10 feet. Another water-bearing stratum of sand 18 feet thick lies

at the bottom of the well. It is stated that the water when discharged has a slight taste of sulphur which lessens after a few minutes' evaporation. On February 5, 1914, the pressure, flow and temperature were determined. The water is used for domestic and stock purposes.

## Area No. 2.

This area lies between Area No. 1 on the east and the old beach line on the west and extends from Mexico north to Imperial Junction. It includes the central, western and northern portions of Imperial Valley. No flowing water has been found in this area at any depth, although one well at Brawley was drilled to a depth of more than 2,000 feet. It is noteworthy that only four miles east of this Brawley drill-hole an excellent flowing well was drilled at Alamario.

Many shallow wells have been dug near the mouth of Alamo River which give water at 12 to 15 feet in depth. The water probably seeps from New and Alamo rivers.

The logs and other data relative to wells drilled in this area follow:

*City of El Centro.*—No flowing water was obtained. The following, furnished by Helge Thenberg, is the log of this well for a portion of its depth, drilled in 1910 by the Coachella Valley Development Company:

## Log:

Material	Depth to which extends, feet	Material	Depth to which extends, feet
Soil .....	30	Sand .....	650
Sand .....	80	Clay .....	660

Sand, water-bearing .....	501	Sand .....	935
Clay .....	600	Sandstone .....	1,015
Sand .....	610	Gravel beyond .....	
Clay .....	645		

The elevation is -49 feet.

*Imperial Land Company.*—Located on Imperial township. Depth, nearly 800 feet. Bored January, 1905, by Enterprise Well Company of Coachella. Used hydraulic rig of light weight and made hole with 6-inch auger on 2-inch pipe. No water struck whatever.

Log: From 1 to 400 feet, alternate strata of adobe or clay and sandy loam. From 400 to 800 feet, the same except about every 50 feet was found a stratum of hardpan from 6 to 12 inches in thickness which was nearly as hard to drill through as soft rock. The elevation is -67 feet.

*City of Brawley.*—Drilled in 1910 with hydraulic rig by Coachella Valley Development Company. Cased in only 2 strata that would otherwise cave, one at 1,100 feet and the other near the bottom. The upper casing is 8 and the lower 6 inches in diameter. Penetrated sandstone from 590 to 920 feet, but encountered no gravel. The well is 2,032 feet deep and dry. The elevation is -116 feet.

*Divicland.*—Location, southwest quarter of section 7, T. 16 S., R. 12 E. Depth of well, as reported by Mr. Hudson, 787 feet. A small quantity of brackish water was struck at 400 feet, in several strata 3 to 5 inches thick. Water-bearing gravel was struck at 787 feet, and there the tools were stuck. Sand, silt and clay were penetrated. No flowing water was obtained.

## Area No. 3.

This area encircles Superstition Mountain and includes the plain between the mountain and Carrizo Canyon. No artesian water has been obtained in the area. Several wells have been drilled to considerable depths and the water comes to about 20 feet from the surface in some. A project is on foot to irrigate a considerable area by pumping from the wells.

Data on the individual wells follow:

*Earl Garrettson.*—Location, south half of section 2, T. 15 S., R. 10 E. Drilled in 1913 by J. D. McNeil. Passed through sandy, gravelly soil to a depth of 20 feet 4 inches; then water-bearing sand to 40 feet 8 inches; then gravelly hardpan to 82 feet 11 inches. No flowing water was obtained.

*Hudson.*—Location, southeast corner of section 25, T. 14 S., R. 10 E. Drilled in 1913 by Borden and Brown, using a cable rig. Depth of well, as reported by owner, 450 feet. Size of casing, 10 inches. Small strata of water-bearing sand were penetrated at various depths. The water rises to 20 feet from the surface. The well is pumped with an air compressor operated by a 40 horse-power engine, which is too small for the compressor. The water is a little salty, but will be used for the irrigation of several hundred acres if possible.

*Hudson.*—Location, near northeast corner of section 25, T. 14 S., R. 10 E. Drilled in 1913 with cable rig by Borden and Brown. The well has 10-inch casing and is stated by the owner to be 150 feet deep. The casing buckled and the well was abandoned, although the water rose to within 20 feet of the surface. Small strata of water-bearing sand were penetrated, yielding water a little salty.

*Hudson.*—Location, near northeast corner of section 25, T. 14 S., R. 10 E.; being 200 feet south of the other well in this corner. This was drilled in 1913 by Borden and Brown. The casing was taken up because of damage to the casing in the 150-foot well. The depth, as reported by Mr. Hudson, is 250 feet. The water rises to 20 feet from the surface. Several small strata of water-bearing sand were encountered, the water being a little salty.

#### Area No. 4.

This area comprises San Felipe Valley below sea level. It is here that the Harper well, also known as the Mesquite Drill-Hole, is located. This is the only flowing well on the west side of the valley and in the entire valley outside of Area No. 1. Other deep wells have been drilled in this vicinity and the belief prevails that artesian water is present in considerable quantity.

There is an abundance of surface or subsoil water in lower Carrizo Creek Valley, but the water in the majority of the wells is reported to be salty and undesirable for either domestic use or for irrigation.

In general, the subsoil or surface water in that section of the desert near the junction of San Felipe and Carrizo creeks is salty and unfit for irrigation. It is reported that 25 or 30 wells are dug in this region where water is obtained at from 25 to 36 feet. Two open wells were dug on the projected San Felipe townsite (section 8, T. 13 S., R. 10 E.) which reached good water at 35 to 40 feet. Other wells dug near San Felipe reach good water at from 24 to 42 feet in depth. Wells near the lower end of Carrizo Creek reach water at 34 to 48 feet. Rush and Owens excavated to a depth of 60 feet near sea level at the east side of Carrizo Creek Valley, striking gravel, but no water.

Data on wells drilled in this area follow:

*Harper's or Mesquite Well.*—Location, junction of Carrizo and San Felipe creeks, near the southwest corner of the northwest quarter of section 35, T. 12 S., R. 10 E., S. B. M. This was drilled about 1899 by John H. Harper for oil. No oil was found, but a flow of good artesian water was developed. It was formerly possible to locate the site by means of a derrick.

The log, furnished by Ed. Rausin, follows:

Material	Depth to which extends, feet
Silt .....	150
Sandstone .....	275
Gravel .....	320

The well has 6-inch (outside diameter) casing. On February 4, 1914, the temperature of the water was 80°F., and the flow 4 gallons per minute. The flow was originally much stronger and has been reduced by the partial filling up of the well or by the depletion of the underground water. Another 6-inch casing close to the flowing well is now choked up.

The elevation of the surface is -100 feet.

*Grace Ambrook*.—Location, near southwest corner of southwest quarter of section 35, T. 12 S., R. 9 E. Depth of well, as reported by Ed Rausin, over 500 feet. This was a perfectly dry hole, entirely in clay and soil.

*J. P. Loftus*.—Location, 640 feet north of the southwest corner of the southeast quarter of section 6, T. 13 S., R. 10 E., S. B. M. Drilled in 1913 by H. J. Sternberg.

Log:

Material	Depth to which extends, feet	Material	Depth to which extends, feet
Soil .....	34	Coarse water sand .....	175
Water sand .....	40	Hard red clay .....	223
Clay .....	51	Quicksand .....	243
Water sand .....	61	Red clay .....	260
Soft clay .....	83	Very sticky slate-colored clay.....	305
Coarse water sand .....	89	Red clay .....	341
Clay .....	101	Hard red clay .....	361
Dead sand .....	107	Hard dark red clay .....	400
Water sand .....	113	Hard slate-colored clay.....	427
Gravel and floating clay, with not much water .....	117	Fine clay .....	431
Sand .....	135	Hard red clay.....	449
Fine gravel .....	149	Clay .....	529
Clay .....	159	Water, sand and gravel .....	612
Heaving water sand.....	169	Sand and clay .....	661

At the depth of 661 feet the tools were buried by a shooting up of the water, carrying sand. The casing was cut in the stratum from 529 to 612 feet. The surface or subsoil water stands at a depth of 30 feet and the well water at 24 feet. The lower water-bearing stratum contains an abundance of water, as indicated by the pressure, and the prospects seem good for securing flowing water. Another hole will probably be drilled.

*L. A. Lindsogge*.—Location, southeast corner of the southeast quarter of section 5, T. 13 S., R. 10 E. This well was drilled hydraulically in 1910-1911 by H. J. Sternberg to a depth of about 661 feet. The strata penetrated were about the same as in the Loftus well, except that gravel struck at 169 feet in the Loftus well was struck here at 210 feet. From 305 to 400 feet were found sand and gravel mixed with soil, with no water. The tools were stuck at 661 feet.

*L. H. Mitchell*.—Location, section 8, T. 13 S., R. 10 E. Drilled in 1910-1911 with rotary rig by H. J. Sternberg. This well went to a depth of 660 feet, where the tools were stuck by an upheaval of sand from water pressure, as in the Loftus and Lindsogge wells. A 4-inch bit was used on a 2-inch drill rod. In this well, soft sandstone occurs at about 400 feet instead of clay, as in the Loftus well.

*H. J. Sternberg*.—Location, near southeast corner of southwest quarter of section 10, T. 13 S., R. 10 E. Drilled in 1912 by owner, using rotary hydraulic rig. Has 6-inch casing. This well was 510 feet deep. Surface water was struck at 45 feet and stands at that depth; then clay to 80 feet. At 320 feet water was struck that stands in the well at the same depth as the surface water. Sand and clay were found to 400 feet, and from there to 510 feet boulders were encountered which prevented deeper boring. The stratum at 320 feet has been pumped for a year, but the pump is not large enough to test the capacity of the well. In an attempt to withdraw the casing it was pulled apart and salty surface water allowed to enter the well, resulting in a mixture of waters unfit for use.

*Cawston Ostrich Farm.*—Location, 5 miles from San Felipe. Drilled in 1909–1910. Ed Rausin reports that 100 feet of silt and then 400 feet of clay were passed through. No water was found.

#### Area No. 5.

This area includes the foothill country around Carrizo Canyon and Coyote Creek and the broken Yuha Desert. No flowing water has been obtained here. It was originally 14 feet and is now 26 feet to water in Coyote Wells. Other open wells along Coyote Creek reach water at 7 to 15 feet. Water rises to the surface in Carrizo Canyon and sinks into the sand within 2 miles of the springs. The water from Carrizo Springs is slightly salty, but some of it is used by Mr. P. B. Fuller for irrigation of alfalfa with fair results. Good water is found 1 foot from the bed of the wash at Yuha Springs.

The wells drilled in this area are as follows:

*Barrett Drill Hole.*—Location, section 11, T. 15 S., R. 9 E. This was drilled by Barrett, and bought by J. M. Holloway. It was drilled for oil, but none was found. Ed Rausin reports that at a depth of about 400 feet the tools were hung up. The soil penetrated was mostly clay. Some water was struck, but it was very bad. Water rose to 40 or 50 feet from the surface.

*Henry E. Walker.*—Location, at Coyote Wells. One well of 12-inch casing was dug 30 feet deep and another of 4-inch casing 65 feet deep. Water stands at 12 feet from the surface. The 2 wells are reported to deliver 15 miner's inches when pumped with a No. 2 centrifugal pump and 3 horsepower gasoline engine. A windmill with pump and reservoir is also used. The water from the 30-foot well is salty, while that from the 65-foot well is fairly good, indicating that better water is obtained from the lower level.

*Yuha Drill Hole.*—Location, section 32, T. 16 S., R. 11 E. Drilled in 1909–1910 for oil to a depth of 1,200 feet. Twelve-inch (outside diameter) casing was used to a depth of 300 feet, after which the size was gradually reduced. At a depth of 800 feet an explosion of gas collapsed 3 joints of pipe; this was drilled out and the well extended. Numerous caves occurred. Some oil was reached at 700 feet and oil sand was found at several points, in addition to plenty of water unfit for use.

Another well 14 feet from the first gave an explosion at the same depth. This well is 1,375 feet deep, having penetrated oil and asphalt at several depths. Water rose to 80 feet from the surface.

*Hanna Drill Hole.*—Located at the northwest base of Fish Creek Mountain. This was a dry hole or did not reach water of good quality.

#### Area No. 6.

This area comprises the valley lands in Mexico. Water has been found in several wells along the Inter-California Railway, but most of it is not good for domestic or boiler use.

Data on the individual wells, furnished by the Southern Pacific Company, follow:

*Sesbania.*—Location, 14.2 miles from Calexico; 120 feet right of Sta. "D," 2,881+43. Owned by Southern Pacific Company. No indications of water were found and the well was abandoned. The depth was 559.6 feet.

Log:

Material	Depth to which extends, feet	Material	Depth to which extends, feet
Light soil (silt) mixed with clay ----	19.7	Clay and sand -----	252.4
Sand and clay -----	39.3	Sand -----	272.2
Clay -----	57.8	Clay and sand -----	291.3
Sand and clay -----	100.0	Sand -----	329.5

The elevation of the ground surface is 1,188.9 in reference to Inter-California Railway levels.

#### Area No. 7.

This area comprises the mesa east of Imperial Valley proper between the ancient beach line and the sand hills. No artesian water has been obtained here, but several shallow wells have been drilled.

Data on these wells, furnished by Newt Gray, follow:

*Newt Gray or Eastside Mesa Well.*—Location,  $\frac{3}{4}$  mile north of the international boundary between monuments 209 and 210. The depth drilled was 106 feet; depth to water, 86 feet. Size of casing, 10 inches. In drilling this well 3 strata of clay were encountered from 4 to 8 feet thick. The water is of good quality. The well was drilled to furnish water to travelers on the Yuma trail.

*County Well.*—Location, section 24, T. 15 S., R. 16 E., 6 miles from the High-line ditch. The depth drilled is not known; depth to water, 54 feet. The water is good. The well was drilled for the use of travelers on the Yuma trail.

*Government Well.*—Location, section 2, T. 16 S., R. 16 E., 4 miles from the High-line ditch. The depth drilled was 37 feet; depth to water, 30 feet. The water is reported to be good.

PART III

State Roads and Highways.

---

---

## STATE ROADS AND HIGHWAYS.

---

There are two distinct systems of public highways being acquired by the State of California. One dates from 1895, when the legislature by act declared the road from Placerville to the state line near Lake Tahoe to be a state road; the other had its inception in 1910, when the people by vote authorized the issuance of bonds to the extent of \$18,000,000 with which to construct a system of highways throughout the State. The fund so provided, and the construction of the highways thereunder, is being administered by a section of the Department of Engineering delegated for that purpose and designated the California Highway Commission.

For convenience in distinguishing the two systems of highways above described the roads built or acquired under the highway bond act are designated state highways, while the other class is referred to in the records and correspondence of the Department of Engineering as state roads.

Leaving the state highways to be discussed later, a brief description of the state roads is here presented.

### STATE ROADS.

The system of state roads, beginning with the acquisition by the state of the Placerville-Lake Tahoe road, as stated above, has been gradually extended from time to time by the taking over to state control of county roads and the construction of new roads in the mountainous regions where the building and maintenance of roads in condition for free travel would be beyond the financial ability of the counties supporting them. The system now embraces eleven roads, each created by a special act of the legislature, and bearing the name usually designated in the act creating it. These eleven roads are situated in thirteen different counties and aggregate about 550 miles in length. The official names and the counties traversed by them are as follows:

Alpine State Highway—El Dorado, Alpine, Mono, Calaveras, and Amador.

Emigrant Gap State Road—Placer.

Kings River Canyon State Road—Fresno.

Lake Tahoe Wagon Road—El Dorado.

Lassen State Highway—Lassen.

Myers Station-McKinney State Road—El Dorado and Placer.

Mono Lake Basin State Road—Mono.

Sierra State Highway—Sierra.

Sonora-Mono State Road—Tuolumne, Alpine, and Mono.

Trinity-Humboldt State Highway—Trinity.

Redwood Park State Road—Santa Clara, San Mateo, and Santa Cruz.

It will be observed that some of the foregoing are called "State Roads," while others are termed "State Highways." There is no reason why all should not be designated by the same term. Most of the names are long and cumbersome, several being compound and far from euphonious, while some are misleading as a designation of locality. Several of these roads traverse localities wherein were enacted much of the romance and tragedy of California's early history, and might appropriately bear names commemorative of those events.

The Emigrant Gap road passes over the high Sierra where the old emigrant trail crossed, having its eastern terminus at Donner Lake. This beautiful little lake was made famous by the perishing of thirty-six immigrants and the near annihilation of the Donner party in the winter of 1846.

Lake Tahoe road, for the greater part, is along the old overland stage road connecting California with "back home" at St. Joseph, Missouri. This is a portion of the road, 1,050 miles long, over which the famous pony express was operated in 1860 and 1861, carrying mail in eight days, as against twenty-two days required for steamship by the way of Panama.

One branch of the Alpine road crosses the range by way of Carson Pass along the trail blazed by the intrepid pioneer, Kit Carson. The "blazes" made by Carson on the trees by the roadside to indicate the way are still visible, as are also the ruts worn in the granite by the wheels of the wagons following the trail. A fit name for this road would be "Kit Carson State Road," and so with others. Each road has some distinction particularly its own, and might well bear a name indicative of such characteristic. Under appropriate names, they would become monuments to commemorate the early history and history-makers of the State.

During the session of the legislature held two years ago the matter of changing the names of state roads to conform to the foregoing suggestion was taken up by the parlors of the Native Sons of the Golden West, a patriotic fraternal order composed of native-born Californians. A bill was introduced, giving names to certain of those roads as suggested above, but it failed to become a law.

#### LAKE TAHOE WAGON ROAD.

This road was originally a toll road. It was declared to be a state highway by act of the legislature, approved March 23, 1895 (Chapter 128, Statutes 1895), which defined it as "commencing at the junction of the Lake Tahoe wagon road with the wagon road leading from Placerville to Newtown, a short distance easterly from the village of Smithflat, El Dorado County and running thence to Lake Tahoe."

The road was administered by a special commissioner until placed in charge of the Department of Engineering in 1907.

Plate XXXVII. Emigrant Gap Road, Donner Pass, Showing Subway Under Railroad. Railroad Snow-sheds in Middle, State Road in Foreground.

The Lake Tahoe wagon road is 61.91 miles in length from Smith-flat to the Nevada state line at the south end of Lake Tahoe. Practically every rod of this road is through a region of great scenic beauty. It is one of the most popular mountain roads open to automobiles, and the increasing traffic over it entails constant vigilance and labor to keep it in good condition. About fifteen miles at the west end is in a material that quickly works into an impalpable dust under the rapidly moving wheels, and it is necessary to sprinkle it daily during the dry season. This required the service of several teams, but this summer a caterpillar traction engine has been used for hauling the sprinkling wagons, and in the one season used saved about \$600 over the cost of the same work formerly done with horses. A greater saving is anticipated as soon as better facilities can be installed for loading the wagons.

There has been discovered near the road a bed of gravel which appears to be well adapted for metalling road surfaces. About six miles is being covered with this surfacing which it is believed will be a great improvement.

#### MONO LAKE BASIN ROAD.

This road starts in Levining Creek canyon a few miles from Mono Lake and follows up the canyon to Tioga Lake, a distance of 9.3 miles, connecting the county road system of Mono County with a road locally known as the Tioga toll road.

This latter road was built under a franchise for a toll road but excepting for a short time immediately following its completion about 1882 or 1884, no tolls have been collected for its use nor has it been kept in condition to induce travel over it.

It is 63 miles in length from Tioga Mine near Tioga Lake to where it joins the Big Oak Flat and Yosemite Turnpike at Sequoia, a short distance from Yosemite Valley, but has been allowed to deteriorate badly. It was reported by the superintendent of the Yosemite National Park that only a little more than \$250 had been expended in upkeep by the owners in five years.

A bill was introduced in Congress some years ago to purchase the road for the Yosemite National Park, but nothing has so far come of it.

Without a connection across the mountains the Mono Lake Basin Road is of little value to the State and unless the Tioga Road can be secured and made a free highway it would better be abandoned. With the Tioga road a state road, traversing 52 miles of the Yosemite National Park it would afford a delightful transmountain route through a wonderful scenic region.

Nothing has been done with the state road during the past two years excepting to restore some rock walls crushed by the winter snowslides, repair culverts and general maintenance.

## SONORA—MONO STATE ROAD.

This road connects Bridgeport, Mono County, with the centers of population in the Great Valley, terminating as a state road at Long Barn, 20 miles east of Sonora, Tuolumne County.

This road, in common with all of the state roads in the high Sierras, is subject to the ravages of snowslides in winter and washouts by thunderstorms in summer. Cost of maintenance is greatly increased by the hundreds of thousands of sheep, cattle and horses driven to mountain pastures in the spring and returned to the lowlands in the autumn. After each band of stock passes over the road it is found full of rocks dislodged from the hill slopes above by the animals' hoofs.

A great deal of maintenance and renewal has been accomplished. The wooden bridge over the south fork of Stanislaus River at Strawberry gave way last year and has been replaced with a concrete arched bridge.

An old bridge over the main river was crushed by the snow last winter, and this summer a new and stronger timber bridge was erected in its stead.

No changes in alignment have been attempted, though when funds become available such changes may be made with great advantage, particularly at one stretch where several stream crossings can be avoided by changing the location of the road.

## TRINITY—HUMBOLDT STATE ROAD.

This road, beginning at Mad River Low Gap near the boundary between Trinity and Humboldt counties, and running thence across Mad River, over South Fork Mountain, across South Fork of Trinity River and up Rattlesnake and Post creeks, over Post Creek Mountain connects at Peanut with a county highway from Red Bluff to Hayfork. The length is  $31\frac{3}{4}$  miles.

Construction began in 1907 and was partly completed in 1912 so that traffic could get over it. Each year since improvements have been made upon it. In addition to the usual repairs and maintenance work, this year two wooden bridges over Post and Salt creeks, respectively, were replaced with concrete structures. During the last summer, also the piers for two bridges, on Mad and Trinity rivers were constructed by the department, and contracts let for the material and erection of the superstructure. Both bridges will be steel deck-truss on concrete piers. It is hoped to have them completed in time for summer travel next year.

## RED BLUFF EXTENSION.

The legislature in 1913 appropriated \$3,000 for the location and survey of a road from the eastern terminus of the Trinity-Humboldt

Road to Begum Creek near the line between Shasta and Tehama counties.

Three routes were examined, and selection made of a line from Peanut via Bridge Gulch to Wildwood, thence following generally the course of the present road to the summit of Goode's Mountain. From here it leaves the old road, follows the side of Goode's Mountain to the headwaters of Cottonwood Creek; thence down the middle fork of that stream, and across Begum Mountain to Begum Creek at Sylvester's.

The distance from Peanut to Sylvester's by the survey is 36 miles and the maximum grade six per cent.

The cost of construction for 12 feet width of roadway, 18 feet wide on the turns is estimated at \$65,000 plus \$25,000 for bridges and culverts, making the total estimated cost \$90,000.

It is recommended that provision be made for the construction of the proposed extension, contingent on Tehama County obligating itself to continue a road of like grade and character on to Red Bluff.

#### SIERRA STATE HIGHWAY.

This road, situated in Sierra County, was authorized by act of legislature, approved March 8, 1907, at which time the sum of twelve thousand dollars was appropriated to make surveys and construct a road from Downieville to Mount Pleasant, a distance of 20 miles. During the summer of 1907, a survey was made of  $14\frac{1}{2}$  miles of the line, leaving about  $5\frac{1}{2}$  miles unsurveyed. Where the right of way was not donated the county of Sierra procured it without cost to the State. In July, 1908, construction was commenced and 2.9 miles of the road was completed. The width of the roadway constructed is 12 feet; turn-outs, 18 feet; maximum grade,  $6\frac{1}{2}$  per cent.

The cost of building this 2.9 miles of road was \$8,018.97. The funds being nearly exhausted, and winter coming on, the tools and equipment used were stored at Downieville. The next summer some repairing was done but owing to lack of funds no construction was attempted, nor has there been any attempt at maintenance during the last two years.

This road, as stated above, would be about twenty miles in length, if completed; less than three miles of it has been constructed at a cost of \$12,000. In its uncompleted condition, it does not afford convenience to any considerable number of people, and if completed as originally planned, it will not connect any important centers of population or industrial activity; nor will it afford Downieville a good means of reaching the Sacramento Valley. In view of these conditions the wisdom of expending more money to complete the road or of maintaining as a state road the three miles now built is open to question.

In view of the above statement it is recommended that this road be abandoned as a state road.

## KINGS RIVER CANYON ROAD.

This is one of the most expensive roads in the State to construct. Beginning at General Grant National Park in the Kings River region amongst the giant redwoods (*sequoia gigantea*) it runs in a general easterly direction 32.8 miles to the floor of Kings River Canyon, a counterpart of the famous Yosemite Valley in all scenic features excepting the waterfalls.

Less than one-half of the road has been constructed at a cost of about \$75,000. When completed it will afford ingress to the wildest region of the celebrated rugged scenery of the Sierras.

During the last period only maintenance and slight improvements of the roadbed already constructed has been attempted.

## EMIGRANT GAP ROAD.

This road, located along the route followed by the ill-fated Donner party and other immigrants coming into California in the pioneer days, begins at Emigrant Gap, in Placer County, through Donner pass to the west end of Donner Lake. Most of the roadbed was constructed at the time the Central Pacific railroad was being built. Just as the road turned down the east slope of the mountains from the summit it crossed the railroad track through a snowshed at the end of a tunnel. The grade descending from the crossing exceeds 22 per cent. This has always been an extremely dangerous crossing, which was recognized by the officials of the railroad company as well as of this department and the traveling public.

The railroad company agreed to contribute part of the cost of eliminating the crossing, and in 1913 the legislature appropriated \$4,000, and with this fund and the railroad's contribution the state road was changed, a tunnel was pierced under the railroad track, and in this manner the dangerous grade crossing is avoided. The change was completed last summer much to the relief of all concerned.

The other improvements on the Emigrant Gap road effected consisted of the construction of two small concrete bridges and the substitution of iron culverts for sixty wooden structures.

## MEYERS-MCKINNEY ROAD (TAHOE).

This road around the west shore of Lake Tahoe connects the Lake Tahoe road from Placerville with the wagon road from McKinney's to Truckee, Donner Lake and the Emigrant Gap State Road.

It was authorized by an appropriation made in 1911, and construction was begun in 1912, but it was not until 1913 that it reached a condition permitting travel upon it. Improvements have been added during 1914.

Skirting the west side of the lake affording most entrancing views of that great gem of the mountains, it has become very popular with the mountain tourists.

## LASSEN STATE ROAD.

This road, lying mostly in a region of volcanic soil and boulders, is difficult to maintain. During the last season, the Department in co-operation with the county of Lassen macadamized about  $1\frac{1}{2}$  miles of roadbed across a particularly bad stretch.

## ALPINE STATE HIGHWAY.

Certain roads traversing the mountain regions in El Dorado, Amador, Alpine, Calaveras and Mono counties constructed by the several counties named, or by toll road companies and later acquired by the counties, were taken over and created a state highway by the act of the legislature, approved April 15, 1911 (Chapter 468, Statutes 1911). The aggregate length of the routes declared by the statute as constituting the Alpine State Highway is about 217 miles and may be divided into three natural geographical sections, as follows: Amador and Alpine counties, 75 miles; Calaveras and Alpine counties, 60 miles; El Dorado, Alpine, and Mono counties, 82 miles.

With the exception of about 24 miles of the Alpine-Mono section, all of the road has been traveled by team and much by automobiles, though there are many steep grades, and, owing to neglect, many miles had become in bad condition on account of slides, washouts and fallen timber. The 24 miles of the Alpine-Mono section mentioned above is mostly new territory not traversed by any kind of road. A survey was made of this portion in 1912 but no funds being available for construction nothing has been done to complete the gap, the cost of which was estimated at \$75,000.

The Alpine State Highway traverses mountainous regions, very sparsely inhabited, and the maintenance of it was a heavy burden upon the counties supporting it; heavier in fact than they were able to sustain and as a consequence much of the road had become very much out of repair and required a large expenditure to put it in condition again. Maintenance of these mountain roads is expensive and with the limited funds at command, improvements which could often be effected by change of location could not be accomplished as desired, although some work in that direction has been executed, notably between Lake Tahoe and Hope valleys and on the Carson Pass branch below (west of) Cooks Station. Here in a long stretch of the road where much teaming is done in the summer and heavy rains occur in winter, the combined effect of the wagon wheels and water has worn the roadway into a ditch from 4 to 12 feet deep, and the width at the bottom equal to the tread of the wagons.

It was deemed best here to shift the road to new ground where a roadway was graded, over a distance of about 15 miles, making a very marked improvement.

On the Ebbetts Pass (Calaveras branch) about three miles of road-bed was surfaced with handbroken rock and earth.

In Mono County a concrete culvert was built at the crossing of Little Antelope Creek.

#### REDWOOD PARK ROAD.

The legislature by an act approved June 13, 1913 (Chapter 398), appropriated the sum of \$70,000 for a road from Saratoga Gap in Santa Clara County, through the Coast Range Mountains, to the California Redwood Park.

A survey was made in the early part of last summer and construction began in September last. The total length as surveyed to Governor's Camp, in the Park, is 16 miles. The road runs through Governor's Camp, the resort and camp grounds of the Park, and terminates at Bloom's Mill. From this point the county of Santa Cruz is constructing a road upon a more direct route to Santa Cruz city than any other road now in existence.

Construction on this road is progressing rapidly under the direction of this Department with the prospect that it will be open to traffic before the end of this year.

#### STATE ROADS ADVISORY COMMITTEE.

The 1913 session of the Legislature adopted Assembly Joint Resolution No. 31 (Chapter 77, Concurrent and Joint Resolutions, 1913), creating an advisory committee consisting of two senators and two members of the assembly—

“To confer with the state engineer and the state board of control, regarding location, construction and maintenance of state roads other than state highways constructed under and by virtue of the ‘state highways act’ of California and to report back with recommendations to the forty-first session of the Legislature.”

The committee appointed consisted of Senators P. F. Cogswell and Benjamin Rush and Assemblymen W. F. Chandler and A. G. Kuck. This committee, with Mr. Clyde L. Seavey, of the Board of Control, and the State Engineer, made a trip during the autumn of 1913 over all of the roads enumerated in the foregoing description of state roads as well as over the routes of several proposed state roads.

The advisory committee will present a report and its recommendations to the coming session of the Legislature.

#### ROAD MAINTENANCE FUND.

By provision of the motor vehicle act, one half of the net receipts for motor vehicle licenses is assigned to the State for road purposes. Of the funds received by the State from the source stated, \$125,000 was allotted for maintenance and improvement of the state roads above enumerated.

Snow Scene, Lake Tahoe.

## TRAFFIC CENSUS ON MOUNTAIN ROADS.

But little observation has been made heretofore of the amount of travel on the state roads in the mountain regions. In 1913 and 1914 on some portions of a few of these roads a partial census was taken, the results of which will appear in a table presented herewith.

It has long been the custom with many people living in the great valley to take a trip into the mountains during the summer months. A family having a team will prepare a wagon in which the members may ride, and carrying tents, bedding, camp equipment, etc., start out for a camping tour through the scenic regions. Sometimes parties are organized, ranging in numbers from three or four to one hundred and fifty people. Frequently these parties extend their tours into the rugged fastnesses of the high mountains far beyond any point reached by wheeled vehicles and where their impedimenta must be transported upon the backs of pack mules, while the people ride on horseback or walk as best suits them.

Since the Department of Engineering has begun systematic improvement of the roads acquired by the State they are each year attracting more and more of these roving, nature-loving tourists.

Several of the roads, too, are thoroughfares over which great droves of stock are driven every spring from the lowlands to Alpine pastures where they are grazed during the short summer and returned over the roads again in the autumn. The passage of stock, in droves, entails a great amount of work upon the road crews to clear the roadway of rocks and gravel rolled down by the stock following along the hillsides above.

A great many campers push their way to some inviting spot by the roadside where they pitch camp and remain for several weeks, hunting, fishing, and enjoying the delights of outdoor life, returning over the same route to their homes. Sometimes parties will traverse a state road part way and then finding a branch road, follow it, so that enumerators record them only at one end of the road. Such travel is designated as "local traffic," to distinguish it from "through traffic" which travels the full length of the roads.

The table of partial census referred to above which, it will be observed, shows a very marked increase in travel for 1914 over that in 1913 on most of the roads, here follows:

TABLE No. 48.  
Traffic Census, State Roads.

Name of road	Year	Automobile number		Team number		Loose stock number	
		Through	Local	Through	Local	Through	Local
Emigrant Gap -----	1913	2,200	-----	100	-----	440,000	-----

## EIGHTEEN MILLION DOLLAR STATE HIGHWAYS.

When the people of the State voted to create a bond issue of eighteen millions of dollars to acquire a complete system of state highways, they expressed emphatic declaration that California should be in the vanguard of the march of twentieth century progress.

Although the vote in favor of the measure indicated a deep interest in the subject on the part of the people, it is doubtful if many of them fully realize its importance nor the influence upon industrial development of the State that will be exerted by a system of good roads such as is contemplated by the act.

Much as railroads, rivers and canals are a means for transportation of the commerce of the country, enormous as that commerce is over those highways, they are not so important to the mass of the people as are good roads. Every pound of produce and nearly all merchandise transported over the railroads and waterways must be hauled to the receiving stations, or from the points of debarkation to the depots of distribution, while probably as much more is transported over the roads in inter-community traffic without ever being transferred to the public carriers.

Plate XLII. Building State Highway Through the Forest.

It is held that as a general rule the suitable improvement of a highway within reasonable limitations will double the value of the land adjacent to it and increase that of more distant property within a large radius of influence. Accepting the statement as true, then the entire cost of the proposed system will have been returned to the State many times over in enhanced values long before its completion.

The near perfection of the motor vehicle as a means of transportation, enabling the traveler to go in an hour farther than he formerly went in a day, and making it possible to deliver produce to market in a fresh state from distances that absolutely were impossible to cover with the best animal locomotion, is a factor of great potency which can not be ignored in contemplating future developments.

There are today 120,000 automobiles registered in the State. If one third of them are trucks, there are still 80,000 passenger cars, ranging in size from two-passenger roadsters to the big autobusses carrying 75 passengers. Allowing an average of five passengers to each and a daily run of only ten miles, it aggregates 4,000,000 passenger miles traveled every day. Add to this 40,000 trucks carrying two tons each and running  $12\frac{1}{2}$  miles a day gives a million ton miles of freight carried each day by motorpower over the existing roads of the State, good, bad and execrable. These figures are purely speculative. The writer does not know that they represent more or less than the facts, but they are offered to the reader as a basis to figure for himself the importance of this factor in the demands for "good roads" and more of them.

Another factor which may well be considered in this connection is the attraction that good roads will have for the tourist. Some states are spending large sums in betterment of their highways with a view of inducing automobilists from other states to travel over them, and no state in the Union, nor any country in the world, can offer to the tourist such attractions as will be opened to his pleasures in the mountains and at the seashore as California, when she shall have acquired a complete system of good highways.

Europe found long ago that it pays to make its scenic regions accessible over well constructed roads, and Switzerland, particularly, has expended vast sums in constructing elegant roadways, sometimes carved out of the sheer face of crags overhanging the tumbling torrents below. In two years after automobiles were admitted to these scenic highways, the registrations at tourist hotels doubled in number.

It is no dream to believe that with the construction of good, smooth roads of easy grades in the mountains, through the valleys and along the seashore, the miners' and shepherds' cabins and the fishermen's "shacks" will be displaced in scores and hundreds of picturesque spots by attractive and comfortable modern hostelries. Then, it will be

realized that California made no mistake when she appropriated eighteen million dollars from the public treasury for the laying of the proposed network of highways throughout her communities.

#### STATE HIGHWAYS.

The State has undertaken to construct and maintain a system of state highways distinct from the state roads elsewhere referred to in this report and has appropriated the sum of \$18,000,000 for the purpose.

The state highway act, approved March 22, 1909, outlines in somewhat general terms the scope of the work, the locations of the routes, places the jurisdiction over the proposed state highways in the Department of Engineering, and provides for a bond issue of \$18,000,000 and for a state highway fund and a state highway sinking fund. This act was approved by the people at the general election held in November, 1910.

By an act of the legislature in 1911, the Advisory Board of the Department of Engineering was increased to seven members, and the administration of the \$18,000,000 highway fund was delegated to three appointed members of the board, designated as the State Highway Commission.

A large force of engineering parties and office employees has been engaged in making surveys, locations and plans for highways, and at the present writing more than six hundred miles of state highways have been constructed under standardized specifications and about four hundred miles additional are under contract or being advertised.

The types of roadway adopted vary according to the conditions encountered, and were selected after careful study of all matters affecting cost, durability and service.

Bridges and culverts of the most substantial character have been introduced, and the design has been made with due regard for ethical considerations.

A summary of the recent operations of the State Highway Commission is presented in the following report, compiled by Mr. George B. Harrison:

#### SUMMARY OF OPERATIONS OF CALIFORNIA STATE HIGHWAY COMMISSION.

By GEORGE B. HARRISON.

Construction of the state highways under the act providing the \$18,000,000 bond issue has proceeded under the general direction of the California Highway Commission, composed of the three appointed members of the Advisory Board of the Department of Engineering. The plan of the state highways act for principal routes through the Sacramento and San Joaquin valleys and along the coast has been advanced so definitely that the highway commissioners and the highway engineer have been able to give considerable time in 1914 to studies of the secondary routes which the law contemplates to connect the mountain and other county seats

XLIII. Concrete Retaining Wall, State Highway.

not on the through routes. The latter have been studied by personal inspections, and reconnoissances have been made and ordered in advance of consideration of the location surveys.

The main routes have assumed definite position in all parts of California, extending from Crescent City and Eureka on the northern coast to San Francisco and through San Luis Obispo and Santa Barbara to Los Angeles and San Diego, and in the interior from the Oregon line, via Yreka, Redding, Red Bluff and Marysville to Sacramento, thence through Fresno and Bakersfield to Los Angeles. The cities on the west side of the Sacramento Valley, those between the San Joaquin Valley and Santa Cruz, and the principal sections of southern California, also have roads laid out for improvement, with construction already provided for.

One hundred and thirty-six contracts had been initiated by the California Highway Commission up to November 30, 1914, and under them, sections of work have been completed, or were under way, in the following counties: Alameda, Butte, Colusa, Contra Costa, El Dorado, Fresno, Glenn, Humboldt, Imperial, Kern, Los Angeles, Madera, Marin, Mendocino, Merced, Monterey, Napa, Orange, Placer, Riverside, Sacramento, San Benito, San Bernardino, San Diego, San Luis Obispo, San Mateo, Santa Barbara, Santa Clara, Santa Cruz, Siskiyou, Solano, Sonoma, Stanislaus, Shasta, Tehama, Tuolumne, Ventura, Yolo and Yuba. Other work of a preliminary nature, such as surveys or reconnoissances, has been ordered by the Highway Commission for all the remaining counties and is to be prosecuted vigorously during 1915.

The following summary shows progress made on the state highways to November 30, 1914:

	Miles
Surveys made and plans in various stages of preparation-----	2,150
Layouts made (154) -----	1,164
Contracts advertised or awaiting award-----	47
Contracts let, including certain day labor work (136)-----	987
Work completed and accepted-----	320
Work completed but not yet accepted-----	300

Of the 987 miles of work under contract a division may be made by types of construction as follows:

Type	Miles
Graded only (to be surfaced under future contracts)-----	266.0
Macadam with thin bituminous carpet-----	7.6
Oil macadam -----	24.4
Cement concrete with thin bituminous top-----	650.1
Macadam with thick bituminous top-----	16.5
Cement concrete with thick bituminous top-----	19.1
Timber and concrete trestle -----	3.1
Total -----	986.8

The principal items of the completed work have cost the State approximately as follows on the first 211 miles of highway completed and accepted:

Excavation, regardless of classification-----	\$0 44 per cubic yard.
Concrete, in structures -----	12 60 per cubic yard.
Concrete, in pavement bases-----	5 93 per cubic yard.
Asphaltic concrete wearing surfaces, 1½ ins. thick	0 54 per square yard.
Thin bituminous tops, ¾ to ½ inch thick-----	0 09 per square yard.

State highway routes thus far established, and the counties through which they pass, are as follows:

Route 1, along the Pacific Coast north of San Francisco Bay, through Marin, Sonoma, Mendocino, Humboldt and Del Norte counties. Length, as surveyed and with surveys ordered, 381.2 miles; completed or under contract, 111.6 miles.

Route 2, along the coast south from San Francisco to San Diego through San Mateo, Santa Clara, San Benito, Monterey, San Luis Obispo, Santa Barbara, Ventura, Los Angeles, Orange and San Diego counties. Length, exclusive of county highway in Los Angeles County as surveyed, 464.6 miles; completed or under construction, 302.3 miles.

Route 3, through the Sacramento Valley, from Sacramento to the California-Oregon boundary line, through Sacramento, Placer, Yuba, Sutter, Butte, Tehama, Shasta and Siskiyou counties. Length, as surveyed, 277.6 miles; completed or under construction, 158.5 miles.

Route 4, through the San Joaquin Valley, from Sacramento to Los Angeles, through Sacramento, San Joaquin, Stanislaus, Merced, Madera, Fresno, Tulare, Kern and Los Angeles counties. Length, as surveyed, 270.8 miles; completed or under construction, 211.1 miles.

Route 5, from the San Joaquin Valley system to Santa Cruz via Oakland and San Jose. Length, as surveyed, 92.2 miles; completed or under construction, 55.7 miles.

Route 6, from Sacramento across the Yolo by-pass to a connection with route 7 near Davis. Length, as surveyed, 14.5 miles; under contract, 3.1 miles.

Route 7, from Tehama Junction to Benicia, connecting the county seats of Glenn, Colusa, Yolo and Solano counties. Length, as surveyed, 151.3 miles; under construction, 93.7 miles.

Route 8, from a connection with Route 1 near Ignacio to a connection with Route 7, either at Benicia or Cordelia, via Napa, through Marin, Sonoma and Napa counties. Length, as surveyed, 26.2 miles; under construction, 4.5 miles.

Route 9, connecting San Bernardino with the main highway system, through Los Angeles and San Bernardino counties. Length as surveyed, 31.8 miles; completed or under construction, 17.9 miles.

Route 10, connecting Hanford with the main route and running to Visalia. Length, as surveyed, 18.5 miles.

Route 11, connecting Placerville with the main route at Sacramento. Length, as surveyed, 29.1 miles; completed or under construction, 18.7 miles.

Route 12, connecting El Centro with the main system at San Diego and running through Imperial and San Diego counties. Length, as far as surveys are completed, 102.5 miles; under construction, 21.4 miles.

Route 13, connecting Sonora with the main system in the San Joaquin Valley through Stanislaus and Tuolumne counties. Length, as surveyed, 49.5 miles; under construction, 10.9 miles.

Route 14, in Contra Costa County. Length, as surveyed, 20.8 miles; under construction, 10.6 miles.

Route 15, connecting Colusa with Route 7 at Williams. Length, 8.5 miles.

Route 16, connecting Lakeport with Route 1 at Hopland. Reconnaissance made.

Route 17, connecting Auburn with the main road in the Sacramento Valley. Length, as surveyed, 15.6 miles.

Route 18, connecting Mariposa with the main system in the San Joaquin Valley at Merced. Surveys in progress. Approximate length, 33.9 miles.

Route 19, connecting Riverside with the main system at Los Angeles. Length, as surveyed, 16.9 miles; completed or under construction 16.3 miles.

Route 20, connecting Weaverville with the main system at Redding. Length, as surveyed, 47.9 miles.

Route 21, from Richvale to Oroville, in Butte. Length, as surveyed, 8.7 miles.

The state highway system comprehends approximately 3,000 miles of improved roads to comply with the law, and of these, 1,800 miles are included in the main routes. These latter are to be paved, while the lateral or feeder roads will be surfaced with gravels or other relatively inexpensive native materials. Construction is governed on the line of the following principal characteristics of the roads built: (1) A right of way not less than 60 feet in width, where it is reasonably obtainable, and as direct between objective points as is consistently possible; (2) gradients not exceeding 7 per cent, even in the mountainous parts of the State; (3) curves as open as possible and in no case of less than 50 feet in radius; (4) as many

culverts of sufficient capacity as are needed to take care of surface and underground water; (5) a traveled way, under ordinary conditions, not less than 21 feet in width, and in the mountains not less than 16 feet wide, with the center paved or surfaced so as to be hard and smooth under all climatic conditions at all times of the year, the width of surfacing to be in general 15 feet; (6) smoothly graded roadsides, reserved for future tree planting.

The policy as to paving was established at the outset in a decision to adopt a type of paving that would accord with the traffic needs of the locality served; instead of a rigid standard, local conditions were met by varying types, thereby saving waste of money through unnecessarily high first cost or great maintenance charges. Three types of pavement are possible under conditions in this State: (1) oil macadam pavement (penetration method); (2) concrete roadway with a relatively thin bituminous wearing surface; (3) concrete roadway with a thick bituminous top of asphaltic concrete.

California is fortunate in its production of paving materials, and this has aided materially in state highway construction. This is especially true of the wearing surfaces, for the vast supply of California oil with an asphaltic base has made possible the adoption successfully of the bituminous coverings for the pavements of the California state highways. The earliest work of this sort laid by the Commission was placed near Fresno, where it has been under constant and heavy traffic for two years with hardly any wear appreciable and with almost no need of attention for repairs. It gives every indication of a life of at least four years before repairs will begin to be necessary.

An experience of more than two years has likewise demonstrated the suitability of a concrete base of four inches in thickness where the subgrade is firm and hard or can be made so and likely to remain so; and in most cases where the traffic is normal, with a daily volume of up to, say, 500 to 600 vehicles, the four-inch cement concrete base with a bituminous top of one half to three eighths inch in thickness is being constructed. If the concrete is laid over adobe or other bad material, the base is thickened to five or six inches. The width of the paving is generally fifteen feet, exclusive of the shoulders. Where the traffic is very great in volume, as on the peninsula south of San Francisco, the paving is made wider, from twenty to twenty-four feet, and the wearing surface is thicker, ordinarily one and one half inches of asphalt or asphaltic concrete.

A maintenance organization for the state highways was initiated in 1914 by the Highway Commission and is being established in all of the seven divisions of the work for the utilization of the money made available in the State's portion of the motor vehicle fund.

## MOTOR VEHICLE DIVISION.

By an act passed by the legislature in 1913 (Chapter 326, Statutes 1913), it was made the duty of the Department of Engineering to register all automobiles and motoreycles, their owners or operators and all chauffeurs, and to issue licenses therefor. In short, the administration of the law requiring motor vehicles and their operators to be licensed by the State was placed in the Department of Engineering.

The law was approved May 31st, to go into effect on December 31, 1913.

The fee for motor vehicle licenses imposed by this law varies in amount according to the rated horsepower of the motor or engine, as follows:

For less than 20 horsepower-----	\$5 00
20 to 29 horsepower, inclusive-----	10 00
30 to 39 horsepower, inclusive-----	15 00
40 to 49 horsepower, inclusive-----	20 00
50 to 59 horsepower, inclusive-----	25 00
60 horsepower and over -----	30 00

The fee for motorcycles is \$2.00 and for chauffeurs' licenses, \$2.00.

All licenses must be renewed at the same fee each year. The collection of the fee was delegated to the State Treasurer.

In order to administer the law, a division was organized in the Department of Engineering for the purpose, designated Motor Vehicle Division. Mr. W. R. Ormsby was appointed superintendent of the division, and with a large force of clerks, stenographers and other assistants, installed in the State Capitol.

During the first months after the law became effective but few licenses were issued because actions had been commenced in the courts to test the validity of the act, and until a decision was handed down but few automobile owners applied for licenses.

After the decision of the Supreme Court sustaining the law and until the present writing, about 120,000 automobile and 21,000 motorcycle licenses were issued. With each automobile license is given two number plates, bearing the license number, to be attached to the car. The plates used in 1914 weighed three pounds a pair, and as 123,000 pairs were purchased the weight of the number plates used during the year amounted to 180 tons, or eight carloads of 22½ tons each.

The plates purchased for 1915 are somewhat lighter in weight.

It being impracticable to test the engines of vehicles for which license is desired, the Division accepted the rating placed upon them by the makers.

It was discovered, however, that this rating was not always true. Some makes of engines were found which were actually of greater horsepower than the rating indicated and as this was manifestly unfair to those whose engines were correctly rated, the Department made inquiries to obtain a reasonably correct method of deducing the power of an internal combustion engine from the dimensions of the parts through which it derives its power.

Professor Wm. D. Ennis, member of the American Society of Mechanical Engineers, Professor of Mechanical Engineering at the Polytechnical Institute of Brooklyn, New York, has evolved a formula based upon the thermodynamic principles underlying the generation of power

in an internal combustion cylinder working under the following conditions:

(1) A pre-compression pressure of 12 pounds per square inch, absolute, and a temperature of 200 degrees Fahrenheit.

(2) Compression takes place along a curve,  $P.V.^{1.3}$ , which equals a constant.

(3) Temperature after compression, 600 degrees Fahrenheit.

(4) Temperature after ignition, 3,000 degrees Fahrenheit.

(5) Expansion along a curve,  $P.V.^{1.3}$ , a constant.

The formula derived from the foregoing is expressed thus:

$$\text{H.P.} = \frac{a l r}{C} \text{-----} (1)$$

H.P. = Horsepower.

a = area of cylinder bore in square inches.

l = length of stroke in inches.

r = revolutions of crankshaft per minute.

C = Constant derived from above conditions = 12,620.

The area of a cylinder is found by the equation:  $0.7854d^2$ , where d = diameter of the bore.

The "piston travel," i. e., the distance the piston travels at each revolution of the crankshaft is twice the length of stroke, and reduced to feet is expressed thus:

$$\frac{2l}{12} \text{ or } \frac{l}{6} \text{-----} (2)$$

The "piston speed," (s), in feet per minute is equal to the piston travel multiplied by the number of revolutions per minute, or:

$$s = \frac{l r}{6} \text{-----} (3)$$

Per contra,  $l r = 6 s$

The Institute of Automobile Engineers found from actual tests of automobile engine performances that the relation between the piston speed and the cylinder dimensions could be expressed by the formula:

$$s = 600 \left( \frac{l}{d} + 1 \right) \text{-----} (4)$$

Since  $\frac{l r}{6} = s$ , and  $600 \left( \frac{l}{d} + 1 \right) = s$ , then

$$l r = 3600 \left( \frac{l}{d} + 1 \right) \text{-----} (4)$$

Substituting this value of l and r in the formula (1) above, in which  $\text{H.P.} = \frac{a l r}{C}$  and also substituting for a, its equivalent  $0.7854 d^2$ , formula (1) becomes:

$$\text{H.P.} = \frac{3600 \left( \frac{l}{d} + 1 \right) 0.7854 d^2}{12,620} \text{-----} (5)$$

which in turn can be reduced to several forms, thus:

$$\text{H.P.} = 0.224 \left( -\frac{1}{d} + 1 \right) d^2 \text{-----} (6)$$

$$\text{H.P.} = 0.224 \left( \frac{1+d}{d} \right) d^2 \text{-----} (7)$$

$$\text{H.P.} = 0.224 (1+d) d \text{-----} (8)$$

Re-stating the value of the elements of the last formula (8):

H.P. = Horsepower.

l = length of stroke in inches.

d = diameter of cylinder in inches, the rule for computing the horsepower of an automobile engine cylinder is given thus:

Add the stroke and diameter, both expressed in inches; multiply the sum by the diameter, and multiply that product by the decimal 0.224. For example:

What is the horsepower of a four-cylinder automobile engine with a three-inch bore and four-inch stroke?

Taking the formula (8) for one cylinder,  $\text{H.P.} = 0.224 (1+d)d$  and substituting figures for the letters, it becomes:

$0.224 \times 4 + 3 \times 3 = 0.224 \times 7 \times 3 = 4.704$ , which is taken to the nearest tenth, or 4.7. Multiply this result by the number of cylinders, or  $4.7 \times 4 = 18.8$  horsepower, as the answer.

Many imported engines have the dimensions expressed by the metric system of notation. In such cases the bore and stroke are given in millimeters, and the formula becomes:

$$\text{H.P.} = 0.000347 (1+d) d$$

wherein H.P. = horsepower,

l = length of stroke in millimeters,

d = diameter of cylinder in millimeters.

The Department of Engineering adopted the last above stated formula for determining the horsepower of motor vehicles, and the fee for all licenses issued for the current year has been computed by that formula.

Some automobile owners having cars the horsepower of which had been underrated, have made vigorous protests against the new ratings, but the Department submits that the new rates, being based upon a more correct method, are equitable, whereas the old rates were unfair.

The operations of the Motor Vehicle Division for the fiscal year ending June 30, 1914, are set forth in detail in the report of the superintendent, here following:

#### REPORT OF THE OPERATIONS OF THE MOTOR VEHICLE DIVISION— DEPARTMENT OF ENGINEERING.

By W. R. ORMSBY, Superintendent.

In accordance with instructions, there is submitted the following report of the operations of the Motor Vehicle Division of the State Department of Engineering, for the period beginning August, 1913, and terminating with June 2, 1914. This period is indicated because

the motor vehicle act requires that semiannual reports shall be made by the State Department of Engineering to the State Controller as of January 1st and July 1st of each year, therefore, a financial report for the second period of the year 1914 can not be made.

As the State Treasurer could not close his books for the first period ending with June 30, 1914, because of pending adjustments, the figures which follow show receipt of moneys to and including June 2d, while the expenditures shown are to and including June 30th.

Total receipts .....	\$1,179,986 75
Total expenditures .....	114,421 00
Net receipts .....	\$1,056,565 75

The apportionment of the net receipts in accordance with the motor vehicle act, to the counties, was made as shown by the following statement:

TABLE No. 48.  
County Apportionment of Motor Vehicle Receipts.

County	Gross cash receipts to June 2, 1914	Administration and operating expenses to July 1, 1914	Net cash receipts to June 2, 1914	Amount due counties	Amount due State of California
Alameda .....	\$80,964 00	\$7,911 23	\$73,052 77	\$93,527 88	\$33,526 89

Totals -----	\$1,170,986 75	\$114,421 00	\$1,056,565 75	\$528,282 73	\$528,283 72

The experience had in the administration of the law during the present year has shown the advisability of making minor changes in the law looking to greater efficiency, which have been submitted in the form of memoranda. Should these amendments be adopted by the coming legislature, it will assist materially in the enforcement of the law.

As approximately fifty per cent of the entire registrations of the State were made from the following named counties, San Diego, Imperial, Orange, Riverside, San Bernardino, Los Angeles, Santa Barbara, Ventura, San Luis Obispo, Kern, Inyo and Mono, it was deemed advisable for the accommodation of the residents of these counties, and to relieve the enormous congestion at the Sacramento office at the busy period of the year, to wit: December and January, to establish a branch office in the city of Los Angeles, which has been done. While, of course, it increases the expenses of the department, the increase is more than compensated for by the greater efficiency of the work, and after the period of great rush in the above mentioned months, the expenses will be reduced to the minimum. The cost of maintaining it is inconsiderable as compared with its value to the public of those counties it is intended to serve. The records are kept at the office of the Division in the State Capitol.

For the purpose of an analysis of the expenditures of the Division for the same period as the receipts shown, to wit: to June 2, 1914, the expenditures are given as \$100,528.48. This expenditure is made up of the following items and against each is shown the per cent it bears to the receipts for license fees:

TABLE No. 49.  
Cost of Operation of Motor Vehicle Division (Including Treasurer's Division) for the Period August 10, 1913, to May 31, 1914.

	Pay rolls	Expenses	Stamps	Typewriters	Express	Printing	Furniture, etc.	Plates, seals and badges	Total

<i>Department of Engineering.</i>			
Contingent expense (Ch. 705, 1911):			
Balance -----	5,778 98		
Ch. 40, 1913-----	2,000 00		
Ch. 680, 1913-----	25,000 00		
	32,778 98		
Expended -----		23,766 54	
Balance -----			9,012 44
Contingent expense (Ch. 524, 1913):			
Appropriation -----	66 65		
To pay deficiency in appropriation for sixty-second fiscal year—expended-----		66 65	
Balance -----			0 00
Contingent expense—printing (Ch. 705, 1911):			
Balance -----	3,307 90		
Expended -----		2,352 23	
Balance -----			955 67
Contingent expense—printing, etc. (Ch. 680, 1913):			
Appropriation -----	5,000 00		
Expended -----		2,084 93	
Balance -----			2,915 07

# INDEX.

## A

	PAGE.
Accounting Division .....	17
Adams, Frank .....	158
Advisory Board, composition of .....	13
Functions of .....	13
Personnel of .....	17
Advisory Committee, legislative, on State roads .....	236
Agnews State Hospital, water supply, storm water, drains, soil drainage .....	24
Alexander, Gen. George S. ....	60
Alfalfa, irrigating, cost of .....	170
Irrigation, effects of .....	181
Alpine State road, description of .....	235
Anderson, Rasmus .....	111
Antagonistic industries .....	10
Appendix; Financial Statement .....	252
Appropriations, for improvement of rivers, by Congress and State Legislature .....	62
For State institutions .....	30
For flood control .....	69
Aqueduct, Los Angeles, water for irrigation .....	188
Architect, State, Report of .....	30
Architecture, Division of .....	30
Services, cost of .....	31
Area, delta islands .....	51
Great valley of California .....	52
Sacramento and San Joaquin Drainage District .....	71
Association, The Iron Canyon Project .....	120
Atherton, George A. ....	71
Automobiles, statistics of in California, influence of for good roads .....	241

## B

Bailey, E. A. ....	71
Banta Reclamation District, bank protection .....	107
Becket, S. H. ....	207
Belt Railroad, San Francisco Harbor Front .....	41
Board, Advisory, composition of, functions .....	13
Personnel .....	17
Consulting, composition of, functions .....	14
Personnel .....	17
Of Review, Iron Canyon Project .....	120
State Reclamation, created .....	67
Powers, jurisdiction .....	69
Personnel .....	71
State Harbor Commissioners, engineer for .....	13
Boggs, M. J. ....	17
Bond Commission, Irrigation District, duties and powers .....	116
Members of .....	115
Brannan Island, work on .....	104
Brewster, John A. ....	59
Bridges, draw, on by-passes .....	70
Over navigable streams .....	114
Brown, E. S. ....	17
Bryan, Kirk .....	155
By-passes, bridges over .....	70
In flood control project .....	61

## C

California Debris Commission .....	12
Caminetti Act .....	62
Calaveras River, damage by flood from .....	108
Carberry, R. S. ....	185-186
Chandler, W. F. ....	236

	PAGE.
Channels of rivers, inadequate to carry floods.....	58
Cheney, Major G. A.....	83-88
Chief Engineer U. S. A., recommendations for flood control.....	62
Chittenden, Major H. B.....	61
Clapp, W. B.....	65
Clark, W. O.....	154
Coal lands, reserved.....	122
Cogswell, Senator P. F.....	236
Collins Eddy, conditions and work at.....	102
Commission, California Debris, plans for flood control.....	61
Adopted by State.....	67
Estimate of cost.....	66
Estimates modified.....	68
Report of work in progress.....	83
Conservation, publications of.....	207
Dabney, plans of, for flood control.....	61
State Harbor, engineer for.....	13
State Highway, part of Department of Engineering.....	13
Personnel.....	17
Report of.....	242
Of Internal Improvements, created 1850.....	9
Irrigation District Bonds, composition, scope of investigations.....	115
Districts examined by.....	118
Commissioner of Public Works, office abolished.....	12
Successor of.....	100
State Debris, office abolished.....	12
State Highway, office abolished.....	12
Concrete, failure of, in harbor work.....	40
Conservation Commission, publications of.....	207
Measures, advocated, 1850.....	9
Consulting Board, composition of, functions.....	14
Personnel.....	17
Control of floods in Sacramento and San Joaquin related.....	69
Controller, State, Certificate of, on Irrigation District Bonds.....	117
Cook, Peter.....	67-71
Co-operation of State with U. S. Department of Agriculture.....	121
Geological Survey.....	121
Reclamation Service.....	120
Co-operative irrigation inquiry.....	156
Investigations of water resources.....	130
Cory, H. T.....	120
Cost of irrigating alfalfa.....	181
Of road maintenance, cause of heavy.....	232
Crouch Landing, conditions at.....	101
<b>D</b>	
Dabney, Major T. G.....	61
Dabney Commission, plan of, for flood control.....	68
Dam, Gibraltar.....	188
Mendocino State Hospital.....	25
Sonoma State Home.....	27
Dams, State supervision recommended.....	113
Darlington, N. D.....	17
Davis, George R.....	127
Debris, basin, Yuba.....	80
Commission, California, plan for flood control.....	62
Plan adopted by State.....	67
Report of work in progress.....	83
Commissioner, State, office abolished.....	12
Mining, effect of, on streams.....	53
Delta islands, area of.....	51
Formation of.....	52
Reclamation of, commenced.....	53

	PAGE.
Department of Engineering created.....	12
Composition of .....	13
Personnel .....	17
Department of Highways, State, abolished.....	12
District, Reclamation, Banta, Nos. 17 and 544, protection work.....	107
No. 535, protection work.....	104
Sacramento and San Joaquin Drainage, created.....	69
Area of .....	71
Districts, irrigation, co-operative, study of.....	159
State Engineer's jurisdiction over.....	115
Investigated by Bond Commission.....	118
Dole, R. B.....	154
Dredges, for flood control work.....	68
Dredges "Sacramento" and "San Joaquin," report on work done.....	72
Duty of water in irrigation.....	159
Duties of State Engineer enumerated.....	16
Dwyer, J. I.....	17

## E

Ebert, F. C.....	155
Economic Research, co-operation with United States.....	121
Educational institutions, State, enumerated.....	20
Edwards Break, protection work at.....	103
Eel River, bank protection on.....	111
Eleemosynary institutions, State, enumerated.....	20
Elkhorn Weir, clearing of.....	103
Ellery, Nathaniel .....	13
Ellis, A. J.....	155
Ellis, W. T., Jr.....	67-71
Emigrant Gap State Road, important improvements.....	234
Engineer, S. F. Harbor, Report of.....	36
State, office of, created 1878.....	11
Abolished, loss to State.....	12
State, office of, created 1907, duties of.....	14
Engineering, a governmental function.....	9
State Department of, created.....	12
Composition of .....	13
Duties and powers.....	14
Service at State institutions.....	21
Engines, gas, formulæ for calculating horsepower of.....	246
Enlarged homesteads .....	123
Ennis, Prof. Wm. D.....	246
Equipment at gaging stations.....	152
Expenditures for maintenance of State roads.....	237

## F

Failure of concrete in harbor structures.....	27
Fair, State, drainage and sewer system.....	29
Feather River, improvements effected.....	105
Navigation on, restored.....	106
Feeble-Minded Children, Home for, extension of sewer and water systems.....	27
Financial transactions of Department of Engineering, appendix.....	252
Flood control, appropriations for.....	69
Plans for, by Dabney Commission, 1904.....	61
By Debris Commission, 1907.....	62
By Manson & Grunsky, 1894.....	59
Problems throughout the State.....	77
Relation of, to navigation.....	70
Of Sacramento River dependent upon control of San Joaquin floods.....	69
Damage, by Calaveras River.....	108
Discharge of Sacramento River and tributaries.....	65
Compared with other streams.....	58
Flood measurements .....	110
Floods, course of, in Sacramento Valley.....	56
In Tulare Lake Basin.....	73

	PAGE.
Flow, annual, of Kern River.....	142
Of San Joaquin River and tributaries.....	144
Of streams in Sacramento Valley.....	138
in Tulare Lake Basin.....	143
Folger, G. A.....	71
Fountainhead Lake.....	136
Frankenheimer, Louis H.....	71
Freeport, bank repairs at.....	104
French, H. A.....	46

## G

Gage readings, Sacramento River at Sacramento.....	97
Gaging stations on streams of State.....	142
Equipment of.....	152
Table of.....	148
Streams, methods of.....	133
Gas engines, horsepower, formulæ for.....	246
Geologic history of great valley.....	51
Geological Survey, U. S., activities in California.....	122
Co-operation of State with.....	124
Gilmore, Prof. J. W.....	185
Girls, State School for.....	27
Gordan, Alexander.....	17
Great Valley of California, area.....	51
A Pleistocene lake.....	51
Irrigable lands in.....	153
Grimes, repairs to bank at.....	102
Grover, N. C.....	148, 154
Grunsky, C. E.....	11

## H

Hall, Wm. Ham.....	11
Hammon, W. P.....	90-96
Handy, F. C.....	25
Harbor front, San Francisco.....	36
Report of Engineer of.....	36
Harding, S. F.....	207
Hatch, F. W.....	17
Head of Sacramento River.....	136
Henny, D. C.....	120
Highway Act, State, \$18,000,000.....	13
Commission, State, part of Department of Engineering.....	14
Personnel of.....	17
Report of.....	242
Commissioner, State, office abolished.....	12
Highways, State, and State roads distinguished.....	229
Mileage constructed and under construction.....	243
Hilgard, Prof. ....	152
Hogue, W. H.....	71
Home, Sonoma State.....	27
Veterans'.....	21
Homesteads, enlarged.....	123
Hopson, E. G.....	120
Hospitals for insane, enumerated.....	20
Hoyt, J. C.....	148
Hutchins, Wells A.....	185
Hydraulic mining, menace to navigation.....	10

## I

Imperial Valley, duty of water in.....	185
Soils in, affected by irrigation.....	187
Water table in.....	186
Wells in.....	210
Institutions, State, enumerated.....	20
Internal Improvements, Commission of.....	9

	PAGE.
Investigations, drainage, irrigation, co-operative.....	124
Water resources .....	130
Underground waters, report on.....	154
Publications on .....	155
Islands, delta, areas—description of.....	52
Iron Canyon Project Association.....	120
Irrigation Project .....	120
Irrigable lands in Great Valley.....	153
In State .....	152
Irrigation, cost of, for alfalfa.....	181
Districts .....	118
Increased yield from.....	170
By pumping .....	177
Publications relating to.....	153
Irrigation development in southern California.....	188
Districts .....	159
Bonds of .....	114
Bond Commission .....	115
Investigated .....	117
Table of .....	118
Investigations, bibliography of.....	207
Status of, in California.....	207

## J

Jackson, Capt. Thos. A.....	87
Johnson, Governor Hiram W.....	17

## K

Kaweah River .....	143
Kern River basin.....	141
Flow of .....	142
King, Clarence .....	121
Kings River, changed conditions of.....	76
Flow of .....	143
Knights Landing, repairs to bulkhead at.....	103
Ridge cut .....	64

## L

Lake Tahoe State Road, description of.....	230
Work on .....	231
Lassen State Road, work on.....	235
Lee, Chas. H.....	155
Leighton, M. O.....	148
License fees, motor vehicle.....	24
Apportionment of .....	250
Longbridge, Prof.....	152
Lower California (Mexico), wells in.....	223

## M

Mackenzie, Brigadier General A.....	87
Mad River, bank protection.....	111
Maintenance, heavy costs, on State roads.....	232
Expenditure for, on State roads.....	237
Fund for State roads.....	236
Manson, Marsden .....	11
Marshall, Brigadier General W. L.....	120
Marshall, R. B.....	127
Martin, W. F.....	63
McClatchy, V. S.....	67, 71
McClure, Wilbur F.....	13
McDougall, George B.....	14
McGlashen, H. D.....	148, 155
McKinstry, Lieutenant Colonel C. H.....	87, 88
Meinzer, W. O.....	154
Mendell, Colonel Geo. H.....	61
Mendenhall, W. C.....	154, 155

	PAGE.
Mendocino State Hospital.....	25
Meridian, alarming conditions of banks at.....	102
Mexico, wells in (Lower California).....	223
Military building and institutions, State.....	21
Mining debris, effect on river channels.....	53
Hydraulic, a menace to navigation.....	10
Miners' inch of water, defined.....	134
Mono Lake Basin State Road.....	231
Monthly use of water for irrigation.....	198
Mormon Slough, floods in.....	108
Motor Vehicle Division.....	17
Report of.....	246
Motor Vehicles, license fees.....	246
Apportionment of, to counties.....	249
Mountain reservoirs, surveys of.....	110
Muller, J. W.....	155
Murphy, E. C.....	63
Myers-McKinney State Road.....	234
<b>N</b>	
Napa State Hospital.....	26
Navigable streams, bridges over.....	114
Navigation of by-passes safeguarded.....	70
Relation of to other interests.....	54
Reservoirs may aid.....	54
Newman, Jerome.....	36
Nelson, Prof. J. W.....	207
Norwalk State Hospital.....	26
Normal schools, State, enumerated.....	20
Nourse, M. A.....	61
<b>O</b>	
Oil lands in California, reserved.....	122
Ormsby, W. R.....	247, 249
<b>P</b>	
Packard, Walter E.....	185-186
Paradise Bend, bank protection near.....	107
Peterson, O. W.....	110-120
Petroleum reserves.....	122
Piers, San Francisco Harbor front.....	38, 39, 40
Pit River survey, for reservoirs.....	110
Potash lands.....	122
Powell, J. W.....	121
Power, water, in California.....	144
Plants.....	145
Possibilities.....	147
Powersite reserves.....	122
Public water reservoirs.....	123
Publications relating to irrigation.....	153
Pumping, irrigation by.....	177
Plants in California.....	178
Punitive Institution, State.....	20
Purchasing Division.....	46
<b>R</b>	
Railroad, San Francisco Belt.....	41
Raymond, Major S. A.....	83
Reclamation Board, State.....	67
Of Delta Islands.....	53
Districts, Banta.....	107
No. 17.....	107
No. 535.....	103
No. 544.....	107

	PAGE.
Redwood Park State Road.....	234
Rees, Col. Thos. H.....	88
Reformatories, State.....	20
Reservoirs to aid navigation.....	54
Mendocino State Hospital.....	25
Mountain, survey for.....	110
Resources, water.....	130
Richardson, Major Henry B.....	61
River gage heights at Sacramento.....	91
Improvement by dredging impracticable.....	55
Rights of way for.....	110
Riparian rights opposed to irrigation.....	11
Road maintenance fund from motor vehicle licenses.....	236
Redwood Park, State.....	234
Roads and highways, State, separate systems.....	229
Good, influence of automobile traffic for.....	241
State, names of, and location.....	229
Statistics of.....	238
Traffic census on.....	231
Robertson, Ralph D.....	175-207
Rocky Point, protection work needed.....	103
Rush, Senator Benjamin.....	236

## S

Sacramento City, gage record at levee protection.....	97
and San Joaquin Drainage District.....	69
Area of.....	71
Levees, mileage of.....	72
River, drainage basin.....	136
Flood flow of.....	57
Compared with other rivers.....	58
Floods, control of, plans for.....	59
Course of, through valley.....	56
Head of.....	136
Improvements on, extended.....	101
System, annual flow of.....	138
Tides in.....	54
Valley, duty of water in.....	160
Irrigable land in.....	153
Irrigation investigations in.....	160
San Francisco Harbor Front, Report of Engineer.....	36
San Joaquin River and tributaries, flow of.....	143
Improvement work executed.....	104
Survey for flood control.....	106
Valley, description of.....	140
Typographic survey of.....	125
Schuyler, James Dix.....	11
Seavey, Clyde L.....	236
Sherman Island, bank protection.....	104
Sierra State Road, abandonment recommended.....	233
Smith, W. J.....	17
Smith's Canal, bank work near.....	107
Soils affected by irrigation.....	187
Sonoma State Home, sewerage.....	27
Water supply.....	23
Sonoma-Mono State Road.....	231
Southern California State Hospital.....	26
Stabler, Herman.....	154

	PAGE.
State Architect .....	30
Department of Engineering.....	12
Of Highways .....	12
Engineer .....	16
Engineering Department, abolished.....	12
Fair grounds of.....	29
Highway Commission .....	14
Report of .....	242
Commissioner, office abolished.....	12
Constructed .....	243
Distinguished from State roads.....	229
Department, abolished .....	12
Projected .....	244
Institutions, appropriations for.....	30
Architectural service for.....	31
Engineering service for.....	21
Enumerated .....	20
Reclamation Board .....	67
Roads, Advisory Committee.....	236
Distinguished from State highways.....	229
Expenditures for maintenance.....	237
Maintenance costs, cause of heavy.....	232
Names and location of.....	229
Names of, commemorating history.....	230
Statistics of .....	238
Traffic census of.....	239
Supervision over bridges on navigable waters.....	114
Dams, advocated .....	113
Stern, Chas. F.....	17
Stockton State Hospital.....	23
Stream measurements, methods of.....	133
Stubblefield, G. ....	120
Survey, topographic, of State.....	125
San Joaquin Flood Control.....	125

## T

Tait, C. E.....	207
Tatterson, Geo. W.....	11
Tides, tidal action in Sacramento River.....	54
Tisdale Weir, repairs to.....	102
Topographic Survey of State.....	125
Towne, Burton A.....	11
Traffic on State roads.....	239
Trinity-Humboldt State Road.....	232
Tulare Lake .....	143
Floods of .....	73

## U

United States Geological Survey, activities in California.....	121
Co-operation with State.....	124
Hydrographic report .....	148
Topographic Surveys, report of.....	127
Office of Experiment Stations, co-operation of with State, report.....	158
University of California, co-operation of, with Department of Engineering.....	156
Bulletins of, on Irrigation.....	207

## V

Veihmeyer, Frank I.....	185
Ventura State School for Girls.....	27
Veterans' Home for Disabled Soldiers.....	21

STATE OF CALIFORNIA

## REPORT ON PIT RIVER BASIN

BY THE RECLAMATION SERVICE OFFICE  
AT PORTLAND, OREGON

---

E. G. HOPSON, Supervising Engineer  
O. W. PETERSON, - - Engineer

---

APRIL, 1915

CALIFORNIA  
STATE PRINTING OFFICE  
1915

PIT RIVER GORGE BELOW FALL RIVER MILLS.

# TABLE OF CONTENTS.

	PAGE.
<b>INTRODUCTION AND HISTORY.</b>	
Introduction .....	9
Prior Investigations .....	13
Present Investigation .....	14
<b>GENERAL FEATURES OF THE BASIN.</b>	
Definition .....	15
Boundaries and Adjacent Areas .....	15
Topographic Divisions .....	16
Mountain Peaks and Lakes .....	17
Geology .....	17
Forest Cover .....	19
Precipitation .....	22
Relation Between Topographic Features and Precipitation in Northern California .....	25
Zone of Heavy Precipitation Easterly from Mt. Shasta .....	27
Aridity, the Predominating Feature East of the Cascades .....	28
Climatic Features .....	28
Temperatures .....	28
Frosts .....	31
<b>RUN-OFF.</b>	
General .....	31
Classification of Catchment Area .....	31
General .....	31
Mountain Areas .....	32
Porous Lava Areas .....	33
Plateau Areas .....	34
Stream Flow Data .....	35
Gaging Stations .....	35
Flow of Pit River at Big Valley .....	36
Pit River near Canby, California .....	39
Pit River near Bieber, California .....	40
Pit River at Henderson, California .....	42
Pit River near Ydalpom, California .....	43
South Fork of Pit River near Ivy, California .....	45
West Valley Creek, near Likely, California .....	46
Ash Creek at Adin, California .....	47
Fall River at Fall River Mills, California .....	48
Hat Creek at Hawkins Ranch, near Hat Creek, California .....	49
Hat Creek at Hat Creek, California .....	50
Rising River near Cassel, California .....	51
Burney Creek near Burney, California .....	52
Kosk Creek near Henderson, California .....	53
Montgomery Creek at Montgomery Creek, California .....	54
Squaw Creek near Ydalpom, California .....	55
McCloud River near Gregory, California .....	56
McCloud River at Baird, California .....	58
<b>LAND CLASSIFICATION.</b>	
Forested Areas .....	60
Open Range .....	60
Bottom Lands .....	61
Bench Lands .....	62
Irrigable Lands .....	62

## CROPS.

Irrigated Lands .....	64
Non-irrigated Lands .....	65
Contributed Articles .....	66
By Mr. Abbott M. Green .....	66
By Mr. H. C. Watson .....	68
By Mr. Wm. Paulk .....	69

## PRESENT APPROPRIATIONS AND USES OF WATER.

General .....	71
Character of Investigation .....	71
Summer Flows Generally Used .....	71
Pioneer Irrigation Systems and Methods .....	71
Use of water .....	72
Water Rights .....	72
North Fork Valley .....	72
Lands and Crops .....	72
Water Supply .....	72
Comments .....	72
Jess Valley .....	73
Lands and Crops .....	72
Water Supply .....	72
Comments .....	73
West Valley .....	73
South Fork Valley .....	73
Lands and Crops .....	73
Water Supply .....	73
Irrigation Works .....	74
Comments .....	75
Miscellaneous Measurements of Water Flow .....	75
Warm Springs Valley .....	76
Lands and Crops .....	76
Water Supply .....	76
Comments .....	76
Miscellaneous Measurements of Water Flow .....	77
Stone Coal Valley .....	77
Ash Creek Valley .....	77
Round Valley .....	77
Big Valley .....	78
Lands and Crops .....	78
Water Supply .....	78
Principal Irrigation Works .....	78
Comments .....	79
Miscellaneous Measurements of Water Flow .....	79
Widow Valley .....	79
Little Hot Springs Valley .....	80
Dixie Valley .....	80
Little Valley .....	80
Pit River, Between Big Valley and Fall River Mills .....	80
Fall River Valley .....	80
Topography .....	80
Lands and Crops .....	81
Principal Irrigation Works .....	81
Comments .....	82
Hat Creek Valley .....	82
Burney Valley .....	83
Goose Valley .....	83

	PAGE.
PRESENT APPROPRIATIONS AND USES OF WATER—Continued.	
Cayton Valley .....	83
Pit River—Burney Creek to Sacramento River.....	84
Bench Land Areas.....	84
Diversion from Cedar Creek to Madeline Plains.....	84
Diversion from East Hat and Lost Creeks to Battle Creek.....	84
Summary of Irrigated Areas.....	85
POSSIBILITY OF DEVELOPING ADDITIONAL SUPPLIES FROM OUTSIDE OF BASIN.	
General Statement .....	86
Willow Creek .....	86
Description .....	86
Supply .....	87
Method of Diversion Possible.....	87
Comments .....	87
Goose Lake .....	89
Location and Description.....	89
Quality of Water .....	90
Lake Elevation, Areas and Capacities.....	90
Water Supply .....	91
Metered Stream Flow.....	92
Unmetered Run-off .....	93
Summary of Existing Conditions.....	93
Probable Changed Condition of Inflow Due to Irrigation.....	94
Possibility of Diverting a Supply from Goose Lake for the Pit Basin.....	95
Canal Along Base of Warners to North Fork Pit River.....	96
Summary .....	96
STORAGE POSSIBILITIES IN THE BASIN.	
General Statement .....	97
General Features of Construction.....	98
Earth Dams .....	99
Earth and Rock Dams.....	100
Prices Used in Estimates.....	100
Jess Valley Reservoir Site.....	100
Location and Description.....	100
Water Supply .....	101
Damsites .....	102
Reservoir Capacity and Areas.....	103
Construction Details .....	103
Estimates of Cost.....	104
West Valley Reservoir Site.....	104
Warm Springs Valley Reservoir Site.....	105
Location and Description.....	105
Water Supply .....	105
Damsite .....	110
Construction Details .....	110
Estimates of Cost.....	110
Round Valley Reservoir Site.....	112
Location and Description.....	112
Water Supply .....	113
Damsite .....	114
Construction Details .....	114
Estimate of Cost.....	115
Big Valley Reservoir.....	115

	PAGE.
STORAGE POSSIBILITIES IN THE BASIN—Continued.	
Miscellaneous Storage Sites.....	116
Introductory .....	116
Delta Lake .....	116
Crooks Canyon .....	117
Big Sage .....	117
Sites on Pit River Between Warm Springs and Big Valley.....	117
Widow Valley .....	118
Willow Creek .....	118
Ash Creek Valley.....	118
Dixie Valley .....	119
Little Valley .....	119
Great Spring on Hat Creek.....	119
Summary of Storage Possibilities.....	120
AREAS IRRIGABLE BY NATURAL OR UNREGULATED STREAM FLOW.	
Fall River Valley.....	120
Hat Creek Valley .....	121
Bench Lands Southwest of Cassel.....	121
Bench Lands West of Cassel and Lands in Burney Valley.....	121
Summary of Proposed Diversions from Hat Creek.....	122
Miscellaneous Areas .....	122
AREAS IRRIGABLE UNDER STORAGE RESERVOIRS

## INTRODUCTION AND HISTORY.

---

### INTRODUCTION.

This report deals with investigations made in 1914 and 1915 by the United States and the State of California acting in cooperation, through certain engineers of the Reclamation Service duly authorized for the purpose, and the Engineering Department of the State of California, pursuant to the following agreement:

*"This agreement, made this 27th day of May, 1914, between the United States of America, by E. G. Hopson, Supervising Engineer, United States Reclamation Service, thereunto duly authorized by and subject to the approval of the Director of the United States Reclamation Service, pursuant to the act of June 17, 1902 (32 Stat. 388), and acts amendatory thereof and supplementary thereto, hereinafter referred to as the Reclamation Law, and the State of California, acting by and through the Advisory Board of the Department of Engineering of said State, witnesseth, that,*

*Whereas, an act of the Legislature of the State of California, Chapter 551, Statutes of 1911, approved April 21, 1911, appropriates the sum of two hundred thousand dollars (\$200,000) to be expended by the Department of Engineering for the purpose of rectifying and improving the channels of the Sacramento, San Joaquin and Feather rivers, and such other river channels of the State as the Department of Engineering may determine, and to improve the navigability of said streams, etc.; and*

*Whereas, the Advisory Board of the Department of Engineering, at a regular meeting held February 26, 1914, approved and authorized the expenditure of two thousand five hundred dollars (\$2,500) from the appropriation made by Chapter 551, Statutes of 1911 aforesaid, for and in connection with the work herein provided for and described; and*

*Whereas, the Secretary of the Interior, under the provisions of the Reclamation Law, has allotted the sum of two thousand five hundred dollars (\$2,500) to be expended on such work in cooperation with the State of California on account of its relation to the irrigation possibilities of the valleys and territory of said State for which the waters hereinafter referred to may constitute an available supply; and*

*Whereas, in accordance with aforesaid act of the Legislature of the State of California, approved April 21, 1911, the terms and provisions of this contract in the text and form herein set out have been exhibited to, and the work proposed to be done hereunder has been approved by, the officers of the Government of the United States, acting under the Department of War thereof, having charge of river work in California, said approval being designated in writing and placed on file with the State Department of Engineering, certified copy thereof being hereto attached and marked Exhibit A;*

*Now, therefore*, in consideration of the premises and the mutual covenants and agreements herein contained, it is stipulated and agreed between the parties hereto as follows:

1. That investigations and surveys be made in that portion of the State of California included within Pit River drainage area to determine the feasibility of constructing reservoirs and other works necessary or desirable for the full utilization of the waters of the Pit River and its tributaries in improving navigation on the Sacramento River and in other public interests, also to determine the most advantageous utilization of the public land, natural lakes, reservoir sites, waters and other resources of the State and nation within the said drainage area for irrigation or other public uses;

2. That all surveys and investigations contemplated hereunder shall follow a general plan of operation jointly agreed upon by the State Engineer of California and the Reclamation Service through its proper officers;

3. That on completion of the work aforesaid all field notes, original plans, and other data acquired or prepared during said investigations shall be filed with the United States Reclamation Service, but shall be accessible at all times to the State Engineer or his duly authorized representatives upon application, and a copy thereof shall be furnished the State Engineer for official record on request;

4. That on completion of the work herein contemplated a report shall be promptly made and published, outlining the scope of the investigations made, giving detailed statements and estimates of each project investigated, with suitable explanatory plans, maps and other documents as exhibits, together with a summary of expenses incurred in the investigations; that such report shall also contain specific conclusions and recommendations as to the future policy considered most advisable to be followed by the United States and the State of California in utilizing, reserving, or disposing of public lands, waters, reservoir and power sites, and other natural utilities in conformity with the plan of development indicated by this investigation as being to the highest public advantage; that these conclusions and recommendations shall be jointly agreed upon by the State Engineer and the officer of the Reclamation Service having jurisdiction, or in the event of their failure to agree thereon each of them shall submit separate conclusions and recommendations, both of which shall be embodied in the report and published; that such advance reports shall be prepared and furnished to the State Engineer and the Reclamation Service as may be required and agreed upon; that in all reports and publications it shall be clearly shown that the United States and the State of California are joint contributors to the work and the names of cooperating officers shall be stated;

5. That in carrying out all work hereunder one half of the expense shall be borne by the State of California, one half by the Reclamation Service, the total expense to be incurred by each not to exceed two thousand five hundred dollars (\$2,500); that each month a detailed statement of costs, together with report of work

accomplished, shall be made to the Reclamation Service and to the State Engineer of the total expense for the last preceding month, such expense including all proper costs chargeable to the field office and administrative work of the investigation. Such statement shall also give the proportion of expense that has been borne by both the Reclamation Service and the State, and from time to time during the progress of the work such necessary adjustment shall be made in the expenditures on salaries and other expenses by the Reclamation Service and by the State as will equalize the aggregate expenditure by each party, so that at the conclusion of the work the proportion of the expense borne by each shall be equal;

6. That all employees engaged in this investigation paid by the Reclamation Service shall be subject to the established rules and regulations of the United States Civil Service Commission governing such employees; that all employees paid by the State shall be subject to such rules and regulations as the State may provide in such cases; *provided*, that all employees paid by the State shall be subject also to such rules and regulations as the Reclamation Service may establish for the conduct of these investigations, and that in the selection of employees preference will be given to residents of the State, other considerations being equal.

7. No member of or delegate to Congress, or resident commissioner, after his election or appointment, or either after or before he has qualified and during his continuance in office, shall be admitted to any share or part of this contract or agreement, or to any benefit to arise thereupon. Nothing, however, herein contained, shall be construed to extend to any incorporated company, where such contract or agreement is made for the general benefit of such incorporation or company, as provided in section 116 of the act of Congress approved March 4, 1909 (35 Stat. 1109).

*In witness whereof*, on the day and year first above written, the United States has caused these presents to be signed in its behalf by E. G. Hopson, Supervising Engineer, United States Reclamation Service, and the State of California has caused the same to be executed in its behalf by the Advisory Board of the Department of Engineering through W. F. McClure, State Engineer, thereunto duly authorized by resolution of the said Board, heretofore made.

UNITED STATES OF AMERICA,

By E. G. HOPSON,

Supervising Engineer U. S. Reclamation  
Service.

STATE OF CALIFORNIA,

By the Advisory Board of the  
Department of Engineering,

By W. F. McCLURE, State Engineer.

[SEAL]

Approved: June 11, 1914.

DEPARTMENT OF ENGINEERING,  
State of California,  
Sacramento, Cal.

May 15, 1914.

GENTLEMEN: Referring to the draft of an agreement between the United States Reclamation Service and the State of California transmitted with your letter of May 11, 1914, covering the arrangements for the joint use of Federal and State funds for the purpose of making investigations and surveys on the drainage area of Pit River, California, to determine the feasibility of constructing reservoirs and other works for the full utilization of the waters of Pit River in improving navigation on the Sacramento River and in other public interests, and the preparation of a report upon the result of such investigations, I would state that the work proposed appears to me to be a proper one on which to expend the amount proposed from the appropriation provided in the Act of the Legislature approved April 21, 1911, as affording a useful addition to the engineering information requisite for a study of the means of improving the navigability of the Sacramento River.

Respectfully,

(Signed) S. A. CHENEY,  
Major, Corps of Engineers.

“EXHIBIT A.”

“Whereas, There has been exhibited to this, the Advisory Board to the Department of Engineering, of the State of California, a proposed agreement between the United States of America, by E. G. Hopson, Supervising Engineer, United States Reclamation Service, and the State of California, acting by and thru the Advisory Board, of the Department of Engineering of the State of California, under the terms of which it is proposed to expend the sum of Five Thousand Dollars (\$5,000) cooperatively; one half of said sum to be expended from the funds at the disposal of said United States Reclamation Service, and the other half to be expended from the appropriation by the Legislature of the State of California, made by Chapter 551, Statutes 1911, approved April 21st, 1911.

Now, therefore, be it resolved, That W. F. McClure, State Engineer, of the Department of Engineering, of the State of California, be and he is hereby authorized and empowered to execute said above mentioned resolution on behalf of the State of California and of this the Advisory Board of the Department of Engineering, of the State of California.

OFFICE OF THE DEPARTMENT  
OF ENGINEERING of the } ss.  
State of California. }

I, Earle Freeman, Secretary of the Department of Engineering of the State of California, hereby certify that the foregoing is a full, true and correct copy of a resolution adopted at a meeting of the Advisory Board of the State Department of Engineering, held May 27, 1914.

Witness my hand and the seal of the Department of Engineering of the State of California this 27th day of May, 1914.

[SEAL]

(Signed) EARLE FREEMAN,

Secretary of the Department of Engineering  
of the State of California."

In accordance with the provisions of the above agreement an understanding was reached between the two parties as to the scope and character of the operations, and the method of execution, by letters between the State Engineer of California and the Supervising Engineer of the Reclamation Service at Portland, Oregon, during the month of July, 1914. Field and office work has been performed by the Reclamation Service acting through E. G. Hopson, Supervising Engineer, who has personally directed operations. O. W. Peterson, Engineer, has acted as principal assistant in the work. Work commenced on July 25, 1914, and was completed in March, 1915. During the progress of the work the State Department of Engineering has been in general touch with its various features, and on completion of this report it has given careful study to all the matters contained therein and especially to the conclusions and recommendations.

The principal purpose of this investigation is to prepare "specific conclusions and recommendations as to the future policy considered most advisable to be followed by the United States and the State of California in utilizing, reserving, or disposing of public lands, waters, reservoir and power sites," etc., and it is required that "these conclusions and recommendations shall be jointly agreed upon by the State Engineer and the officer of the Reclamation Service having jurisdiction," etc. In conformity therewith these officers have conferred in these and other matters set forth in this report, and are in full agreement, in witness whereof they have affixed their signatures at the end of the chapter dealing with said Conclusions and Recommendations.

### PRIOR INVESTIGATIONS.

In 1903-4 the Reclamation Service made a reconnoissance of the entire Pit River basin to determine the amount of storage that might be impounded for the irrigation of lands in Sacramento Valley. Five reservoir sites were located and surveyed, viz., Jess, West, Warm Springs, Round and Big Valleys. A hydrographic

survey was made of Goose Lake, a possible source of supplementary supply. Preliminary estimates of storage capacity and cost, based on the results of this early investigation, are contained in the report of the California State Water Commission for the year 1912.

In 1909 the Reclamation Service reconsidered the Big Valley Reservoir in connection with a study then being made of Iron Canyon project, and two shafts were sunk at the damsite.

Document No. 81 of the first session of the Sixty-second Congress, published June 29, 1911, considers the feasibility of storage at Big Valley for the controlling of floods in the Sacramento Valley.

In 1912 the Department of Agriculture, in cooperation with the California Conservation Commission, gathered information as to the extent of irrigation development in the Pit River basin, showing the areas irrigated, types of crops grown, etc. These data were published in 1912 report of the Conservation Commission of the State of California.

During 1914 an investigation by the United States Reclamation Service of the Iron Canyon project gave consideration to the use of reservoirs in the Pit River basin and the general subject of water supply from that river. The report dealing with the Iron Canyon project was published by the Reclamation Service in November, 1914, and is frequently referred to in this report.

### **PRESENT INVESTIGATION.**

This investigation, commenced late in July, 1914, was completed in March, 1915. The months of August, September and October, 1914, and a part of February, 1915, were spent in making a field examination. The present areas of agricultural lands, both irrigated and irrigable, were outlined and the nature of present water supplies investigated. All reservoir sites previously considered were inspected and an extended reconnoissance was made to locate additional sites. Studies have been made of possibilities of improving present conditions by fully irrigating such areas as are now inadequately irrigated, and also watering additional irrigable lands now unsupplied.

A new reservoir site of large storage capacity and supply was located in Fall River Valley. Sufficient elevations were obtained to determine approximately the extent to which lands in the valley would be affected by this storage. A survey was made also of the damsite, situated just below the junction of Fall and Pit Rivers.

At Jess Valley a topographic survey was made of a damsite at the immediate outlet.

The principal work performed in this investigation consisted, however, of reviewing, rearranging and classifying the older studies, and bringing them up to date and in harmony with a comprehensive treatment of the resources of the entire basin. In completing this task

many different authorities have been consulted on such related topics as water power, hydrography, meteorology, geology, agriculture, forestry and transportation. Much valuable information and assistance have been received from local residents, from representatives of the United States Forest Service, the Weather Bureau and the Water Resources Branch of the Geological Survey, and from various public spirited individuals interested in the development of this territory.

---

## GENERAL FEATURES OF THE BASIN.

---

### DEFINITION.

This includes all of the territory hydrographically tributary to the Pit River above its junction with the Sacramento.

### BOUNDARIES AND ADJACENT AREAS.

The basin of Pit River, including about 6,000 square miles of north-eastern California, lies in Modoc, Lassen, Siskiyou and Shasta Counties. It does not include the Goose Lake Basin, which, although originally a part of this basin, has during recent ages ceased to contribute any appreciable discharge to the Pit, and has practically become a part of the great interior drainage system which does not have an outlet to the sea.

Lassen Peak, the most southerly of the great volcanic peaks in the northwest, is practically at the extreme south limit of the Pit River Basin. From this point the basin extends northwesterly to the Sacramento River, 12 miles north of Redding, and thence almost due north along the ridge directly west of the McCloud to Mt. Shasta. The boundary of the basin extends in the other direction northeasterly to the south terminus of the Warner Range; thence northerly along the crest of this range to a point opposite the south end of Goose Lake. All of the above described boundary of the basin or the divide, as it is properly termed, is extremely well defined, generally by sharp mountain ridges, some of the peaks being among the highest and most celebrated of the continent. The rest of the divide between Shasta and the Warner Range is, however, not well defined topographically; moreover, the extremely porous structure of the region renders any determination of the divide by topographic consideration alone, unsatisfactory.

Surface contours would indicate a divide passing eastwardly from Shasta to the summit of Glass Mountain and thence almost directly east to the southern limit of Goose Lake, as shown on Plate 4. On the other hand, unmistakable indications furnished by the yield of

the great springs of Fall River point to a drainage basin extending northerly, perhaps as far as Tule and Lower Klamath Lakes or to even include, in the territory northeast of Shasta, the drainage of Butte and Antelope Creeks.

Northeast of the Pit River Basin is the basin of Goose Lake. On the east lie the large alkali lakes that border the Nevada line. On the southeast are numerous local sinks. All of this region on the northeast, east and southeast of the Pit Basin is part of the Great Basin drainage system. On the north lies the drainage system of the Klamath River and Tule Lake. Southeast of Lassen adjacent drainage is toward the Feather River, while along the westerly side drainage is directly into the Sacramento.

### TOPOGRAPHIC DIVISIONS.

The basin may be roughly divided into three quite distinct topographic areas. The first is mountainous and lies west of a line between Shasta and Lassen. The second division is adjacent to and east of the first division and west of the Big Valley Range that extends almost directly south from Glass Mountain and follows practically the county lines between Modoc and Lassen Counties on the east and Siskiyou and Shasta Counties on the west. The third division, situate east of Big Valley Range, is mainly a plateau region, including, however, the lofty Warner Range. The general level of the plateau is from 4,000 to 6,000 feet above sea level, averaging about 1,000 feet higher than the average of second division.

From east to west the span across the plateau region between the Warners and the Cascades is nearly 100 miles; from north to south 50 miles. Big Valley and Sheffer mountains rise 2,000 to 3,000 feet above the adjacent plateaus. Big Valley Mountain, although of comparatively small height, marks an important change in conditions both topographic and climatic. To the east the valleys are 1,000 feet or more higher than to the west, and what is of special importance is that the amount of precipitation and the length of the crop growing season is appreciably less on the east than on the west of this mountain range.

Geologically the plateau region east of the Cascades, which includes the second and third topographic divisions, just referred to, is considered by Diller a part of the great continental platform. The Pit (as a part of the Sacramento) has the distinction of being one of the three rivers of the country which rises in this platform and finds outlet to the ocean. "In the United States there are only three rivers, the Columbia, the Klamath and the Sacramento (including the Pit), which cut across the entire mountain belt from the interior platform to the sea." (Diller, U. S. Geol. Survey.)

## MOUNTAIN PEAKS AND LAKES.

The following statements by Prof. Alex. G. McAdie appear in the reports by the United States Weather Bureau: "Shasta, 14,380 feet elevation, is one of the three great peaks on the Pacific Slope, standing like sentinels in a stretch of 700 miles, including the Sierras and Cascades. \* \* \* About two miles west of Shasta is Shastina, elevation 12,433 feet. There are six small glaciers surrounding the peak, known as Whitney, Bolam, Hottum (double), Wintum and Konwatikon. The mountain is snow-covered throughout the year, the snow cover extending down in an ordinary year to the 8,000-foot level during midsummer. There are numerous cinder cones and lava flows, showing the volcanic character of the region.

South of Shasta lies Lassen Peak, elevation 10,437 feet. To the east and north is a large area extending to the Warner Mountains. \* \* \* The most prominent peaks in this range are Bidwell, 8,551 feet; Fandango, 7,848 feet; Cedar, 8,308 feet; Warren, 9,668, and Eagle, 9,934 feet.

In the area between the Cascade Range and Warner Range are numerous lakes, of which the best known are Lower Klamath, Tule, Clear and Goose."

## GEOLOGY.

Recent report by the United States Reclamation Service on the Iron Canyon Project states: "The entire territory between Lassen on the south and Tule and Klamath Lakes on the north has even during comparatively recent years been the scene of tremendous volcanic activity. Hundreds of extinct craters and cinder cones are scattered throughout this area, which has been built up by successive flows of erupted matter. The most recent known flow of molten matter is at Lassen and is estimated by geologists to have occurred within 200 years. Even today such phenomena as hot springs, steam vents, not infrequent earthquake shocks, and the recent disturbances at Lassen are indications that the forces that have molded this territory in its present shape are by no means extinct.

"The territory immediately south of Tule and Klamath Lakes has in many respects characteristics that are remarkable, even for this territory. The famous Modoc lava beds, the scene of one of the last Indian fights, lie here. Immense, heaped up masses of shattered lava penetrated by fissures many miles in length and honeycombed by caverns and crevices in every direction are the predominant features. The country is difficult to reach and even more difficult to traverse, owing to its extremely rugged character."

The following quotations are from Diller, showing the relations of the mountains and valleys in and adjacent to the Pit River Basin and

particularly the geological structure of the Cascades and the plateau region on the east: "The belt of country in northern California and Southern Oregon lying between the Great Basin and the Pacific may be regarded as grouped naturally into two valleys and three mountain ranges. The Coast Range is separated upon the north by the valley of the Willamette, and upon the south from the Sierra Nevada by the broad depression drained by the Sacramento. Near the state line between Oregon and California the three ranges meet in common ground, among a group of ridges and peaks so complex as apparently to render the definition of the ranges a matter of considerable difficulty. It is true, nevertheless, that each range is characterized by its geologic development, and everywhere within this mountain plexus its limits are clearly defined.

"The volcanic ridge of Lassen Peak appears to be a continuation of the Sierras, but in reality \* \* \* it is the connecting link between the Sierras and the Coast Range, and itself belongs geologically to the Cascade Range. \* \* \*

"The Cascade Range is essentially a volcanic range stretching from Lassen Peak in California to Mt. Rainier in Washington, a distance of 450 miles. At both ends the lavas lap up on uplifted mountains of older rocks, the Sierra Nevadas in California and the Cascades in Washington, but between these two from the Columbia River in Washington to the Pit River in California for a distance of nearly 300 miles, the range is composed largely, if not wholly, of igneous rocks that have escaped from a great belt of volcanoes that form the range. The summit of the range is an irregular plateau strewn with many lava and cinder cones, of which each one marks the site of a volcanic orifice tributary to the upbuilding of the range.

"Where best developed, as shown in the Klamath and Columbia River sections, the body of lava forming the range is on an average about 4,000 feet in thickness, but in the greater volcanoes like Hood, Jefferson, Mazama (Crater Lake), Shasta and Lassen it rises to accumulations of 6,000 to 10,000 feet in thickness. The later foundations of the Cascade Range were laid in the Oregon embayment during the cretaceous and early Tertiary times, possibly before the ranges were distinctly outlined. The Tertiary volcanic effusions began in Oregon west of the Cascade Range during the Eocene and possibly a little later in the same epoch eruptions began in the base of the Cascade Range. During the later Tertiary the volcanic activity was greatest, and the bulk of the range, though partly uplifted, was in equal or perhaps in even greater measure upbuilt by flows of viscous andesitic lavas with much ejected material. Basalts are common and some acid lavas are known, but the great bulk of the range is andesitic in strong contrast with the great lava plains east of the Cascades,

LASSEN IN ERUPTION.

where the thin basalt flows spread out horizontally like sheets of water. The change from the plains to the mountain slope of the eastern base of the Cascade Range is abrupt and distinct, and due, for the most part, to the fact that the stiff viscous andesite lavas were able to build up steep slopes, while the superheated and highly viscous basalts spread out like water along the irregular mountain front.

"After the close of the Tertiary the volcanic activity waned, although eruptions occurred to within the historic period and possibly even to the present day if the outbursts from the summit of Lassen Peak develop so as to involve molten material.

"However that may be, there is no doubt that the Cinder Cone and its lava field 10 miles northeast of Lassen Peak resulted in one or more eruptions within a century or two. \* \* \* In general, however, the volcanoes of the Cascade Range are considered extinct, and the upbuilding of the Cascade Range completed as far as the actual accumulation of lava is concerned.

"Faulting that has played so large a role in the development of the Sierra Nevada and the Coast Range of California has not given general features to the volcanic mass of the Cascade Range. Small faults are common in the lavas southeast of Lassen Peak, forming lines of bluffs and bringing the ground water to the surface in large springs, a feature which is common in the Klamath Lake Region, and, as pointed out by Russell, along other portions of the range, but these faults have no effect on the general form of the range. \* \* \*

"To the younger flows of basalt the Lassen Peak district is indebted for the development of its most valuable agricultural and grazing lands. At the entrance of every canyon into which the basalt flowed the lava accumulated so as to form a dam for the streams of water. In this way lakes or swamps were produced, and from these, by the gradual accumulation of gravel, sand, mud, infusorial earth, and vegetable matter, the beautiful meadows of ——— and Dixie were produced." \* \* \*

It might be added that Jess, West, Little and a number of other mountain valleys in this basin show evidence of the same development. South Fork and Warm Springs Valleys indicate by gravel deposits and topographic features their former existence as lakes, while the outlets of Big and Fall River Valleys show evidence of erosion through old lava flows that once dammed their drainage.

## FOREST COVER.

Climatic conditions and especially precipitation are the chief factors in determining the extent and character or type of natural forest cover. A map showing approximately the stands of merchantable timber of different varieties as arbitrarily graded in 5,000 to 10,000, 10,000 to 20,000 and 20,000 and upwards of board feet per acre, has

been prepared. (See Plate 3.) In preparing this map, information was obtained from officials of four different forest reserve districts and from private individuals. Much of the territory has not as yet been cruised, and it was necessary to some extent to depend upon the personal opinion of various individuals. Probably there are many errors in detail in this map, but such defects are not sufficiently serious to detract from the broad value of the study as indicative of climatic conditions.

The following statement of the distribution of forest cover in this area has been contributed by Mr. T. D. Woodbury, Assistant District Forester of California:

"While soil and light are important requisites, tree growth is dependent to a greater degree upon a fixed minimum average annual precipitation than upon any other single factor. In general, where the annual precipitation is less than 20 inches, tree growth is scanty and composed of dwarfed species which have little commercial value. An annual precipitation of over 20 inches generally results in a commercial forest cover, while the heaviest and most valuable forests in the world,—the redwood forests of the northern California coast region,—are found where the minimum precipitation is greatly in excess of this amount.

"From the above statement the deduction may be made that any factor which affects precipitation or soil moisture brings about a corresponding change in the density and composition of the forest cover. For example, northerly and easterly slopes are less exposed to the sun's rays than southerly or westerly, therefore, the soil and air moisture content is greater in such situations, and in protected gulches and canyons. For this reason we find on these slopes the heaviest stands of the most valuable species.

"While trees, like other forms of vegetation, prefer a rich sandy loam soil, on the whole the character of the soil has far less bearing upon the determination of and character and amount of forest cover than precipitation. Fairly well drained soils of so rocky a character as to be absolutely without value for agriculture will produce a heavy timber crop where the rainfall is ample. Again, like other forms of vegetation, trees require a certain amount of light. Since, however, light is universally distributed, this factor has but little bearing on the determination of local forest conditions.

"So intimate is the relation between precipitation and tree growth, however, that with information at hand regarding the precipitation in a given region, the character of the forest may be determined with a fair degree of accuracy. Conversely the amount and character of forest cover serves as an indication of the amount of precipitation where other records are lacking.

“Bearing in mind the above statement of general principles and referring to the timber map of the Pit River drainage basin on Plate 3, we should expect to find the heaviest and choicest stands indicative of the areas of heaviest precipitation. The heavily timbered strip between Mt. Shasta and Mt. Lassen, denoted in the larger green dots on the map, is located along the divide between the Sacramento and Pit River drainage areas. This strip intercepts storms from the Pacific Ocean and the precipitation there varies from about 40 inches on the western border to 24 inches on the eastern. The great bulk of this belt below 6,000 feet elevation is made up of forests composed of sugar and yellow pine (*Pinus lambertiana* and *Pinus ponderosa*) with white fir (*Abies concolor*) and incense cedar (*Libocedrus decurrens*) in mixture.

“These species make up the most valuable commercial type in the California Sierras and the one in which the large pine lumbering operations of this State are being carried on. Within this type sugar pine and white fir are particularly dependent on moisture and therefore occur on the northerly and easterly slopes or in the most favored and protected situations, as would be expected, leaving the less desirable localities in the possession of the yellow pine and scattered cedar. In certain fairly favorable situations all of these species occur together in a mixed stand, the composition of which varies considerably with changes in slope, exposure and moisture conditions. The presence of any considerable percentage of sugar pine in the mixture, however, is always indicative of favorable moisture conditions.

“Within the belt between 6,000 and 8,000 feet where the effect of altitude and exposure counteract somewhat the abundant moisture, the timber type consists of lodgepole pine (*Pinus contorta*) and California red fir (*Abies magnifica*). On this account the forest at the highest elevations is not as dense or as valuable as that at moderate altitudes.

“Within the great comparatively level belt of country which extends eastward from this area of heavy timber to the Warner Mountains on the eastern border of this drainage basin, precipitation decreases from west to east. In the western portion of the area the annual precipitation averages about 20 to 24 inches, while in the eastern and southeastern portion it amounts to only 14 inches. This decrease in the annual supply of moisture is directly reflected in the character and composition of the forest cover. On large areas of the poorer rocky soils situated between 4,200 and 5,000 feet elevation within this intermediate area the juniper type has taken possession because of its ability to withstand drought. Where precipitation increases slightly on account of some local change in conditions or where more soil moisture is available, as on northerly and easterly slopes or on protected gulches, light stands of pure yellow pine are found. In still more moist situations cedar and fir occur in mixture with yellow pine, and in a few favored localities,

such as Big Valley Mountain and Happy Camp Mountain, where exposure and soil conditions are most favorable, the forest is made up of a mixed type containing sugar pine as well as yellow pine, white fir and cedar.

"When the Warner Mountains are reached precipitation again increases with elevation and we find the same forest law governing the composition and density of the stand. In ascending this range a belt of juniper is first encountered, then pure yellow pine on the south and west slopes. Still higher up between 5,500 and 7,500 feet elevation the heaviest stands occur. These contain varying proportions of white fir and incense cedar, in addition to the yellow pine, and are found at their best on north and east slopes. Between 7,500 and 9,000 feet elevation the effect of exposure and altitude is again felt and the forest reverts to a mixture of rather unimportant abnormally formed trees, or the mountains are so rocky that there is no tree growth.

"This brief description of timber conditions within this drainage basin is intended simply to elucidate the map and to make clear the relative watershed value of the various portions of the drainage area as indicated by the character of the cover."

### PRECIPITATION.

The following tabulations give all available and pertinent data from the records of the United States Weather Bureau within the basin:

Monthly Precipitation, in inches, at Alturas, Modoc County, California.  
Elevation 4,400 feet.

\*Abandoned May 1, 1914.

To enable a thorough understanding of general conditions of precipitation in the basin to be had, with the greatest facility, a special map, Plate 4, has been prepared. The local intensity of precipitation is brought out by the depth of hatching on the map. The isohyetose lines also give in greater detail the distribution of snow and rainfall. All of this work has been based primarily on such records as exist of average annual precipitation at points within and in the vicinity of the basin. The map has been supplemented by a smaller scale map, Plate 5, which shows in relief the entire topography of Northern California and the relation of precipitation in the basin with that in the larger territory. A careful examination and comparison of these two sheets is essential for a full grasp of conditions.

In preparing Plate 4 the basis of the sheet was the United States Weather Bureau stations indicated by circle. This data was supplemented by consideration of the forest cover previously discussed and shown on Plate 3. Important additional data was obtained by personal narrative and descriptions of men intimately acquainted with the country, such as county surveyors, forestry men, cattle men and others.

In preparing Plate 5 the records of the United States Weather Bureau have of course been the basis. To a certain extent older maps showing precipitation in this region have been used, and all available data prepared by engineers for public and private interests have been utilized. The influence of topography and exposure, as summarized herein in the section entitled "Relation between Topographic Features and Precipitation in Northern California" in an article written by G. H. Willson, District Forecaster for the Weather Bureau in California, and also the influence of the high range extending from Lassen Peak to Mt. Shasta, as indicated by an average annual precipitation of about 52 inches at McCloud and 45 inches at Montgomery Creek, were given special consideration in preparing Plate 5. This study has resulted in assuming heavier precipitation on the Warner Range than had previously been estimated, due to unmistakable evidence such as snowfall, run-off and forest cover, which indicate a maximum of fully 30 inches near the higher elevations. It will also be observed that the precipitation on the north coast of California is excessively heavy, and that it rapidly decreases from west to east, except as locally influenced by mountain ranges.

## **RELATION BETWEEN TOPOGRAPHIC FEATURES AND PRECIPITATION IN NORTHERN CALIFORNIA.**

In order to better illustrate the variation in precipitation from west to east and show how relatively small is the amount east of the Cascades, a cross section of Northern California from Humboldt Light House on the ocean to Cedarville east of the Warners, is given,

Plate 6, on which also the average annual precipitation at various points is shown. This section passes through Eureka, Weaverville, Shasta, Redding, Montgomery Creek, Burney and Alturas, and likewise crosses most of the important valleys and all the mountain ranges at about their average elevation.

Mr. G. H. Willson, of the United States Weather Bureau, in discussing the influence of elevation on rainfall in California, makes the following statements: "Generally speaking, precipitation increases rapidly with elevation, but the differences found in the amounts of precipitation measured at places in the same vicinity, and at the same elevation, plainly indicate that there are other important factors besides elevation to be considered.

"The rainfall chart of Northern California gives a good general idea of the distribution of precipitation and shows a close relationship between it and the topography of the State; also that the greatest amounts are found in the foothill and mountain districts.

"In this study of the relation of rainfall to elevation in Northern California a study of diagrams (not published) for places having the same latitude quite clearly illustrates the following general facts:

1st. "The rainfall on the immediate coast is less than it is short distance inland

2d. "The western slopes of the mountains have more rain than the eastern at the same elevation.

3d. "At the eastern base of the mountain ranges the rainfall is less than it is further east in the valleys. (This condition is not pertinent to the Pit River basin)

4th. "On the western slopes of the mountain ranges the rainfall is greatest where the mountains are steepest. The greatest precipitation is not on the summit of the Sierras, but somewhat lower, on the slope facing the rain bearing winds (generally western).

"From the above it will be noted that those places most exposed to the rain bearing (south to west) winds of the Pacific, other factors being equal, receive the greatest rainfall, that the winds do not give up their moisture readily in passing over the ocean and immediate coast, where the land is low, but retain it until forced upward over the hills and mountains. Those slopes of the hills and mountains upon which the rain bearing winds impinge and are forced over receive the greatest precipitation. Any rapid upward deflection of the atmosphere cools and greatly lessens its capacity for holding moisture. Consequently where rain bearing winds are forced over the steep mountains they deposit most of their vapor in ascending, and descend on the leeward side of the range comparatively dry."

The effectiveness of mountain masses in causing increased precipitation on their windward or westerly slopes and in reducing the amount on their leeward or easterly slopes is well illustrated on Plate 6. At sea level on the Humboldt Coast the precipitation is 38 inches, on the higher westerly slopes of the Coast Range it exceeds 60 inches. At Redding it is about 38 inches, while at Montgomery Creek, some 1,600 to 1,700 feet higher, the amount is 45 inches. On passing over the Cascades from Montgomery Creek to Burney, the precipitation reduces from 45 to 30 inches, notwithstanding the 1,100 feet greater elevation at Burney than at Montgomery Creek.

In connection with the Pit River Basin one of the most striking changes in precipitation conditions occurs in passing from west to east of Big Valley Mountain. At the west, in Fall River Valley, the annual precipitation is apparently about 20 to 24 inches; at the east of the range in Big Valley it is about 13 inches, as indicated by a short record at Lookout and the Alturas records. In contrast with this decrease in rainfall the territory east of Big Valley Mountain averages about 1,000 feet higher in elevation than that to the west. Sheffer Mountain, between Big Valley and Alturas, does not exert a pronounced influence on precipitation. The storms appear to rise over the long sloping spurs that extend to the west with little effect on the areas to the east, and with only a moderate increase in precipitation on the westerly slopes of this mountain.

The average of a ten-year record at Alturas is 13 inches. On the higher slopes of the Warners the annual depth undoubtedly amounts to a minimum of 24 to over 30 inches. The large increase over the Warners is probably due to the very abrupt face which these mountains expose to eastward moving storms as well as their elevation. Cedarville, at the easterly base of this range, has an average of about 14 inches, the increase of an inch over Alturas being due, no doubt, to the proximity of this place to the crest of the mountains and the local influence of a comparatively low open gap in the mountain range due east of this town. That such depth of rainfall does not extend far from the Warner range easterly into Nevada is quite evident from the barren desert conditions that prevail within ten to twenty miles of the crest of the Warners. It is probable that the average precipitation is considerably less than 10 inches over the areas to the east of this mountain range.

### **ZONE OF HEAVY PRECIPITATION EASTERLY FROM MOUNT SHASTA.**

There appears to be a quite pronounced zone of relatively heavy precipitation extending from the south side of Shasta on the west through the gap between Big Valley Mountain and Glass Mountain and finally

passing to the north and east of Goose Lake. This zone is generally marked by the heavy forest growth and greater depth of snow. Its cause is probably due to the deflection of air currents by topography.

### **ARIDITY, THE PREDOMINATING FEATURE EAST OF THE CASCADES.**

The predominating feature of precipitation conditions over the greater part of the Pit River Basin east of the Cascades, and particularly over the valley or agricultural areas, is its small amount. West of Big Valley Mountain, in Fall River, Hat Creek and Burney Valleys, the amount is 20 to 24 inches with probably 24 to 30 inches near the head of Hat Creek Valley. East of Big Valley Mountain, in Big Valley, Warm Springs Valley and in North and South Fork Valleys the average does not exceed 13 to 14 inches. As most of this precipitation occurs during the winter months, principally as snow, the entire region is relatively arid, with conditions of aridity particularly pronounced east of Big Valley Mountain.

### **CLIMATIC FEATURES.**

Contributed by G. H. Willson, District Forecaster, San Francisco. "Climatically, the northeastern portion of California, especially the Pit River drainage area, is entirely different from the portion of the State west of the mountains (Cascades). The chief characteristics are a scarcity of rainfall, an abundance of sunshine, wide range of temperature and rapid evaporation. The topography is varied and marked differences in both temperature and rainfall prevail at places but a few miles apart. A marked feature during the late spring, summer and early fall is the warm days and cool nights; and although afternoon temperatures often exceed 100 degrees, they cause no great inconvenience. During cold periods in the winter the minimum temperature often falls below zero.

The precipitation is generally confined to the winter months, although thunder showers are not infrequent in the late summer, but they can not be depended upon for crop growth."

### **TEMPERATURES.**

The following tables of records at Alturas and Burney give mean, maximum, and minimum monthly temperatures at these points and record of killing frosts at Alturas.

Monthly Temperatures, in Degrees Fahrenheit, at Alturas, Modoc County, California.  
Elevation 4,400 feet.

**Frosts.** Killing frosts at Alturas. The following notes are taken from the annual weather reports of California :

	Last in spring	First in autumn
1905 -----	May 21 -----	August 28 -----
1906 -----	May 16 -----	September 11 -----
1907 -----	June 16 -----	August 10 -----
1908 -----	June 22 -----	August 26 -----
1909 -----	May 24 -----	August 24 -----
1910 -----	June 8 -----	August 29 -----
1911 -----	Every month of the year in the mountains.	
1912 -----	Every month of the year in the mountains.	
1913 -----	Every month of the year in the mountains.	
1914 -----	Nearly every month of the year in the high mountains.	

From this record it appears that killing frosts are liable to occur every month in the year, although less prevalent from the middle of June to the middle of August.

These frost conditions must not, however, be considered as abnormal. In practically all the higher plateau and mountain regions such conditions prevail. Elevated valleys like the Klamath, the Deschutes, the Carson and other well known agricultural regions in the Pacific States suffer to a greater or less extent from summer frosts. Agricultural losses by these summer frosts are confined almost wholly to the tenderer vegetables and fruits. Staple crops like fodders and grains are rarely affected. In the more sheltered and best located areas of these elevated plateau lands the effect of frost is hardly appreciable and plants of great variety and delicacy can be successfully raised.

---

## RUN-OFF.

---

### GENERAL.

Of the precipitation which falls on any area a part is lost by direct evaporation into the atmosphere. The remainder may flow off in surface streams, or sink into the ground, or both. Evaporation is most pronounced from all water surfaces and from wet and swampy lands. Surface streams may later be converted into underground supplies and conversely underground supplies may later issue to the surface as springs.

### CLASSIFICATION OF CATCHMENT AREA.

**General.** The basin is structurally volcanic as described in the section on Geology. Different localities, however, differ very markedly in structural conditions affecting run-off. A map of the basin showing localities where widely differing conditions of run-off prevail is given on Plate 7.

A large portion of the basin includes elevated mountain masses, to a certain extent porous and capable of considerable underground storage, from which issue numerous perennial springs. The mountain slopes are, however, mostly steep and rapidly shed such surface waters as are not at once absorbed by the substrata. This portion of the basin is undoubtedly by far the most fruitful in yield, due mainly to the heavy precipitation, the result of elevation and exposure already referred to, and to the relatively small evaporation and absorption losses. Portions of the basin of this type are shown on Plate 7 by cross hatched lines, and are for convenience referred to as the "mountain areas."

The portion of the basin next to be considered is the shattered and porous lava zone or belt extending between Shasta and Tule lakes on the north down to and including the Lassen territory on the south. This area is almost unique in the fact that, in spite of the comparatively heavy precipitation it receives, its surface sheds practically nothing into the water courses or channels, all run-off being confined to springs, many of which may justly be termed underground rivers. This part of the basin is shown on Plate 7 by plain hatched lines, and is referred to hereafter as the "porous lava areas."

The remainder of the basin is shown on Plate 7 by dashes, and consists mainly of rolling plateaus and benches capped almost entirely with adobe soil from 2 to 5 feet in thickness. Much of this is heavily timbered but mainly it has sage and scattering juniper growth. The surface soil is also to a large extent covered with angular basaltic fragments or float rock, as it is locally termed. This adobe soil is markedly retentive of moisture when the latter is not in excessive quantity. Precipitation, as already stated, is scanty and usually occurs in a manner that permits its gradual absorption and retention in the surface soil where it is held until evaporated. The result is that practically no surface run-off occurs from areas of this class, save during or after storms of exceptional severity or duration when the absorptive capacity of the soil is overtaxed, nor is there any appreciable accretion to the underground supply as evidenced by the almost total lack of springs in this territory. In short, these areas are the least fruitful in run-off of any in the basin. For convenience these areas are referred to as the "plateau areas."

**Mountain Areas.** The streams draining the mountain areas referred to above derive a very large proportion of their supply from substantial perennial springs issuing from the lower mountain slopes. In spring-time, however, the proportion of surface accretions is heavy and floods of magnitude frequently occur, but the period of surface discharge is short. The discharge of the streams, however, generally indicates a fairly heavy absorption and storage by the substrata. The ratio of total run-off of these streams in very dry years to that of very wet years is probably in no instance greater than 1 to 2.5. On South Fork of Pit River at Jess Valley the ratio for 1903-04, an excessively wet year, to 1904-05, a comparatively dry year, was about 1 to 15. On Ash Creek at Adin the ratio for the same years probably was 1 to 2. On the McCloud the maximum variation to date is 2,400,000 acre feet in 1903-4 to 1,260,000 acre feet in 1911-12, or slightly less than 1 to 2. The large flood run-off on this river is caused at times by warm rains in winter and spring that extend up to elevations of 4,000 feet or more.

While these streams are not regulated by underground storage to the extent of Fall River and Hat Creek, their supply is dependable. The

BURNEY FALLS ON BURNEY CREEK.

chief streams of this type are the creeks which feed South Fork from West and Jess valleys, Ash Creek, Willow Creek, Horse Creek, Beaver Creek—all east of Fall River and Hat Creek—practically all the small creeks which enter the Pit below Burney Creek and McCloud River. Burney Creek might also be included in this classification, as its flow is regulated only below Burney Valley, into which the drainage from the mountains at the south ordinarily sinks, issuing later from large springs at Burney Falls.

As the precipitation on the mountain area, so-called, east of the Cascades varies from 18 to 30 inches and from 30 to 60 inches in the Cascades, the stream flows are not only well sustained but also of relatively large amount.

**Porous Lava Areas.** Fall River and Hat Creek are the most conspicuous examples of streams fed entirely by spring flow. The report on Iron Canyon project in reference to streams in this area states: "The aggregate contributions from springs entering Pit River, from all sources above its junction with McCloud River, is about 2,500 second feet, possibly a unique instance of sustained and dependable underground water supply.

"The source of the large Fall River springs is difficult to determine. Surface topography is of little value as a guide in delimiting the catchment area." That the actual drainage area is greater than the area indicated by surface topography, which is only about 600 square miles, or approximately 400,000 acres, is clear from the following: The average precipitation over this area is about 24 inches per year, or an aggregate of about 800,000 acre feet, while the discharge from the Fall River springs amounts to upward of 1,000,000 acre feet. When it is realized that frequently not over from one-third to one-half of the precipitation even under favorable conditions appears as stream flow, a better understanding of the true drainage area of Fall River can be had. Instead of being only 600 square miles, as indicated by surface topography, the area probably amounts to from 1,500 to 2,000 square miles, or roughly about three times what surface topography indicates. Substantial corroboration of large drainage to the Fall River basin is evidenced by the fact that the surface drainage of a large area west and north of Happy Camp flows west to the porous lavas and sinks, that Butte and Antelope creeks at the northeast of Mount Shasta sink, and that large seepage losses are known to occur along the south shore of Tule Lake. The report on Iron Canyon project states that "In 1908 and 1909 the Reclamation Service excavated two or three galleries into lava beds at the south shore of Tule Lake and connected with the lake by channels that permitted lake water to flow into them. For many months a constant discharge of about 30 second feet from the lake

entered these galleries and was absorbed by the lava formation, only terminating by the subsidence of the lake level below the level of the galleries.

All indications along the south shore of Tule Lake, and even of Clear Lake east of Tule Lake, point to an extremely porous structure and to general sub-surface flows in a southerly direction. South of these lakes the lava beds rise to the summit of Glass Mountain, an elevation of about 8,000 feet. Due to elevation and location, precipitation at this point is very considerable and the mountain carries snow practically all of the year. In spite of this there are no surface streams at any time of the year in the territory southeast of Tule Lake and around and including Glass Mountain. It is probable, therefore, that a large portion of the northeastern and eastern drainage of Shasta and territory within the valleys of Butte Creek, Lower Klamath Lake and Tule Lake as well as territory immediately north of the Fall River springs contributes to this great underground flow.

These immense volcanic deposits constitute in themselves a subterranean reservoir from which issue the Fall River springs. The spring flow is almost constant at all seasons and years, indicating unmistakably a vast storage which alone could equalize the natural fluctuations in accretions to the underground water supply. The Fall River springs, although extending along a front of several miles, issue at practically the same elevation without pressure and in a manner to forcibly impress one with the conviction that they act merely as a spillway from some great underground reservoir which probably reaches for many miles, possibly for many dozen miles, northerly from the springs under the lava beds of Glass Mountain."

**Plateau Areas.** These areas consist generally of broad, flat, or slightly rolling lava flows overlaid with a mantle of 2 to 5 feet of adobe, with the surface very generally covered with loose angular lava fragments varying from a few inches to a foot or more in size. The only vegetation over the greater part of these areas is a light growth of grass, sage brush and scattering juniper, all indicative of scanty precipitation. Such names as the "Devil's Garden" and "Rocky Prairie" have aptly been given to portions of the plateau. Northwest of Canby there is a zone of relatively high precipitation referred to in the preceding section entitled, "Zone of Heavy Precipitation Easterly from Mt. Shasta." This supports a fair stand of timber, but its soil conditions do not differ materially from other bench areas. The average precipitation over the plateau varies generally from 14 to 18 inches, most of which falls as snow during winter. The larger part of this precipitation is readily absorbed and held by the adobe capping, resulting in a very saturated condition of soil that frequently obtains during winter and early spring.

After the point of saturation is reached additional precipitation or melted snow yields some small surface run-off. There is no evidence to indicate that percolating waters pass entirely through the adobe mantle in any appreciable quantity. In fact the absence of spring flow around the base of the adobe capped plateau areas is quite conclusive that the adobe, while having great retentive capacity, effectively prevents penetration to the underlying lavas.

With an annual evaporation rate over these areas of about three feet in depth, and an average precipitation of less than one-half that amount, it may be concluded with practical certainty that under ordinary conditions the greater part of the precipitation, probably upwards of three-quarters, is held by the soil until evaporated. In years of heavy snow-fall followed by wind and high temperatures or rain-fall conditions tending to very rapid melting of the snow, excessive run-off results, sometimes causing short-lived but severe floods in the Pit valleys.

As illustrating the above, Willow Creek drains about 550 square miles above the outlet of Clear Lake Reservoir. All of this territory may be classed as plateau area. It includes a part of the zone of relatively high precipitation previously referred to. Indications are that the average annual precipitation is about 18 inches, the amount differing from season to season. Records of run-off for 1905 to 1914 as measured by the U. S. Reclamation Service at Clear Lake show an average yield of 130,000 acre feet, equal to 4.4 inches depth on the drainage area, or about 25 per cent of the precipitation. This yield fluctuated between 1.2 inches in 1908, and 8.6 inches in 1907.

It is to be noted that both the precipitation and run-off on the Willow Creek drainage area as indicated by forest cover, elevation and slope are probably greater than on most of the plateau areas of the Pit, the average annual run-off of the latter probably ranging from 3 to 4 inches in depth of the tributary watershed, and in dry years not over 1 inch may be expected. Such dry years may be looked for about one year in five.

### **STREAM FLOW DATA.**

**Gaging Stations** (see Plate 7). A gaging station on McCloud River has been maintained by the U. S. Geological Survey almost continuously since October, 1902. Early in 1904 stations were established at the various damsites that had been located by the Reclamation Service in the Pit River Basin, viz, on South Fork at Jess Valley, on West Valley Creek in West Valley, on the Pit at Canby and at Bieber, and on Ash Creek at Adin. These stations were maintained for about two years, except at Bieber, where measurements for about six years were taken. Subsequently the U. S. Geological Survey established stations on the

Pit at Henderson and Ydalpom, on Fall River at Fall River Mills, on Hat Creek at Hat Creek and at the Hawkins Ranch, on Rising River two miles south of Cassel, on Burney Creek above Burney, on Kosk Creek near Henderson, on Montgomery Creek at Montgomery Creek, and on Squaw Creek near Ydalpom. Likewise stations of importance to the purposes of this report were established at Drews, Cottonwood, Thomas, and Dog Creeks in the Goose Lake Basin.

Details of summarized records of stream flow as given by the U. S. Geological Survey in Water Supply Papers 298 and 331, also in advance statistics not yet published, at all points in the basin, follow. Miscellaneous measurements of streams and ditches, valuable mainly in connection with local uses of water for irrigation, are given in the chapter on "Present Appropriations and Uses of Water."

The above records are unsatisfactory in the fact that the periods over which they extend are insufficiently long to establish reliable averages. The measurements of flow of Sacramento River at Red Bluff extend however over 19 years, therefore the Pit River records have been extended and enlarged by analogy in a study of all of the flows in the region.

**Flow of Pit River at Big Valley** (quoting from the Iron Canyon Report). The flow of Pit River at Big Valley was measured during a six-year period, from 1904 to 1908, inclusive, and during 1913-14. It averaged during that period 728,750 acre feet annually, the maximum being 1,400,000 acre feet, and the minimum 187,000 acre feet. During the same period the Sacramento River at Red Bluff averaged 12,104,000 acre feet per annum, or 23 per cent more than its flow averaged during a 19-year period which included these six years. If the flow of the Pit at Big Valley for these six years be reduced 23 per cent to correspond with the correction required at Red Bluff, the average run-off of Pit River thus corrected would be 561,000 acre feet, still a very substantial amount. The character of the watershed would not, however, warrant the use of such a ratio in deducing the corrected flow. A comparison of flows on the Sacramento at Red Bluff and the Pit at Big Valley furnishes the following data:

Season	Sacramento at Red Bluff, acre feet	Pit at Big Valley, acre feet	Ratio
1903-04 -----	15,900,000	1,400,000	100:8.8
1904-05 -----	10,600,000	303,000	100:2.9
1905-06 -----	11,100,000	755,000	100:6.8
1906-07 -----	13,700,000	1,110,000	100:8.0
1907-08 -----	7,720,000	187,000	100:2.4
1913-14* -----	†13,600,000	617,000	100:4.5

\*Records not complete. Portion of year estimated.

†Actual record later available shows 13,500,000 acre feet.

The annual discharge of Pit River thus ranged from 2.4 per cent to 8.8 per cent of the Sacramento flow, the lower percentages corresponding with the seasons of lower flow at Red Bluff. This is as would be expected, because the steady perennial flows of the Sacramento and Pit—derived from deep-seated springs which in dry years constitute so large a proportion of the entire discharge—have their source down stream from Big Valley. The watershed of Pit River tributary to Big Valley, as determined by surface contours, is 4,040\* square miles and of the Sacramento at Red Bluff 10,400\* square miles, the ratio being about 10:4\* while the ratio of run-off runs between 10:0.8 and less. The watershed of the Pit tributary to Big Valley is, as before stated, mainly of volcanic origin, and except for the higher mountain areas is arid in character. In dry years the late summer flows of the Pit at Big Valley wholly fail or are entirely used for irrigation in that valley. Under such conditions it is plain the proportionate contribution of Pit River above Big Valley to the entire flow of the Sacramento at Red Bluff would during dry years be very much less than during wet years, when the surface run-off from rains or melting snows on the great watershed above Big Valley would enter the Pit and its tributaries in appreciable volume. The recorded variation in the ratio of discharges from 2.4 per cent to 8.8 per cent appears, therefore, consistent and reasonable under the natural conditions known to exist. A curve of ratios between annual discharges at Red Bluff and Big Valley has therefore been constructed for application to the years when the run-off of the former was known but the latter was not, in order that a correction based on known conditions could be applied to the Red Bluff records to establish reasonable estimates of Big Valley flows during the years for which no records exist. The ratio between Red Bluff and Big Valley flows has been taken as follows:

	Acre feet	Percentage of discharge originating in Pit River above Big Valley
Annual discharge at Red Bluff.....	5,000,000	1.2
Annual discharge at Red Bluff.....	6,000,000	1.5
Annual discharge at Red Bluff.....	7,000,000	1.8
Annual discharge at Red Bluff.....	8,000,000	2.3
Annual discharge at Red Bluff.....	9,000,000	2.8
Annual discharge at Red Bluff.....	10,000,000	3.5
Annual discharge at Red Bluff.....	11,000,000	4.1
Annual discharge at Red Bluff.....	12,000,000	5.0
Annual discharge at Red Bluff.....	13,000,000	6.0
Annual discharge at Red Bluff.....	14,000,000	7.0
Annual discharge at Red Bluff.....	15,000,000	8.6
Annual discharge at Red Bluff.....	16,000,000	9.0

\*NOTE.—These figures include Goose Lake drainage area. If these are excluded the areas will be 2,950 and 9,300 square miles, respectively, and the ratio will be 10:3.

By applying the above percentages to all years on record at Red Bluff we obtain the following estimates of discharges at Big Valley.

Season	Flow at Red Bluff, acre feet	Percentage correction to apply	Estimated discharge of Pit River at Bieber, acre feet
1895-96 -----	10,200,000	3.6	*367,000
1896-97 -----	10,200,000	3.6	*367,000
1897-98 -----	4,960,000	1.2	*60,500
1898-99 -----	5,800,000	1.5	*87,000
1899-1900 -----	8,530,000	2.5	*213,000
1900-01 -----	8,840,000	2.7	*239,000
1901-02 -----	11,300,000	4.4	*497,000
1902-03 -----	9,760,000	3.2	*302,000
1903-04 -----	15,900,000	8.8	†1,400,000
1904-05 -----	10,600,000	2.9	‡303,000
1905-06 -----	11,100,000	6.8	‡755,000
1906-07 -----	13,700,000	8.0	‡1,110,000
1907-08 -----	7,720,000	2.4	‡187,000
1908-09 -----	13,400,000	6.4	*858,000
1909-10 -----	8,910,000	2.7	*241,000

1911-12 -----	6,370,000	1.6	*102,000
1912-13 -----	6,430,000	1.6	*103,000
1913-14 -----	13,600,000	4.5	‡617,000
Average 19 years <sup>1</sup> -----	9,860,000	4.4	429,000

\* Estimate.

† Actual record.

‡ Mostly actual record.

<sup>1</sup>NOTE.—There is an error in the above record for 1895-96, and some little additional data has been obtained, but these do not materially affect the above.

The above table of flows of the Pit at Big Valley taken in conjunction with the known local peculiarities of the catchment area, emphasizes and explains the flashy character of the stream flow above the junction with Fall River, and its liability to drouth. This part of the watershed contains vast tracts of the plateau area previously referred to, which furnish minimum yields in normal seasons, and in wet seasons readily shed the surplus.

Thus during a year of normal flow on the Sacramento, with a discharge of about 10,000,000 acre feet at Red Bluff, the Pit at Bieber only discharges about 3.4 per cent of this, or about 340,000 acre feet, an amount only about three quarters of its average flow, while in wet seasons like 1904, when the Sacramento only exceeded its normal flow by about 60 per cent, the Pit exceeded its normal by about 200 per cent. Again in a year like 1898, when the Sacramento had a yield of about 50 per cent of its normal, the Pit apparently only furnished about 14 per cent of its normal.

**Pit River near Canby, California.**

*Location*—One-half mile above Warm Springs Valley damsite, at highway bridge, three and one-half miles southwest of Canby.

*Records available*—January 1, 1904, to December 31, 1905.

*Drainage area*—About 1,500 square miles.

*Diversions*—Water diverted from main stream and tributaries, above the station, for irrigation.

*Accuracy*—Fair.

**Monthly Discharge of Pit River near Canby, California.**

(Drainage area 1,500 square miles.)

<sup>1</sup>Partly estimated.

**Pit River at Henderson, California.**

*Location*—At Big Bend Ferry, one-fourth mile above Henderson post office, in Sec. 36, T. 37 N., R. 1 W. Nelson Creek enters half a mile above and Kosk Creek one mile below the station.

*Records available*—September 28, 1910, to September 30, 1914.

*Drainage area*—Not measured.

*Gage*—Vertical staff on an alder tree on left bank about 100 feet above ferry.

*Channel*—Small boulders and coarse gravel; fairly permanent.

*Discharge measurements*—Made from car and cable 80 feet below gage.

*Accuracy*—Sufficient discharge measurements have not been made to define the rating curve at medium and high stages.

**Monthly Discharge of Pit River at Henderson, California.**

## Pit River near Ydalpom, California.

*Location*—At Silverthorne Ferry, in the N.W.  $\frac{1}{4}$  Sec. 32, T. 34 N., R. 3 W.,  $1\frac{1}{2}$  miles southwest of Ydalpom and  $7\frac{1}{2}$  miles above junction with Sacramento River. Squaw Creek enters half a mile above and McCloud River 4 miles below the station.

*Records available*—November 16, 1910, to September 30, 1914.

*Drainage area*—6,350 square miles.\*

*Gage*—Vertical staff on an ash tree on left bank 350 feet below ferry.

*Channel*—Gravel and sand, and appears permanent.

*Discharge measurements*—Made from car and cable 50 feet above ferry cable.

*Diversion*—Water is diverted from the main stream and tributaries, above the station, for irrigation.

*Accuracy*—Rating curve well defined and results are good.

\*As given in W. S. Paper 331, including Goose Lake Basin. Should be reduced to 1,250 square miles.

**South Fork of Pit River near Ivy, California.**

*Location*—Near Jess Valley damsite, in Sec. 10, T. 39 N., R. 11 E., about 12 miles east of Likely.

*Records available*—January 11, 1904, to November 15, 1905.

*Drainage area*—91 square miles.

*Diversion*—Water is diverted from the tributaries above for irrigation.

*Accuracy*—Poor.

**Monthly Discharge of South Fork of Pit River near Ivy, California.**

	Discharge in second-feet		Run-off

<sup>1</sup>Mean of 21 days. Assumed as mean for entire month.

NOTE—These values were obtained by interpolation between discharge measurements and by hydrograph comparison with other Pit River stations. They are only an approximate estimate of the monthly flow and should be used with caution.

**West Valley Creek near Likely, California.**

*Location*—At West Valley damsite, near outlet of West Valley, about two miles above junction with South Fork, and seven miles east of Likely.

*Records available*—January 11, 1904, to December 31, 1905.

*Diversions*—Water diverted above for irrigation.

*Accuracy*—Poor gage read one to five times a month.

**Monthly Discharge of West Valley Creek near Likely, California.**

<sup>1</sup>The gage heights recorded in 1904 were unreliable and have not been republished. Monthly estimates of flow for 1904 are based on the discharge measurements and are only approximate. They should be used with caution.

<sup>2</sup>Monthly estimates for 1905 are better than for 1904. Accuracy value for 1905 may be classed as follows: January to August, B; September and October, C; November and December, D.

**Ash Creek at Adin, California.**

*Location*—Near Round Valley damsite at Adin.

*Records available*—March 13, 1904, to December 31, 1905.

*Drainage area*—260 square miles.

*Diversions*—Water diverted above for irrigation.

*Accuracy*—Fair.

**Monthly Discharge of Ash Creek at Adin, California.**

(Drainage area 260 square miles.)

**Hat Creek at Hat Creek, California.**

*Location*—At private highway bridge on Morris Ranch, in the Lassen National Forest, in the S.E.¼ Sec. 10, T. 34 N., R. 4 E., M.D.M., 1 mile north of Hat Creek post office. (Post office moved during 1912.)

*Records available*—September 22, 1910, to September 30, 1912.

*Drainage area*—Not measured.

*Gage*—Vertical staff fastened to downstream end of right abutment of bridge.

*Channel*—Gravel and small boulders; apparently permanent.

*Discharge measurements*—Made from downstream side of bridge.

*Diversions*—On account of the diversions for irrigation above the station this record does not show the natural run-off from the drainage basin. On May 13, 1911, the nine ditches were diverting a total of 110 second feet. Of this amount, it was estimated that 55 second-feet was returned to the stream above the gage.

*Accuracy*—Rating curve fairly well defined; results fair.

*Cooperation*—Gage-height record furnished by U. S. Forest Service.

**Monthly Discharge of Hat Creek at Hat Creek, California.**

**Rising River near Cassel, California.**

*Location*—At highway bridge in Sec. 8, T. 35 N., R. 4 E., about half a mile above junction with Hat Creek and  $1\frac{1}{2}$  miles south of Cassel.

*Records available*—August 15, 1911, to September 30, 1913.

*Drainage area*—Not measured.

*Gage*—Vertical staff on downstream side of bridge pier near left bank.

*Channel*—Sand and gravel and is fairly permanent.

*Discharge measurements*—Made from upstream side of bridge.

*Accuracy*—Results are excellent. This stream, which is only about 2 miles long, is fed by springs, and its flow is very constant.

**Monthly Discharge of Rising River near Cassel, California.**

<sup>1</sup>Estimated on basis of measurement, September 15, 1913. Gage height 1.28 feet; discharge 335 second-feet.

**Burney Creek near Burney, California.**

*Location*—At highway bridge three-fourths of a mile southwest of Burney, in the S.W.  $\frac{1}{4}$  Sec. 19, T. 35 N., R. 3 E., 3 miles above Goose Creek and 10 miles above junction with Pit River.

*Records available*—August 14, 1911, to September 30, 1912.

*Drainage area*—Not measured.

*Gage*—Vertical staff on upstream end of center pier of bridge.

*Channel*—Gravel and sand; probably permanent.

*Discharge measurements*—From bridge except at low water, when measurements are made by wading.

*Diversions*—Two miles above the station about 2 second-feet are diverted for irrigation during the summer months, and about 0.5 second-feet during the remainder of the year.

*Accuracy*—Rating curve fairly well defined; results fair.

**Kosk Creek near Henderson, California.**

*Location*—Above bridge in Sec. 12, T. 37 N., R. 1. W., on the Holm Ranch, 4 miles north of Henderson, in Shasta National Forest, and  $3\frac{1}{2}$  miles above the mouth of the creek. Baker Creek enters about one-fourth mile below the station.

*Records available*—October 1, 1910, to September 30, 1913.

*Drainage area*—51.9 square miles.

*Gage*—Vertical staff on an alder tree on left bank 100 feet above bridge.

*Channel*—Gravel and small boulders; fairly permanent.

*Discharge measurements*—Made from bridge or by wading.

*Accuracy*—Results are good.

*Cooperation*—Gage-height record furnished by U. S. Forest Service.

**Montgomery Creek at Montgomery Creek, California.**

*Location*—At highway bridge in Sec. 36, T. 35 N., R. 1 W., about one-fourth mile south of Montgomery Creek post office, and 2 miles above junction with Pit River.

*Records available*—August 11, 1911, to September 30, 1913.

*Drainage area*—Not measured.

*Gage*—Vertical staff on a large alder tree on left bank 70 feet below the bridge.

*Channel*—Small boulders and gravel and is rough.

*Discharge measurements*—Made from highway bridge or by wading.

*Diversions*—About 5 miles above the station the Terry Lumber Company diverts water from this stream into Little Cow Creek. During the logging season, from June to December, this diversion is from 8 to 10 second feet. For the remainder of the year the amount is reduced to about 6 second feet.

*Accuracy*—High water rating curve not well defined; otherwise the records are excellent.

**Squaw Creek near Ydalpom, California.**

*Location*—At the highway bridge in Sec. 29, T. 34 N., R. 3 W., three-fourths of a mile southwest of Ydalpom (Copper City), and three-fourths of a mile above junction with Pit River.

*Records available*—October 4, 1911, to September 30, 1913.

*Drainage area*—Not measured.

*Gage*—Vertical staff on downstream end of right pier of bridge.

*Channel*—Gravel and cobblestones; will probably shift slightly at high stages.

*Discharge measurements*—Made from the bridge or by wading.

*Diversions*—One small ditch diverts water for irrigation above the station.

*Accuracy*—High-water rating curve not well defined; otherwise the record is excellent.

**McCloud River near Gregory, California.**

*Location*—At St. Johns Camp near Hirze Mountain, about 14 miles east of Gregory postoffice. Station is 12 to 15 miles above U. S. fishery at Baird postoffice. Station is 15 miles above the mouth of the river.

*Records available*—October, 1902, to September, 1908.

*Channel*—Straight, high banks, river bed of limestone with large gravel and boulders.

*Discharge measurements*—Made from car and cable.

**Monthly Discharge of McCloud River near Gregory, California.**

NOTE.—Station discontinued June 30, 1908. September gage heights taken on account of extreme low water conditions.

**McCloud River at Baird, California.**

*Location*—at the United States fishery at Baird, in the N.W.  $\frac{1}{4}$  Sec. 23, T. 34 N., R. 4 W., about 2 miles above junction with Pit River. Bailey Creek enters about 2,000 feet above and Johns Creek 2,000 feet below the station.

*Records available*—December 22, 1910, to September 30, 1914.

*Drainage area*—665 square miles.

*Gage*—Vertical staff fastened to an alder tree on right bank, 600 feet above the hatchery.

*Channel*—Gravel and cobblestones; permanent.

*Discharge measurements*—Made from car and cable 20 feet above gage.

*Accuracy*—Rating curve well defined; results excellent.

*Cooperation*—Gage height record furnished by G. H. Lambson, superintendent of United States fishery.

## LAND CLASSIFICATION.

---

### FORESTED AREAS.

Plate 3 shows forested areas in and in the vicinity of the drainage basin of the Pit. Much of the timbered area is mountainous and rocky and its value is almost exclusively confined to the timber products. All this area has, however, a certain value for grazing purposes, and a few areas of quite limited extent appear to have reasonable agricultural possibilities, particularly some 15,000 to 20,000 acres south of Pit River extending west of Hat Creek into Burney Valley.

### OPEN RANGE.

The open range consists almost entirely of sage and juniper areas, a large part of which are rocky. The great open plateau, the unforestod mountain slopes and to some extent agricultural areas which are not as yet cultivated are used for grazing. The timbered areas are generally of minor grazing value. When the country was first settled little feed for winter use was raised, but the experience of a few hard winters in the early '80s, during which almost all livestock perished, showed the practicable number of cattle to be limited by the supply of hay available for winter feeding. In the past few years the production of hay has overtaken the demand, and in the vicinity of Alturas, where extensive swamp areas have been reclaimed and converted into hay lands, the supply of winter feed appears to be, at least temporarily, in excess of the range capacity. This apparent condition may, however, be somewhat accentuated, due to the reduction in number of cattle resulting from the very favorable prices that have prevailed in the past few years.

Since the establishment of national forest reserves the number of cattle allowed on various portions of the forest range is kept within such limits as will prevent overstocking and destruction of pasturage. A permit is required before the range may be used and a small rental charge is assessed each applicant, the amount depending on the number of livestock and the length of season for which the permit is desired. Outside of the national forests most of the range is in public ownership; nevertheless, considerable areas are patented, especially such as contain springs. Control of such watering places no doubt tends to monopolize the public range and to restrict the number of range cattle.

Cattle are usually turned on the range in April and gathered in during the fall, generally in October. The range season depends on climatic conditions, available feed, etc. Beef cattle are usually shipped to market in the fall, although an increasing number are now fed during winter.

Hay and alfalfa lands are used for fall pasturage until the first part of December, when the snows usually begin, after which all livestock are fed. The usual practice is to feed 100 head of cattle, including calves, one ton per day. In the average winter season of about four months, one and one fourth tons of hay per animal is fed. The labor cost of feeding is about 50 cents per ton of hay. The price of wild hay usually runs from \$4.00 to \$5.00 per ton, of alfalfa from \$6.00 to \$7.00.

### **BOTTOM LANDS.**

These occur generally in great, broad valleys built up by alluvial deposits of which the basic material is of volcanic origin, modified in character and deposition by the action of water, climate and vegetation.

Much of the valley soil is heavy loam or even adobe. There is a general lack of sand and gravel deposits in the entire region, although many of the soils carry a proportion of partially disintegrated rock fragments. These fragments are usually angular and not waterworn and are apparently the result of disintegration of rock *in situ* or with relatively little lateral movement. In this report frequent allusion is made to sandy or gravelly soils or the like. Attention is directed to the use of these terms as implying only that finer or coarser disintegrated rock in greater or lesser proportion is intended by the use of these terms, and not that the sandy or gravelly fragments are waterworn as is usually understood.

As a result of the effects of sorting by gravitation, the steep alluvial fans and foot slopes are built up chiefly of sandy and gravelly loams, of the kind above referred to, while the gentler slopes of the valley lands consist of loams and silty loams. Heavy clay soils occur in the flat basins, except as modified into sandy loam by stream courses. In the swamp areas of Fall River Valley, where little or no sediment is carried by the spring fed streams, extensive peat formations have resulted from vegetation.

Some of the choicest agricultural lands are the verdant meadow areas which have been built up as alluvial fans over the main valley floor. By reason of their slope and the streams which have developed them, they have both excellent drainage and abundant water supply. Such areas are found along Canyon Creek in Warm Springs Valley, Willow Creek in Big Valley and some of the small alluvial areas at the extreme south end of South Fork Valley, and at other places in the basin.

Partially indurated soils or hardpan are found in sections of all of the principal valleys in the basin. While the existence of these hard layers undoubtedly is a detriment to agriculture, it is not as yet fully determined to what extent they may be subdued by deeper tilth or by the continued use of irrigation water. The hardpan is in some local-

ities clearly indicated by the surface formation, in "hog-wallows" or the like, or by lack or scantiness of plant growth. In other localities the hardpan can only be determined by actual excavation.

The bottom lands are usually irrigated by surface flooding in spring, as described later. Any surface concentration of alkali is by this means washed away in solution. As a general rule little trouble from alkali has been experienced in this region. The principal localities where serious injury by alkali has occurred are swampy areas of very limited extent.

### **BENCH LANDS.**

These lands are mainly of the type described under the subdivision "Plateau Areas" in the chapter on "Run-off." Only a very small proportion are capable of tilth, due to the prevalence of scab and float rock and to other conditions referred to below. Such limited areas as are fairly free from rock usually have soils too shallow or too poor in quality to render the land tillable. As a result there has been practically no agricultural development of these plateaus except where certain swampy areas, found therein in natural sinks, have been reclaimed by drainage. These swamp areas, either reclaimed or unreclaimed, probably do not exceed 5,000 acres in all. They occur chiefly in and adjacent to Antelope Plains, north of Canby.

South of Pit River, opposite Fall River Valley, is an area of some 7,500 acres of agricultural land, mostly of a rolling or broken character. This area is partly tilled and dry farmed.

The bench lands west of Hat Creek, in the vicinity of Cassel, appear to be of reasonably satisfactory composition and have been so reported by the soil survey of the U. S. Forest Service. These lands are timbered and only one or two isolated tracts are farmed. The principal obstacle to agriculture will be the removal of stumps and brush.

### **IRRIGABLE LANDS.**

The location of irrigable tracts in the Pit River basin is shown on Plate 9. Such lands are considered suitable for irrigation and to have reasonable prospects of obtaining water, if not already supplied.

Of the gross areas indicated on the map, certain portions are unsuited for irrigation by reason of unsatisfactory soil or other conditions. Other lands have too broken topography or are at too great elevation above possible diversions. With general consideration of these limiting conditions an estimate of the net area of irrigable lands in the Pit River basin has been prepared. In this table the figures of the first column are inclusive of those of the second column, the latter being the areas now under irrigation as described later in detail in the chapter on "Present Appropriations and Uses of Water."

## Summary of Irrigable Lands and Portions Now Under Irrigation.

Area	Lands	
	Irrigable	Irrigated
North Fork Valley -----	2,300	2,300
Jess Valley -----	4,500	3,400
West Valley -----	1,200	1,200
South Fork Valley -----	28,000	19,000
Warm Springs Valley -----	18,000	4,000
Stone Coal Valley -----	1,000	500
Ash Creek Valley -----	5,000	4,000
Round Valley -----	3,000	1,200
Big Valley -----	33,000	15,000
Widow Valley -----	600	600
Little Hot Springs Valley -----	600	600
Dixie Valley -----	3,000	1,200
Little Valley -----	900	900
Pit River bottoms, Big Valley to Fall River Mills -----	5,000	4,000
Benches south of Pit River, Big Valley to Fall River Mills -----	5,000	600
Fall River Valley -----	25,000	6,000
Hat Creek Valley -----	7,500	3,000
Timbered lands west of Hat Creek extending into Burney Valley -----	15,000	100
Burney Valley -----	1,500	1,500
Goose Valley -----	5,000	3,500
Caton Valley -----	1,500	1,300
Scattering, on Pit and tributaries below Burney Creek -----	3,000	2,600
Plateau north of Canby -----	3,000	500
Miscellaneous small scattering areas not listed in detail -----	5,000	600
Totals -----	177,600	77,900

The entire area of the Pit basin is about 4,000,000 acres. Only about 180,000 acres, or less than 5 per cent, are irrigable, and of this irrigable area approximately 40 per cent is under some sort of irrigation. Again, as will be shown later, less than one-half of the area irrigated, or about one-fifth of the entire irrigable area, has an ample water supply. The total acreage which, on account of climate, conditions of water supply and proximity to the range appears to be most naturally adapted for raising wild hay and fall pasturage in connection with the livestock industry, totals some 25,000 to 30,000 acres, or about 15 per cent of the entire irrigable area, including mainly the mountain valleys such as Dixie, Jess and West valleys. The remaining 85 per cent of the irrigable acreage in Pit River basin, amounting to nearly 150,000 acres, is unsuited for a fairly high grade of development.

## CROPS.

---

### IRRIGATED LANDS.

Wild hay, the natural forage crop of the country, grows in those meadow and bottom lands where an abundant spring and early summer water supply is available. The quality and feeding value of the natural wild hay are largely, if not entirely, dependent on drainage conditions, the better qualities being grown on the better drained lands. On areas with improved drainage conditions, where the water level stands ordinarily several feet below ground surface, timothy, red top or clover are intermixed with the natural hay, the final stand depending on the extent to which one or more of these types may thrive at each particular locality.

Hay lands are irrigated by surface flooding, sometimes called wild flooding. About 2 acre feet per acre appears to be generally used for irrigation in the short season ending about June 20th. After harvest a light irrigation is again applied for pasturage, if a supply is available. Ordinarily temporary dams are placed in the natural stream courses or ditches to facilitate flooding the lands.

A fair crop yield is from three fourths to two tons per acre, with exceptional yield of three tons on small areas of particularly rich land. The average yield is about one to one and one half tons per acre, or about the amount necessary to feed an animal over winter. Under normal conditions hay is considered to be worth \$2.00 to \$3.00 per ton in the field before cutting. Harvesting and stacking is contracted at \$2.00 per ton, making the total cost in the stack \$4.00 to \$5.00 per ton. Pasturage, after harvesting, is worth about \$1.50 per acre, where water for irrigation is available.

Alfalfa is tending to somewhat increase in acreage on account of its greater yield and feeding value, especially for dairying purposes. This crop is generally raised on the better drained lands where the water level stands about 10 feet or more below the ground surface and where the irrigation supply is fairly dependable, its total area under cultivation, however, being quite small.

East of Big Valley Mountain, where the valleys are 4,000 to 4,500 feet elevation, and the growing season 90 to 100 days in length, two crops, with an occasional third crop, are grown. Under present conditions the yield amounts to about 3 tons per acre. After harvest the lands are irrigated for pasturage if water is available. Apparently about 2 acre feet per acre is an adequate supply for this crop, although this is somewhat uncertain.

RICH IRRIGATED MEADOW PASTURAGE NORTH FORK VALLEY.

West of Big Valley Mountain, in Fall River, Hat Creek and Burney valleys, where the valley lands are 1,000 feet lower than those to the east of Big Valley Mountain, the growing season is about six weeks longer, or approximately 140 days, between about the middle of May and the end of September. Three crops, with an occasional fourth crop, are raised. The total yield under present conditions, according to much data furnished by settlers, averages  $3\frac{1}{2}$  tons per acre. After harvest irrigation for pasturage is practiced where a supply is available. About  $2\frac{1}{2}$  acre feet per acre will give a full season supply.

Alfalfa usually sells at \$6.00 to \$7.00 per ton in the stack. Harvesting costs about \$2.00 per ton. With allowance for labor and irrigation the net returns from this crop amount to about \$12.00 per acre for lands east of Big Valley Mountain and about \$15.00 for lands west of Big Valley Mountain, or four to five times as much as wild hay. Fall pasturage on alfalfa lands sells at \$1.50 or less per acre. The investment in lands and ditches is, however, much greater for alfalfa lands and under present conditions a full season's water supply, necessary for this crop, is not generally available.

A small acreage of grain, probably not over 3,000 acres, is under irrigation, but the character of the lands and conditions are so variable that no information of average returns was obtained.

### **NON-IRRIGATED LANDS.**

Wheat and barley are the staple dry land crops, although some rye is raised. The average yield of wheat appears to be about 15 bushels per acre. The farmer ordinarily receives about one cent per pound for wheat, the gross returns therefore averaging about \$9.00 per acre. The cost of producing the crop is about \$7.00 per acre, leaving a net profit of about \$2.00 per acre. A yield of 20 bushels per acre gives a net return of \$5.00 per acre, while 10 bushels, a not infrequent crop yield under unfavorable dry farming conditions, leaves no profit. No extensive areas are devoted to the raising of fruits and vegetables. Weather and soil conditions, and particularly the former, undoubtedly limit quite sharply the areas suitable for such crops, and the variety that may be grown, to a few favorable localities such, possibly, as Little Hot Springs Valley, where an excellent variety of fruits and vegetables, including cantaloupes and tomatoes, is grown freely. Even Jess Valley, at 5,500 feet elevation, possesses gardens producing berries, cauliflower, lettuce and other tender plants.

All hay and alfalfa, and practically all wheat, are consumed in the local market. Hay is used almost entirely in connection with the live-stock industry, while alfalfa is being used to a considerable extent in connection with dairying. Local flour mills convert the grains into flour and other products for local consumption. Conditions of trans-

portation do not permit the shipping of any but finished farm products of high value such as livestock and cheese, and to a small extent flour and butter, to outside markets.

### CONTRIBUTED ARTICLES.

By **W. Abbot M. Green of Alturas.** That portion of the Pit River drainage area tributary to Big Valley may be roughly described as a plateau region, with an elevation of about 4,000 feet in its lowest parts, and having a slight slope to the southwest. It is broken by numerous mountain ranges reaching the greatest elevation on the eastern border, with intervening valleys. These mountain ranges are, for the most part, of volcanic origin. The valleys show unmistakable evidence of having been at one time mountain lakes and have evidently reached their present condition by the erosion of their outlets, and the filling of the basins with sediment from the adjacent mountains. The result is a series of almost level valleys linked together along the water courses by stretches of more or less precipitous canyons. The tillable land of the area is confined almost entirely to those valleys, the higher lands being chiefly valuable for grazing, though large areas carry valuable stands of timber.

The scant rainfall of the region, coupled with the fact that practically all the precipitation occurs during the winter months, makes irrigation necessary for the most successful farming. The available water supply, however, under the present system of distribution, is wholly inadequate for the irrigation of the entire tillable area, irrigation being now confined mainly to the low lands adjacent to the streams. This leaves the higher lands of the valleys to be farmed, if at all, by dry farming methods.

In dry farming the crops grown are limited mainly to wheat, oats, barley and rye. Many varieties of vegetables can be successfully grown, but such crops are limited by conditions to a sufficient acreage to supply the local demand. In a few instances the growing of small grain, especially rye, has been found profitable for stock feeding, but the use of such forage is limited. The most successful dry farmers are those who practice summer fallowing, with thorough tillage for the conservation of moisture, by which the average yield of wheat is in the neighborhood of twenty bushels per acre. Under the present condition such farming is fairly profitable, but the uncertainty of markets, together with inadequate transportation facilities, makes such farming precarious, to say the least.

Under irrigation all the crops grown by dry farming can be successfully produced, and, in addition, many species of native and introduced grasses and clovers. In actual practice the crops grown under irrigation are confined almost entirely to such as can be used for the winter

feeding of stock. While the small grains can be successfully grown under irrigation, experience has shown it to be more profitable to devote irrigated lands to the production of hay crops, leaving the production of grain to such land as can not be irrigated. Of the hay crops alfalfa is the most profitable, producing a greater amount of forage, which also possesses a higher feeding value than the grasses. Two crops per year are usually cut, though a third crop is sometimes harvested. The average yield per acre is about three tons of cured hay, though cases are common in which the yield greatly exceeds that amount. The production of alfalfa at the present time is limited to such lands as have good natural drainage. Large areas immediately adjacent to the streams and subject to overflow are too wet, in their natural condition, for the growth of alfalfa, and are devoted to the growing of grasses. Such lands yield from one to two tons of cured hay per acre, the feeding value depending mainly upon drainage conditions. While such hay does not equal alfalfa either in feeding value or yield per acre, it is, and will continue to be, of great importance in stock feeding, owing to the fact that it can be very cheaply grown and cared for. The method of irrigation employed in the production of native hay is usually of the simplest nature, consisting mainly in the flooding of the land during the spring and early summer, which is accomplished by the construction of temporary dams in the water ways. Such a method of course consumes an excessive amount of water, and usually results in the production of an inferior quality of hay, since only the lighter grasses will thrive under excessive flooding. With suitable ditches to divert the water at the proper time so as to keep the land dry during the harvesting period, hay can be produced at a remarkably low cost. Even with the cheap methods of production as practiced, however, the farmer who does not own sufficient stock to consume his entire crop is seriously handicapped. Large quantities of hay are annually sold to be fed on the farms, but in this the producer is usually at the mercy of the feeder. The price paid for hay by feeders usually runs from \$4.00 to \$6.00 per ton for large quantities, and in many cases this price includes the labor of feeding.

During the past twenty-five years the methods of handling stock have been completely reversed. In the early days of the settlement of the country the vast areas of public range afforded an unlimited supply of summer pasturage, and the stock owner limited his herds to the number he could safely carry through the winter season. Practically all the beef sold at that time went directly from the summer range to market, only stock cattle being fed. The carrying capacity of the ranges has fallen off, due to overstocking and the encroachment of settlers while the production of hay has increased, until at the present time the size of herds is governed by the amount of summer range that can be

secured, and practically all stock is sent to market from the feed yards during the winter months.

The future development of this country will be mainly along the lines of increased stock production. This will be brought about by bringing large areas of the now dry lands under irrigation by the storage of flood water during the winter season, and the substitution, in part at least, of a rational system of diversified farming in which the only crop sold from the farms will be the finished product from feed yard or dairy for the old time pioneer methods now in vogue.

**By H. C. Watson of Bieber** (Manager of local cheese factories and creameries). Having been a resident of Big Valley for nearly thirty years, I am interested in its future and venture the following information.

Ten bushels of wheat per acre has been a fair average on dry lands. The irrigation of small grain has not become general because of the expense of getting water under present conditions, even though oats and barley often produce from 50 to 75 bushels per acre where land has a good chance for light sub-irrigation. Dry land alfalfa produces one crop averaging  $1\frac{1}{2}$  tons per acre, and some good pasture, while this land properly irrigated, drained, and leveled, would produce five times the amount. Under the present crude conditions, however, irrigated alfalfa land produces two good crops, and sometimes three, yielding from  $2\frac{1}{2}$  to 3 tons per acre annually. Our climate is also well adapted to the cultivation of such vegetables as potatoes, cabbage, turnips, beets, carrots, pumpkins, etc. Under irrigation 150 bushels of potatoes have been produced and other vegetables in proportion.

At the present time dry land is worth from \$5.00 to \$25.00 per acre depending on location and quality, while irrigated lands are worth as follows: Reclaimed swamp land is worth from \$25.00 to \$50.00 depending upon the facilities of water control; irrigated bottom land where wild hay is grown with improper drainage, is valued at \$25.00 per acre; irrigated alfalfa land is valued at \$40.00 to \$100.00 per acre.

About the time alfalfa was introduced into our valley the public lands in it were withdrawn by the Government for possible future use as a reservoir, and as a result our people have not been encouraged to prepare their land for alfalfa and make other improvements. Likewise all industries except dairying have been retarded and the population has been greatly diminished.

Grass hay is worth from \$4.00 to \$5.00 per ton. Alfalfa hay is worth from \$6.00 to \$7.00 per ton. There is no alfalfa hay for sale as it is all consumed on the dairy ranches on which it is raised. Small grains such as barley, wheat and oats bring on an average of 1 cent per pound. On account of the lack of transportation, the market for grain and hay

and garden truck is entirely local. There could be a great deal of grain sold to outside markets with proper transportation, but I am of the opinion that it would be much better to encourage the raising of sufficient stock to consume all food stuffs, and return to the land all the barn yard manure. With improved transportation Big Valley could have packing houses, creameries, more cheese factories and a general advancement in agriculture.

Big Valley is practically a stock and dairy section and is well adapted to the raising of full blood stock. Tuberculosis in cattle, and cholera among hogs are rarely known in this section. Under present transportation conditions we receive  $2\frac{1}{2}$  cents to 3 cents below San Francisco market quotations for our hogs. This valley produces about 3,000 head of hogs each year.

In 1914 Big Valley produced 215,527 pounds (about 173 tons) of cheese besides sufficient butter to supply local consumption. Like other industries, dairying is greatly handicapped on account of poor transportation conditions. Much of our cheese is damaged on the road, as it is either shipped by stage or by big teams. It is often three weeks en route to San Francisco. Notwithstanding the damaged condition in which it is delivered to the market, it demands a premium in the San Francisco market. Shipping of butter under present transportation conditions is out of the question.

Dairy cows are worth \$75.00 per head, dairy calves six months old are selling at \$25.00. The average production annually per cow is \$65.00 net to the farmer for milk besides the calf. The demand for small dairy farms is increasing.

But for successful dairying and alfalfa raising we must have irrigation—a system of storage whereby the flood waters can be controlled and used in the time of need. This alone would increase the population and productiveness of our valley five times.

**By Wm. Paulk, Farmer, of Bieber, in Big Valley.** Regarding crops in this valley under irrigated and dry farming conditions, I have had considerable experience along these lines and find that crops produced by irrigation so far exceed those produced by dry farming methods that the farmer is well repaid for the extra trouble and expense that are naturally created by irrigation systems. As you are well aware, the principal industries of this vicinity are the production of livestock and dairying. It is a natural consequence that the production of hay, grain and root crops engage the most of our attention.

Alfalfa is the principal hay crop and is produced both with and without irrigation. The non-irrigated alfalfa produces two crops per year followed by some pasture in the fall. The irrigated alfalfa produces three crops per year and a very good crop of late pasturage. The yields are  $2\frac{1}{2}$  and 5 tons per acre respectively. This crop has a local

cash market ranging from \$5 to \$7 per ton. This gives a gross receipt of a possible average of \$15.00 per acre from the non-irrigated field and \$30.00 per acre from the irrigated lands. The estimated cost of harvesting these crops is \$2.00 per ton. This leaves a net return of \$10.00 per acre from the non-irrigated and \$19.00 per acre from the irrigated lands, allowing \$1.00 per acre for water for irrigation.

These same lands under grain cultivation were producing about 20 bushels of wheat to the acre and 30 bushels of barley. This was bringing to the farmer about \$12.00 per acre. The estimated cost of producing these crops is \$7.00 per acre, leaving the farmer about \$5.00 per acre for his profit.

These conditions could no doubt be greatly improved under proper cultivation and the advantage of outside markets that will naturally follow the building of a railroad into this vicinity. The grain crop mentioned above was the average crop grown under dry farming, which is the usual method pursued in this valley. I have known a few pieces of wheat and oats that have been irrigated. There is no record of what the wheat produced per acre but I feel sure that 40 bushels per acre would be a very conservative estimate. The oats produced 110 bushels per acre. Under dry farming methods 40 bushels per acre would have been considered a good yield.

The production of hogs for the outside markets to any considerable extent was begun at such recent date that I can furnish you with no reliable information as to the feeding value of grain and root crops. Beef cattle have never been fed grain in this valley to speak of.

Vegetables, beets and potatoes are grown both with and without irrigation. These productions have a local value only and the price naturally fluctuates so greatly that it is impossible to determine what might be done along this line because of the indifferent cultivation they receive. The present yield is about two to one in favor of irrigation.

The noteworthy fact that nearly all of the wealthy people of this valley are those producing crops under the irrigated systems is a very forceful argument that irrigation is the proper condition for this valley.

## PRESENT APPROPRIATIONS AND USES OF WATER.

---

### GENERAL.

**Character of Investigation.** This investigation was commenced in the fall of 1914 at a time when irrigation operations in the Pit River Valley had to a large extent ceased. Field work was practically completed during 1914. It has consequently not been possible to obtain first-hand information as to stream flows, quantities of water diverted, water duty and other important details in connection with the uses of water for irrigation during a working season. Dependence has therefore had to be placed on indirect sources of information as to these matters, which have been supplemented by occasional measurements of ditch dimensions and by hearsay evidence. It may therefore result that much of the data herein presented on the present uses of water may err in matters of detail. It is, however, believed that the general results as submitted are substantially correct. Attention is specially directed to the fact that it is not the purpose of this investigation to ascertain precise details in the matter of present uses of water in any one locality, but to learn, in a broad way, the purposes and extent to which water is being used, and if possible to indicate in a similar broad way possibilities of achieving results of greater public advantage than now obtain.

Areas shown in a green tint on Plate 9 are under irrigation of some sort, as described in detail later in this chapter.

**Summer Flows Generally Used.** Practically all irrigable areas in the Pit River Basin lie east of the mountain divide which extends between the great peaks of Lassen and Shasta. In this region the summer flows of every stream with the exception of Fall River and Hat Creek are now fully used for irrigation. The natural summer yield is, moreover, to a small extent supplemented by a storage supply probably not exceeding 7,000 acre feet per annum in the aggregate.

**Pioneer Irrigation Systems and Methods.** Irrigation systems are small in extent and crude in construction and operation methods, having been mainly designed and built by individuals or small groups or communities, from time to time, as the needs developed and generally without regard to other consideration than cheapness in first cost. In a number of instances the ditches serve the dual purpose of irrigation and drainage, and as a consequence they are liable to be neither located nor constructed to serve either of these purposes to the best advantage. They have, however, afforded reasonably economical means of development, and under the circumstances were probably the best adapted to pioneer requirements.

**Use of Water.** As a rule water is used lavishly wherever and whenever a supply is available, especially on the bottom lands on which wild hay is raised. Probably an average of about two feet in depth of water is now used in a season in most localities, except where payment is made according to the amount used or where the supply is pumped, a low duty considering the short season during which water is available. East of Big Valley Mountain irrigation for alfalfa extends over about 100 days, while in Fall River and Hat Creek valleys the season is four to five months. Hay lands are generally irrigated until the latter part of June, usually by flooding, with later irrigation for pasturage if a supply is available.

**Water Rights.** Water rights are based generally on appropriations made under the old state law requiring posting of notice and filing with county recorder supplemented by actual beneficial use, and are considered as attached to the lands on which the water is applied and to pass with such lands when sales are made. No attempt is made herein to report on the nature or extent of existing filings in the county records which for the purposes of this report are unimportant, it being assumed that beneficial use of water on the lands is the only real measure of rights. As detailed later, several companies owning lands in these valleys have constructed ditches having capacities in excess of the needs of their lands, and have sold surplus water to other owners on the basis of payment for quantity delivered. These are the only cases where apparently the ownership of the water and the land rests in different hands, but even in these cases it may be assumed that the water is practically attached to the land.

### **NORTH FORK VALLEY.**

**Lands and Crops.** South of the divide that separates Goose Lake Basin from the North Fork Valley, and north of the city of Alturas there are about 2,300 acres of lands irrigated under ditches that take out from the North Fork and its tributaries. Irrigation began in 1880. The principal crops are alfalfa, wild hay and grain.

**Water Supply.** The streams from which supplies are drawn are the main stream of the North Fork and its eastern tributaries—Joseph, Tom, Parker, Swedrengen and Linville creeks, all of which rise in the Warner Range and are perennial. They furnish an ample and dependable water supply until about June 1st, after which the aggregate natural flow probably falls as low as four second feet in an ordinary year. Two small reservoirs, belonging to E. Lauer & Co. of Alturas, have been constructed on the plateau west of the North Fork, to supplement the late summer supply for about 500 acres located two miles northeast of Alturas. These reservoirs are probably capable of yielding a stored supply of about 1,000 acre feet.

**Comments.** The present water supply is generally adequate for the crops grown.

## JESS VALLEY.

**Lands and Crops.** This valley is situated about twenty miles southeast of Alturas. About 3,400 acres of the valley floor are irrigated. Wild hay is almost the exclusive crop, and is irrigated in the springtime as copiously as possible and harvested in July. Water is again applied to fields after the July harvest, to improve pasturage.

**Water Supply.** The ditches take out of Mill, East and Harvey creeks, perennial spring-fed streams rising in the Warner Range and converging into this valley, where they combine into the South Fork of Pit River. Probably an average quantity in excess of two acre feet per acre is used in a season. All operations are on a small scale, the natural stream flow without storage being used.

**Comments.** For the character and extent of cultivation now being carried on in this valley the water supply is adequate.

## WEST VALLEY.

About 1,200 acres of wild hay are irrigated in this valley. The average depth applied in a season probably exceeds two acre feet per acre, this being abundant for the purposes of use and also for pasturage after harvest.

## SOUTH FORK VALLEY.

**Lands and Crops.** About 19,000 acres are under irrigation in the South Fork Valley, extending from a point about three miles east of Likely down to Alturas. The crop is mainly wild hay, but a small proportion is in alfalfa and grain. Wild hay is harvested in July, and thereafter the fields are used for pasturage. Alfalfa and grain are mainly produced in the immediate vicinity of Alturas.

**Water Supply.** This is from the South Fork of Pit River, Pine Creek (a large feeder from the east), Fitzhugh Creek (a small feeder also from the east), and the North Fork of Pit River. All of these streams head in the Warner Range and are perennial. At the extreme south end of the valley there are some large springs that materially augment the summer supply. South Fork has a minimum discharge of about 25 second feet, a maximum of about 500 second feet, and a mean discharge of about 90 second feet; Pine Creek has a spring discharge of upward of 50 second feet, but in summer it falls to about 5 to 10 second feet; Fitzhugh Creek usually has a discharge of about 10 to 15 second feet in May and early June, and about 2 to 3 second feet in summer. The springs at the south end of the valley flow about 2 second feet.

The cessation of irrigation in West and Jess valleys after the end of June releases for use in the South Fork Valley a considerable proportion of the natural flow previously used in the above mentioned valleys. The return flow and drainage from the irrigated lands in West

and Jess valleys also aids in maintaining the flow in the South Fork during the summer season. The summer supply is further augmented by storage at Crooks Canyon, on the plateau west of the valley, whence about 1,000 acre feet is obtained.

During an ordinary year it is probable about 35,000 to 40,000 acre feet is available for irrigation use in this valley, by far the greater part of this amount being available in May and June. The amount of water applied probably is about two acre feet per acre, a low duty considering the shortness of the season of application.

**Irrigation Works.** The floor of the valley has very little gradient, and the natural water courses are inadequate to take care of the spring run-off. Previous to 1900 a large part of the south-central section of the valley was an unreclaimed swamp, although a few small drains had been cut through the lowest portion of it. In 1900 two drainage channels, about 4 feet deep and 30 to 40 feet wide, were cut on each side of the valley, enclosing and reclaiming about 10,000 acres known as the Corporation Ranch. These drainage channels extend northerly from a point about three miles north of Likely for a distance of about ten miles, and serve as outlets for the waters of South Fork and tributaries that had formerly spread over the valley floor and caused the swampy conditions referred to.

About 600 acres unreclaimed swamp remain in the north end of the valley and a small portion of the valley floor is still flooded whenever anything approaching high water occurs in the South Fork or tributaries. This occasional flooding is, however, an entirely different matter from the constantly saturated and useless condition in which the lands were prior to the construction of the channels. The channels not only drain off surplus waters but serve to deliver an irrigation supply during the summer season. Laterals take out from them and distribute over most of the Corporation lands.

Dukes Ditch heads three miles above Likely on the South Fork and delivers water to about 1,500 acres east and west of Likely. It has a capacity of about 15 second feet and a length of about six miles. About one-fourth mile further down stream, on the north side of South Fork, a ditch known as the Corporation or Williams Ditch takes out. This extends six miles north of Likely and irrigates about 1,800 acres. It has a capacity of about 30 second feet. Other local ditches are the Ganstads and the Van Loan ditches, both of which head in the South Fork to the east of Likely.

A ditch owned by the Pitville Ditch and Dam Company of Alturas takes out of the North Fork Pit River about two miles northeast of Alturas, and is used as a supplementary supply for about 1,000 acres adjacent to Alturas on the south and east. The company is not incorporated, and is believed to be practically an association of about six

settlers. The diversion dam is of timber, about 30 feet in width, with rockfill abutments. The main canal is 12 feet wide at the head, reducing down to about 5 feet at its lower extremity, with a maximum capacity of about 18 cubic feet per second. Each irrigator maintains a portion of the canal.

**Comments.** In May and early June the water supply is abundant for all lands irrigated in this valley. The supply for the lands served by the Pitville Ditch and Dam Company canal is reported to frequently fail after the early part of June. After about June 15th the supply for lands in the north half of South Fork Valley and those along Pine Creek is liable to fall very low, particularly in July, August and September. The southerly portion of the irrigable area of South Fork Valley, including somewhat more than one half of the entire area and which depends on ditches taking out from the South Fork, has usually an ample supply up to the end of July, after which date there is a deficiency.

**Miscellaneous Measurements of Water Flow.** The following miscellaneous measurements have been made of various streams and ditches in and tributary to the South Fork Valley (see U. S. Geological Survey Water Supply Report 298):

Date	Stream	Locality	Discharge second feet
Sept. 17, 1904	Ditch—Corporation or Williams -----	Near Likely (highest ditch on east side) -----	30
June 7, 1905	Ditch -----	2 miles east of Likely -----	23
June 20, 1905	Ditch -----	2 miles east of Likely -----	24
Sept. 6, 1905	Ditch -----	2 miles east of Likely -----	29
Sept. 17, 1904	Ditch—Dukes -----	Near Likely (highest ditch on southwest side) -----	3.3
Sept. 23, 1904	Ditch—Dukes -----	Near Likely (highest ditch on southwest side) -----	8.7
June 7, 1905	Ditch—Dukes -----	Near Likely (highest ditch on southwest side) -----	13.9
June 30, 1905	Ditch—Dukes -----	Near Likely (highest ditch on southwest side) -----	9.8
June 8, 1905	Ditch—Ganstads -----	2 miles east of Likely -----	6.9
July 2, 1905	Ditch—Ganstads -----	2 miles east of Likely -----	8.7
June 8, 1905	Ditch—Van Loan -----	2 miles east of Likely -----	35.0
June 20, 1905	Ditch—Van Loan -----	2 miles east of Likely -----	25.0
Sept. 15, 1904	Fitzhugh Creek -----	Near mouth -----	2.7
July 2, 1905	Fitzhugh Creek -----	Dotens ranch, 10 miles south of Alturas -----	1.8
July 25, 1905	Fitzhugh Creek -----	Dotens ranch, 10 miles south of Alturas -----	1.4
Sept. 7, 1905	Fitzhugh Creek -----	Dotens ranch, 10 miles south of Alturas -----	1.8
Sept. 16, 1905	Fitzhugh Creek -----	Dotens ranch, 10 miles south of Alturas -----	2.8
Aug. 26, 1904	Pine Creek -----	Near Pine Creek post office -----	7.0
Sept. 5, 1904	Pine Creek -----	Near Pine Creek post office -----	22.0
Aug. 11, 1905	Pine Creek -----	7 miles east of Alturas -----	12.4
Aug. 22, 1905	Pine Creek -----	7 miles east of Alturas -----	11.3

**WARM SPRINGS VALLEY.**

**Lands and Crops.** About 4,000 acres are under irrigation. The irrigated lands extend along Pit River from Alturas to a few miles west of Canby and along tributaries of the Pit, on Rattlesnake and Canyon Creeks and in Black Canyon. Wild hay, alfalfa and grain are the chief crops grown, in that relative order of importance.

**Water Supply.** The water supply for lands along Pit River is very unsatisfactory, owing to the flashy character of the stream flow. In springtime there is danger of flood damage, in summer the flow generally fails entirely. The maximum recorded flow of the Pit at Canby is 17,000 second feet, while the minimum is 1.5 second feet, though a brief discharge of several thousand second feet is not uncommon when the snows on the plateau melt in spring. Lands along Canyon Creek have a large water supply in May and early June, and in late summer they receive a dependable supply from springs amounting to about four second feet of flow. Rattlesnake Creek is extremely torrential and its discharge fails very early.

Messrs. Thomas and Raker of Alturas own two connecting reservoirs on the plateau northwest of Alturas. The usual storage collected by these reservoirs is about 2,000 acre feet. This supply is carried across the plateau for a distance of about 10 miles in a crudely constructed channel, mainly consisting of connecting natural depressions, supplemented by low dams and embankments, from which seepage losses necessarily are high. The supply is used for the irrigation of about 200 acres of the lands owned by the company northwest of Alturas. Supply not required for these land is sold to settlers near Alturas at \$3.50 per miner's inch a season (the miner's inch being considered one-fiftieth part of a second foot). Water is sold on this basis to about 500 acres of outside lands, making the total area irrigated from these reservoirs about 700 acres. This reservoir supply is used for alfalfa, young fruit trees and other crops, and according to statements given, one miner's inch supplies two and one-half acres, equivalent to one second foot to 125 acres, a fairly economical use. The net cost to the settler is thus \$1.50 per acre per season.

On the plateau north of Canby three small storage reservoirs, belonging to Messrs. Shippy and Dunean of Canby, furnish a dependable supply for 400 acres of alfalfa and hay land in Black Canyon, four miles north of Canby.

**Comments.** Lands irrigated along Canyon Creek have a dependable full season supply. Lands in Black Canyon and Warm Springs Valley northwest of Alturas, supplied by storage reservoirs, also apparently have a fairly dependable full season supply. All other lands irrigated, principally along Pit River and Rattlesnake Creek, are inadequately served.

BIG VALLEY.

**Miscellaneous Measurements of Water Flow.** On September 14, 1904, the flow of Canyon Creek was 3.8 feet. (See U. S. Geological Survey Water Supply Report 298).

### STONE COAL VALLEY.

Stone Coal Valley, seven miles southwest of Warm Springs Valley damsite, is the only irrigated area of any size along Pit River between Warm Springs and Big valleys, including about 500 acres of land, principally in wild hay, with fall irrigation for pasturage. The valley is above the level of Pit River. The water supply from Johnson Creek, which enters at the east, is generally abundant in spring, but in summer the flow of this creek and of springs which issue from the base of the mountains totals only from one to three second feet.

### ASH CREEK VALLEY.

About 4,000 acres of the floor of Ash Creek Valley, located about 15 miles southeast of Adin, are under irrigation for wild hay. These lands are irrigated after harvest for pasturage. The water supply is obtained from Ash Creek at the south, Cottonwood Creek at the northeast, and numerous large springs. A small storage has been developed on Cottonwood Creek to supplement the summer supply. The supply is abundant to June 1st, but after that date the combined supply falls to from 5 to 15 second feet, depending on the season.

### ROUND VALLEY.

This valley lies directly east of Adin. Twelve hundred acres of the valley floor are irrigated by water in Rush and Ash creeks, both of which are perennial streams. Alfalfa and wild hay are the chief irrigated crops, with late irrigation for pasturage.

The water supply entering this valley is abundant up to June 1st, after which it diminishes rapidly. The summer flow of Ash Creek at the outlet of Round Valley at Adin amounts to from 14 to 25 second feet; the mean flow being about 90 second feet.

Miscellaneous measurements on Ash Creek in Ash Valley and on Rush Creek in Round Valley are as follows (see U. S. Geological Survey Water Supply Paper 298):

Date	Stream	Locality	Discharge, sec. ft.
Apr. 5, 1904	Ash Creek -----	Ash Valley -----	194
May 5, 1904	Ash Creek -----	Ash Valley -----	189
June 4, 1904	Ash Creek -----	Ash Valley -----	30
June 10, 1904	Ash Creek -----	Ash Valley -----	27
June 12, 1904	Rush Creek -----	Round Valley -----	12
Aug. 30, 1904	Rush Creek -----	Round Valley -----	7.6
July 18, 1905	Rush Creek -----	Round Valley -----	5.6
Sept. 22, 1905	Rush Creek -----	Round Valley -----	5.8

## BIG VALLEY.

**Lands and Crops.** About 15,000 acres are irrigated in Big Valley, mostly adjacent to courses of the Pit River and its tributaries—Ash, Willow and Butte creeks and Bull Run Slough, all of which traverse the valley floor. Pit River flows from north to south for 20 miles through Big Valley. Ash Creek has a westerly course for ten miles from Adin to the point where it enters Pit River, and Willow and Butte creeks have a northerly course through the easterly part of the valley. About 5,000 acres south of Willow Creek and east of Pit River are irrigated by a canal from Ash Creek. Wild hay and alfalfa, in the order named, are the chief crops irrigated.

**Water Supply.** The principal sources of water supply are Ash Creek, Willow and Butte creeks (tributaries of Ash Creek), Pit River and Bull Run Slough. This stream flow is supplemented by storage at Roberts Reservoir, two miles above Lookout, where a supply of about 1,000 acre feet is obtained. Of these streams Ash Creek has the largest and most dependable summer flow. Its greatest discharge occurs before irrigation begins and generally falls during May to less than 50 second feet, and during July and August to about 15 to 25 second feet. Willow Creek has a large spring discharge, but in summer falls to about 5 second feet. It is used entirely on adjacent meadow lands for the irrigation of hay and fall pasturage. Pit River has a very large run-off in spring, but fails in summer.

**Principal Irrigation Works.** While much has been accomplished by the efforts of individual farmers, three organizations—one an incorporated company—have been largely instrumental in the irrigation development so far accomplished. The Lookout Dam Company, an association of four farmers, constructed a diversion dam on the Pit River at Lookout for the irrigation of 1,500 acres along the Pit in that vicinity. In 1884 it took over an old ditch which had been used to operate a grist mill, and built two and one-half miles of main canal by following and improving natural channels much of the distance. Recently a concrete diverting dam has been constructed at Lookout. The main canal is 5 to 10 feet wide and 2 to 5 feet deep, and is claimed to have a capacity of 50 second feet at the head. Irrigation is mainly for wild hay and, after harvest, for pasturage.

In 1884 settlers along Pit River near Bieber organized a voluntary association termed the West Side Irrigation Company, which undertook to perform by cooperative effort certain work, mainly the building of rough timber dams which would raise the water over adjacent lands. About 3,000 acres of hay and alfalfa lands along Pit River in the vicinity of Bieber receives a somewhat haphazard irrigation by this system. Alfalfa is also grown to some extent on the lowlands by sub-irrigation.

The C. W. Clark Company, an incorporated company of San Francisco, engaged extensively in the cattle business in Lassen County, has built a ditch about eleven miles long beginning five miles west of Adin and extending thence southwesterly to a point two miles below Bieber. This ditch reclaims about 5,000 acres of swampy land at the mouth of Ash Creek by diverting Ash Creek water therefrom. The water thus diverted is for an irrigation supply for about 5,000 acres of other land owned by this company and others, situated south and east of Bieber. At its head the canal is 3 feet deep and about 15 feet wide. Up to June 20th all the available supply of Ash Creek is usually needed on the reclaimed swamp land referred to, and other meadow lands between Adin and Pit River. After harvest, in the early days of July, the last mentioned lands ordinarily receive little or no irrigation for pasture, but depend on sub-irrigation for that service. The lands lying south and east of Bieber irrigated under the C. W. Clark canal are mostly in alfalfa, their first crop being produced without irrigation. The irrigation supply is available only after June 20th. The C. W. Clark Company is reported to sell its surplus water to settlers at \$1.00 per acre for the time water is available.

**Comments.** The supply in this valley is generally deficient. Meadow and hay lands receive little or no fall irrigation for pasturage and alfalfa lands generally receive irrigation for one crop only. Sub-irrigation is depended on when surface supplies fail.

**Miscellaneous Measurements of Water Flow.** In addition to measurements on Ash Creek at Adin and on Pit River at Canby and Bieber, the following miscellaneous measurements of the flow of Pit River and Willow Creek have been made (see U. S. Geological Survey Water Supply Paper No. 298):

Date	Stream	Locality	Discharge, sec. ft.
June 13, 1905	Pit River -----	County bridge east of Lookout	155
July 7, 1905	Pit River -----	County bridge east of Lookout	57
July 20, 1905	Pit River -----	County bridge east of Lookout	29
Aug. 19, 1905	Pit River -----	County bridge east of Lookout	9.9
Aug. 29, 1904	Willow Creek -----	Near Adin -----	5.6
Sept. 20, 1904	Willow Creek -----	Near Adin -----	5
July 19, 1905	Willow Creek -----	Near Adin -----	5.7
Sept. 21, 1905	Willow Creek -----	Near Adin -----	4.4

## WIDOW VALLEY.

This valley lies about six miles southwest of Lookout in the lower slopes of Big Valley Mountain. It includes about 600 acres of meadow land. The water supply is abundant in spring, but fails in summer.

**LITTLE HOT SPRINGS VALLEY.**

This valley is about fifteen miles west of Lookout, and contains about 600 acres of irrigated land. The principal crops are alfalfa and wild hay. Favorable climatic conditions make it possible to raise fruit and vegetables for local markets in neighboring communities. All irrigation is from springs which have a total flow of about 6 second feet.

**DIXIE VALLEY.**

Dixie Valley lies at the head of Horse Creek, twenty miles southeast of Pitville. About 1,200 acres of the valley are irrigated for wild hay and fall pasturage. The supply is from springs which have a dependable flow of about 12 second feet.

**LITTLE VALLEY.**

About 900 acres in Little Valley, located below Dixie Valley on Horse Creek, are irrigated by water from Horse Creek for wild hay and fall pasturage. The water supply is ample.

**PIT RIVER (Between Big Valley and Fall River Mills).**

About 4,000 acres of bottom lands adjacent to Pit River, from the head of the valley five miles above Pitville to Fall River Mills, are under irrigation. Alfalfa and wild hay are the chief crops. For lands above McArthur the supply is obtained from Pit River, Horse Creek, Beaver Creek and small springs. The supply is adequate in spring but deficient in summer. The lands below McArthur are irrigated from Fall River and from small streams and springs from the south. A drainage canal from Fall River Valley supplies water to lands along Pit River near McArthur, water being carried across Pit River in a 16-inch pipe line on the county bridge. At Fall River Mills a ditch delivers water from Fall River to lands on the north side of Pit River, and a 22-inch pipe siphon carries water over the Pit to lands along the south side of the Pit Valley. Lands between McArthur and Fall River Mills always have an ample water supply.

**FALL RIVER VALLEY.**

**Topography.** The valley floor includes about 50,000 acres. It is a flat plain tilted in a northerly direction, so that its highest and southerly edge is close to the north bank of the Pit River and its lowest or northerly edge is several miles to the north and about twenty feet lower. The lowest or northerly limit of the plain abuts the Modoc lava flow from which issue the large springs feeding Tule, Lake and Fall Rivers. Pit River lies in a small secondary valley apparently eroded in the southerly edge of the great plain before referred to. The north central half of the valley lies generally at the level of Fall River, averaging from about 1 foot above to about 3 feet below river level, and consists largely of swamp, while the southern half lies 10 to 20

feet above river level. At the east and west are bench lands 10 to 20 feet higher than the central valley area. As before stated, Fall River with its tributaries, Tule and Lake rivers, rises from springs at the northern edge of the valley and flows with an extremely light grade, averaging about one-fourth foot per mile, toward the south, to within one and one-half miles of the southern edge of this great plain near Fall River Mills, whence it drops to the Pit by two sets of rapids of 19.5 feet and 55 feet fall, respectively, or a total fall of 74.5 feet. On account of the extremely flat grade of Fall River in its course through the main part of the valley and the peculiar topography of the valley, which has an inclination dipping toward the source of the river, it is impracticable to divert a gravity irrigation supply from Fall River or its tributaries to any portion of the great plain except such small parts of the swamp as lie below river level.

**Lands and Crops.** About 6,000 acres are under irrigation in the great plain north of the Pit in Fall River Valley. Of this area, 1,500 acres consist of meadow lands adjacent to Fall and Tule rivers, irrigated only by natural overflow in spring and by sub-irrigation during the remainder of the year. These lands produce hay and abundant pasturage. About 3,500 acres of reclaimed swamp lands, mostly north of McArthur, are mainly in timothy hay. About 1,000 acres, mostly in alfalfa, scattered throughout the plain, are irrigated by pumping.

**Principal Irrigation Works.** About 6,000 acres of swamp lying north of McArthur have been partly or wholly reclaimed from overflow by means of levees along Tule and Lake rivers. A drainage canal about five miles long has been built through these lands from Tule River to Pit River. This canal, owing to the peculiar topographic formation before referred to, is deeper at its lower than at its upper end, its dimensions being 30 feet wide and 8 feet deep at the upper extremity and 18 feet deep at its lower. This drainage canal is also used for an irrigation supply for the reclaimed swamp, the water being backed up by temporary dams in the ditch and then forced over the land. The canal or drain has a timber headgate at Tule River and a timber chute at its point of discharge into Pit River, near McArthur. This system is proposed for extension to cover a total of about 15,000 acres in all. The main canal serves likewise as a supply canal for the low lands along Pit River, at the east and west of the town of McArthur.

About ten steam irrigation pumping plants are intermittently operated in Fall River Valley. The average lift is 10 to 15 feet. A plant on the Rogers Ranch has operated for 14 years, with a lift of 14 feet from Fall River to lands on the west side. A 12-inch centrifugal pump is driven by a 25-horsepower steam engine. The entire cost of

the plant is stated by Mr. Rogers to be \$1,400.00 f.o.b. San Francisco, or about \$1,800.00 installed. This plant is usually operated about fourteen hours a day for an average of forty days each year. About 350 acres of alfalfa and hay land are claimed to be irrigated by this means. The pump discharge measured by the United States Reclamation Service in 1914 was about four second feet when operating at the usual speed. Mr. Rogers says his operation expenses total \$8.50 per day, as follows:

2 cords wood delivered at \$2.25-----	\$4 50
14 hours labor-----	3 00
Oils and incidental repairs-----	1 00
Total -----	\$8 50

Sometimes only one or two crops are produced, although three or four crops can be raised in a full season. Fall pasturage is of high value (\$2.00 per acre for September and October), and has been considered by Mr. Rogers more advantageous than late farming. The cost of the plant is thus apparently a little more than \$5.00 per acre and the cost of pumping operation about 40 times \$8.50, or \$340.00—for the 350-acre ranch a cost of about \$1.00 per acre. Attention is directed to the fact that this amount is for only forty days' pumping and that it would be more for a full season.

The average amount of water pumped every fourteen hours with pump at normal capacity is  $\frac{1}{4} \times 4$  second feet  $\times 2$  acre feet per second foot = 4.8 acre feet. In forty days the supply is  $40 = 4.8$ , or 192 acre feet. The supply per acre is therefore 192 divided by 350, or 0.55 acre feet. As this plant furnishes water ordinarily for one to two crops a year, the average irrigation per crop is 0.55 divided by 1.5, or 0.37 feet, which is about four and one-half inches depth. For three crops the required irrigation would be thirteen and one-half inches, for four crops eighteen inches. While these data are necessarily approximate, it indicates the small amount of water required per acre in Fall River Valley where pumping installations can make deliveries directly to the land without appreciable loss in transmission. A number of farmers are now installing motors and pumps to use electric power from the plant in course of construction at Fall River Mills.

**Comments.** The water supply available by pumping is far in excess of all needs.

### HAT CREEK VALLEY.

From Great Spring to the Pit River about 3,000 acres of land, largely in small detached areas adjacent to Hat Creek, are under irrigation. The principal crops are wild hay and alfalfa, with late irrigation for pasturage. As water is easily diverted from Hat Creek, all ditches

are local in character. The supply is abundant at all times of the year and is generally used lavishly.

The following measurements of canals and ditches along Hat Creek have been made (see U. S. Geological Survey Water Supply Paper No. 298) :

Date	Stream	Locality	Discharge, sec. ft.
Aug. 15, 1911	Canal, irrigation ----	Diverts from Hat Creek above Hawkins Ranch, near Hat Creek	39.4
May 13, 1911	Ditch, Anderson et al.	At intake, Hat Creek-----	9.6
May 13, 1911	Ditch, Anderson et al.	At intake, Hat Creek-----	7.4
May 13, 1911	Ditch, Anderson et al.		
	O. R. L. lateral.-----		2.2
May 13, 1911	Ditch, P. M. Horn----	Crossing of Hat Creek Road-----	3
May 13, 1911	Ditch, H. Morris-----	300 feet below intake at Hat Creek	12.2
May 13, 1911	Ditch, Olive Updyke--	600 feet below intake at Hat Creek	5
May 13, 1911	Ditch, A. M. Reives---	900 feet below intake at Hat Creek	12
May 13, 1911	Ditch, L. H. Sullivan--	300 feet below intake at Hat Creek	8.3
May 13, 1911	Ditch, H. M. Wilcox--	Intake, Hat Creek-----	49

### BURNEY VALLEY.

About 1,500 acres along Burney Creek, above and below Burney, are irrigated. The chief crops are wild hay and alfalfa. The water supply is abundant in spring, after the middle of June the flow of Burney Creek being usually about 15 second feet. The water sinks in the valley below Burney and rises again at Burney Falls, ten miles north.

### GOOSE VALLEY.

In Goose Valley, three miles northwest of Burney, about 3,500 acres are irrigated for wild hay. The water supply is from Goose Creek, which has a large discharge in May and early June, but practically fails in summer. The valley is extremely flat and has only recently been reclaimed from swamp. Drainage appears to be the greatest problem, and the ditch system is still being improved. Under present conditions of imperfect drainage it has been difficult to raise satisfactory crops even of wild hay, but with complete drainage there should be no difficulty in this, and the present water supply will probably prove adequate. However, for complete reclamation and the production of the more valuable irrigated crops the supply will be insufficient.

### CAYTON VALLEY.

This valley is situated about ten miles northwest of Fall River Mills. About 1,300 acres are irrigated from Cayton and Clark creeks. Wild hay is the chief crop. The water supply is ample.

**PIT RIVER (Burney Creek to Sacramento River).**

Along Pit and McCloud rivers and Rock, Nelson, Kosk, Hatchet, Montgomery and Squaw creeks there are a number of small pockets of meadow and garden totaling perhaps about 2,600 acres. The water supplies are obtained locally and are generally abundant.

**Bench Land Areas.** The only place where an effort is being made to irrigate bench or plateau lands, is at Antelope Plains on the plateau north of Canby. Reclamation of swamps and the impounding of storage is being carried on by Messrs. Leland and Meyers of San Francisco, and about 500 acres is at present under irrigation. Water is obtained from a small storage reservoir to the northeast of the irrigated area. This work was completed in 1914. The entire available area has not yet been placed under irrigation.

**Diversion From Cedar Creek to Madeline Plains.** During the past four or five years a diverting canal and tunnel have been constructed from Tule Lake (a small lake or marsh on Cedar Creek at the headwaters of the South Fork of Pit River) to Madeline Plains, south of the main divide of the Pit Basin. This work has been carried out by a company that has undertaken the irrigation of several thousands of acres in Madeline Plains. The drainage of about 50 square miles, in addition to what formerly drained into and was lost by evaporation from Tule Lake, has thus been withdrawn from its natural outlet into Pit River basin. The water is impounded by a low dam in Tule Lake, now called Tule Lake Reservoir, located about 12 miles southeast of Likely. It is probable that the total annual supply withdrawn from Pit River basin by this development amounts to about 7,000 acre feet.

**Diversion From East Hat and Lost Creeks to Battle Creek.** About four years ago the Northern California Power Company constructed a ditch 21 miles long from East Hat and Lost creeks (small feeders of Hat Creek) to Bridge Creek, a tributary of Battle Creek. Battle Creek discharges into the Sacramento opposite Cottonwood. The company claims a diversion during the low water season of 600 statute inches, equivalent to 15 second feet. A recent court decision limits the diversion to the time following irrigation uses in Hat Creek Valley.

**SUMMARY OF IRRIGATED AREAS.**

Summary of Irrigated Areas.

Locality	Acres
North Fork Pit River.....	2,300
Jess Valley .....	3,400
West Valley .....	1,200
South Fork Pit River.....	19,000
Warm Springs Valley.....	4,000
Stone Coal Valley.....	500
Ash Valley .....	4,000
Round Valley .....	1,200
Big Valley .....	15,000
Widow Valley .....	600
Little Hot Springs Valley.....	600
Dixie Valley .....	1,200
Little Valley .....	900
Pit River (Pitville to Fall River Mills).....	4,000
Fall River Valley.....	6,000
Hat Creek Valley, including small adjacent areas.....	3,100
Burney Valley .....	1,500
Goose Valley .....	3,500
Cayton Valley .....	1,300
Pit River (Burney Creek to Sacramento River).....	2,600
Bench lands .....	500
Miscellaneous .....	600
<b>Total .....</b>	<b>77,000</b>

The above total includes all lands reported in detail in the preceding pages of this chapter and shown on Plate 9. No attempt is made in this tabulation to differentiate between the character of supplies available in each case.

## POSSIBILITY OF DEVELOPING ADDITIONAL SUPPLIES FROM OUTSIDE OF BASIN.

### GENERAL STATEMENT.

Below Big Valley the natural supply from local sources is generally adequate for all local needs, and a supplementary supply is unnecessary or would be more expensive than the development of local supplies. For lands in Big Valley and in the tributary valleys there are possible sources outside of the Pit River basin that will first be considered in detail.

Adjacent drainage areas to the south do not afford any practicable supply; in fact, these areas are more arid than the area of the Pit, and at one point a part of the supply for Pit River is actually being diverted across the divide to water lands in Madeline Plains.

The east side does not offer any promise, owing to lack of supply and to the great and continuous barrier to any diversions offered by the Warner Range.

Along the northwest boundary of the basin there is a possible source of supply from Goose Lake into the upper waters of the North Fork of Pit River and a further possibility of diverting the flow of Willow Creek (an important stream draining a large area north of Pit Basin and west of the Goose Lake Basin) across the northerly divide near Timber Mountain.

### WILLOW CREEK.

**Description.** About 550 square miles of partly timbered, more or less rocky plateau territory, drains into Willow Creek, which enters the Clear Lake reservoir built by the United States Reclamation Service for the Klamath project. Before the construction of the Clear Lake reservoir Willow Creek was the main supply for Lost River, which it entered at a point now submerged in the reservoir. The principal purpose of Clear Lake Reservoir is to restrain the spring floods of Willow Creek and Lost River above Clear Lake dam from passing down Lost River into Tule Lake, a large body of water, a part of the bed of which the Reclamation Service is proposing to reclaim. The plan of reclamation of Tule Lake bottom includes a diversion channel (now built) from Lost River to Klamath River, which when used in conjunction with the Clear Lake reservoir will enable all of the drainage of Willow Creek and Lost River above Clear Lake dam to be diverted into Klamath River, thus relieving Tule Lake of that water.

Another and subsidiary plan of the Reclamation Service is to use a part of the surplus waters of Willow Creek stored in Clear Lake reservoir for irrigation of lands in the Klamath project. Various

plans are under consideration for such uses, but owing to uncertainty as to the extent of the available supply from Clear Lake and the cost of the works necessary to utilize it, and to other reasons, no definite plan has been adopted.

**Supply.** The Clear Lake reservoir was first put in service in 1909. A summary of the yearly discharges of Lost River at the dam site prior to the construction of the dam and of Willow Creek at the point where it enters the reservoir since the latter has been built is presented. In addition, a summary is given of annual accumulations or depletions of storage in the reservoir and the losses due to evaporation and seepage.

Table of Data Clear Lake Reservoir.

Year	Yield of Lost River, or Willow Creek, acre feet	Storage in reservoir		Evaporation and seepage losses and uses, acre feet
		Gain, acre feet	Loss, acre feet	
1905 -----	47,000	-----	-----	-----
1906 -----	153,000	-----	-----	-----
1907 -----	252,000	-----	-----	-----
1908 -----	35,000	-----	-----	-----
1909 -----	108,000	50,000	-----	58,000
1910 -----	137,000	34,000	-----	103,000
1911 -----	178,000	74,000	-----	104,000
1912 -----	80,000	-----	11,000	91,000
1913 -----	89,000	10,000	-----	79,000
1914 -----	221,000	85,000	-----	136,000
Average -----	130,000	-----	-----	-----

**Method of Diversion Possible.** At the southerly extremity of Clear Lake reservoir the rim of the reservoir consists of a low, broad saddle through which a cut is practicable. A canal extending from this point in a direction about due south across the divide of the Pit River Basin near Timber Mountain would deliver into a tributary of the Pit River near Happy Camp, a supply available for use in Big Valley.

A line from the southern extremity of Clear Lake reservoir to the divide of the Pit Basin is only about 15 miles measured as the crow flies, but allowing for unavoidable sinuosities the actual length of a practicable canal would probably be not less than 25 miles from the reservoir to the divide.

**Comments.** At the present time the reservoir is about one-half full, its capacity being about 450,000 acre feet. The gates at the dam have been closed for six seasons, save that a few thousand acre feet were released each spring to accommodate ranchers in Langell Valley. The average discharge of the stream during the ten-year period on record is 130,000 acre feet per annum. Since the reservoir gates have been closed the aggregate stream discharge into the reservoir has been about 800,000 acre feet, of which possibly 25,000 acre feet have

been released through the gates and about 240,000 acre feet remained in the reservoir at the end of 1914. Thus about 550,000 acre feet have been lost by evaporation and seepage, or nearly 70 per cent of the inflow from Willow Creek.

It is clearly a matter of doubt as to how much of this supply can be considered as available for irrigation purposes. According to the record there is a gain of only 240,000 acre feet in six years, or about 40,000 acre feet per year, and this during a period when the inflow was about 20,000 acre feet per annum above the normal. If, however, the reservoir had been held at a lower level, with a smaller evaporating surface, the net yield would have been greater.

A very large part of the losses is due to seepage into the reservoir bottom. It is to be expected that these losses will tend to decrease as time goes on and the water-table around the reservoir becomes higher. There is, however, an element of doubt in this, as the territory around the lake is of volcanic formation, known to be extremely porous in some localities and with a water-plane normally at great depth below the surface.

It is, therefore, quite conceivable that the supply from this source will not develop on generous lines, and at the best its determination with any degree of accuracy must rest on a much longer record than is now available.

The average yield of Willow Creek appears to be pretty well established at about 130,000 acre feet per annum. The evaporation of the reservoir will run from 30,000 acre feet to 50,000 acre feet per annum, or an average of 45,000 acre feet, even under most favorable conditions and with the reservoir kept at a low level. The net dependable supply after allowing 10,000 acre feet annually for seepage would apparently not exceed an average of 75,000 acre feet in any event.

Assuming this amount could be released from the south end of the reservoir into a canal leading into the Pit River Basin and that such a canal would have a length of about 25 miles, it is then to be borne in mind that the intervening country through which the canal would pass is the peculiarly porous lava territory referred to in the section on "Porous Lava Areas" in the chapter on "Run-off" of this report. It may, therefore, be further assumed that seepage losses in this canal would be quite serious, unless a large part of the conduit were lined with concrete. Allowing for such measures as could be adopted, short of complete concrete lining, to mitigate seepage losses, it is probable that losses could not be kept down to less than 40 per cent of the water diverted. The net supply that could be received in Big Valley would therefore not exceed  $75,000 \times 0.6$ , or 45,000 acre feet. This figure may be regarded as a maximum, with the likelihood that it could not be

attained, owing to the various uncertainties referred to. Possibly not to exceed 30,000 acre feet per annum should be taken into serious account.

No estimate of cost of the work is available, but certain approximations have been made indicating that the diversion from the lake would cost about \$150,000 and the canal not less than \$250,000, or about \$500,000 for the water delivered over the Pit River divide, including an allowance of \$100,000 for the reservoir. This would be about \$17 per acre foot, and might be a possible reasonable solution of the problem if this supply may be properly considered as subject to diversion from the Klamath Basin into the Pit Basin.

Attention is, however, directed to the grave uncertainties involved in this plan, especially in the matter of minimizing seepage losses in the canal. In the absence of satisfactory solutions to all these problems it would be unwise to assume dependence on this supply. However, if we neglect these doubts and assume for purposes of discussion that 30,000 acre feet can be delivered at Big Valley in the summer period when the natural flow of Pit River usually fails, this supply might then be a valuable supplementary supply, enabling the complete irrigation of a large area of valley land.

## GOOSE LAKE.

**Location and Description.** Goose Lake is a large natural lake in northeastern California and southern Oregon, occupying the southerly end of an enclosed basin of 1,100 square miles. The depression constituting the lake bed is thought to have resulted from extensive faulting of the earth's crust along an anticlinal fold.\* Along its easterly side the Warner Range, with only a narrow bench intervening, rises sharply to an average elevation of nearly 7,000 feet. To the north and northwest a fairly broad valley extends from the lake toward the mountains which on this side rise with easier slopes to lower elevations. Along the west to southwest boundaries of the basin the formation is of a plateau character with still lower elevations. Along the south side is a gravelly beach at an average elevation of about forty feet above the lake surface. Through the beach formation the old lake outlet has been cut down to an elevation a few feet above the lake surface. The lake itself is about 186 square miles in area, or very nearly one-sixth of the entire drainage area. There is no discharge from the lake through the old outlet except as noted below. Evaporation on the 186 square miles of lake surface and such uses as are made for irrigation on lands marginal to the lake balance the aggregate run-off of the streams and the precipitation on the lake surface.

---

\*Waring, G. A., Water Supply Paper 220, p. 26.

Goose Lake at some former time must have been an important tributary of Pit River. The high beach at the south end of the lake, and the size of the ancient outlet channel, demonstrate that the lake once stood at a very much higher level and that the overflow must have been of the dimensions of a large river. It is clear that at such times precipitation was very much greater than now. That overflow from the lake continued to some extent until very recent times is indicated by the bare appearance of the outlet channel. In fact, as late as 1868 a small discharge for a few hours is reported by residents to have actually occurred, and in August, 1904, the water lacked only one foot of reaching the outlet. In August, 1914, the lake level was about three feet below the overflow channel.

**Quality of Water.** The condition of the lake water gives further indication that the lake had a fairly constant discharge through the old outlet at no very remote epoch. While it tastes slightly salty and a pond weed native to brackish waters grows in it, cattle drink it freely and large rainbow trout thrive. The following analysis of a sample of water from Goose Lake was made at the Agricultural Experimental Station at the University of California:

Analysis of Water From South End of Goose Lake.  
(Sample taken August 23, 1904, by S. G. Bennett.)

	Grains per gallon	Parts per 100,000
Potassium sulphate (very small)-----	18.06	30.91
Sodium sulphate -----		
Sodium chloride (common salt)-----	7.02	12.02
Sodium carbonate (sal soda)-----	30.90	52.89
Calcium and magnesium carbonates, etc. (small)-----	6.99	11.96
Calcium sulphate (gypsum) trace-----		
Silica (chiefly) -----	3.79	6.48
Organic matter, large, and chemically combined water--		
Totals -----	66.76	114.26

This result shows that the water is unfit for domestic and irrigation purposes.  
(Signed) GEO. E. COLBY.

**Lake Elevations, Areas and Capacities.** These are given below, all being referred to the water surface of August, 1904, when the lake was sounded and assumed to be 4,800 feet elevation. At that time the water surface was one foot below the old outlet at the south end of the lake. The maximum area of the lake at elevation 4,801 feet, the apparent elevation of the old outlet, is about 61 square miles in Oregon and 125 square miles in California; a total of 186 square miles, or approximately 119,000 acres.

Areas and Capacities.\*

At elevation	Area water surface		Capacity, acre feet
	Square miles	Acres	
Elevation of outlet channel.....	186	119,000	2,217,000
6 feet below outlet.....	170	108,000	1,536,000
11 feet below outlet.....	158	101,000	1,013,000
16 feet below outlet.....	136	88,300	540,000
21 feet below outlet.....	85	54,600	183,000
26 feet below outlet.....	29	18,600	†

\*Areas and capacities published in 1912 report of California State Water Commission modified to conform with soundings made by Goose Lake Valley Irrigation Company.

†Practically nothing.

**Water Supply.** Neither the amount of inflow nor the depth of evaporation loss is definitely known, but the average lake areas, precipitation at nearby places, and records of discharge on some of the streams can be used as a basis for a study and reasonable determination of water supply conditions. The annual replenishment is the sum of the net supply which the watershed around the lake delivers plus the direct precipitation on the lake surface. This is balanced by the average evaporation loss.

The ten-year record of precipitation at Alturas, Cal., which lies sixteen miles south of the lake, averaging 13 inches in depth, should be given most consideration because this station is located in the open valley away from any disturbing topographic influences. A long record at Lakeview, Ore., two miles northeast of the lake, averages 17 inches, but this station is situated at the base of the mountains and consequently receives a relatively greater precipitation. With the records at these stations as a basis, 14 inches has been assumed as the average annual precipitation over Goose Lake.

Local information indicates that probably the mean water level has averaged fully three feet below the outlet channel during the past fifty years, with a corresponding water area of about 112,000 acres, or about 175 square miles. The tributary land drainage has, therefore, been approximately 1,100 minus 175, or 925 square miles. The entire east side and the north and northwest portions of the drainage are mainly well timbered mountains which receive a relatively high precipitation. Records of run-off are available from Drews, Cottonwood, Thomas and Dog creeks, all of which are in Oregon. Fandango, Lassen and Davis creeks are the principal streams that flow into Goose Lake from the Warner Mountains. All of the above streams drain the eastern, northern and northwestern slopes. The conditions of precipitation and run-off in southern and southwestern portions of the drainage area are, however, quite uncertain and no actual measurements of flow exist.

**Metered Stream Flow.** A summary of the annual discharge of Cottonwood Creek, near Lakeview, Ore., 1908-1914 (drainage area thirty square miles), is as follows:

Season	Acre feet
1908-09 -----	*26,400
1909-10 -----	25,100
1910-11 -----	29,300
1911-12 -----	22,100
1912-13 -----	15,700
1913-14 -----	27,300
Mean -----	24,320

\*Partly estimated.

The average run-off during this period was slightly below normal. It may be assumed that the average annual discharge of Cottonwood Creek amounts to about 25,000 acre feet, or 833 acre feet per square mile of drainage area.

A summary of all available discharge of Drews Creek near Lakeview, Ore. (drainage area 211 square miles), follows:

Season	Acre feet
1908-09 -----	*105,000
1909-10 -----	89,200
1910-11 -----	81,800
1911-12 -----	41,300
1912-13 -----	47,000
1913-14 -----	91,600
Mean -----	75,900

\*Partly estimated.

It is probable that a longer record of run-off would give a mean run-off of 80,000 acre feet annually, or 380 acre feet per square mile of drainage area for Drews Creek.

The annual discharge of Thomas Creek near Lakeview is as follows. The area of the watershed is about 30 square miles.

Season	Acre feet
1911-12 -----	*12,800
1912-13 -----	10,300
1913-14 -----	18,100
Mean -----	13,700

\*Partly estimated.

It is assumed that a more probable mean is 14,000 acre feet, or 467 acre feet per square mile for Thomas Creek.

The complete discharge from the metered mountain watershed is as follows:

	Drainage area, square miles	Total discharge, acre feet
Cottonwood Creek .....	30	25,000
Drews Creek .....	211	80,000
Thomas Creek .....	30	14,000
Totals .....	271	119,000

Average run-off per square mile equals 440 acre feet.

**Unmetered Run-off.** The additional mountain area of 200 square miles, located largely in the Warner Mountains, averages somewhat higher in elevation and is more productive of run-off per square mile, and for it an average of 500 acre feet per square mile, or 100,000 acre feet total has been assumed. For the valley and bench land area, consisting of 455 square miles, mostly along the north side, a mean run-off of 200 acre feet per square mile, or approximately 90,000 acre feet total is considered a fair assumption.

**Summary of Existing Conditions.** It is not known how much of the stream flow is disposed of in irrigation uses, evaporation from lands, etc., around the lake, but during recent years it probably has averaged not less than 40,000 acre feet. With this basis, which is necessarily only approximate, the following summary may be accepted as a rough indication of water supply and water usage and loss that have probably existed for the past twenty years.

	Acre feet
Supply from metered streams—	
Cottonwood Creek .....	25,000
Drews Creek .....	80,000
Thomas Creek .....	14,000
Supply from 200 square miles mountains, unmetered.....	100,000
Supply from 455 square miles valley lands and plateau.....	90,000
Total gross supply from area around lake.....	309,000
Deduct for irrigation uses.....	40,000
Total supply from marginal lands.....	269,000
Supply from direct precipitation on lake surface, 175 square miles or 112,000 acres multiplied by 14 inches equals.....	131,000
Total average net supply received annually into Goose Lake....	400,000

Of this supply nearly 70 per cent is received from the land areas tributary to the lake, while about 30 per cent is from direct precipita-

tion on the lake. The total evaporation loss, amounting to 400,000 acre feet over an area of 112,000 acres, indicates that the annual depth of evaporation on the lake is approximately 42 inches, a deduction that apparently is supported by observations made a few years ago at Tule Lake, a body of water of almost equal size but at a somewhat lower elevation and situated about 45 miles due west of Goose Lake.

**Probable Changed Condition of Inflow Due to Irrigation.** An irrigation project contemplating the watering of a large body of land north and northwest of the lake is now under construction. A reservoir of 60,000 acre feet capacity has been built on Drews Creek (the most important tributary of the lake), and other possibilities of 30,000 acre feet storage on Cottonwood Creek and 35,000 acre feet on other tributaries are under consideration. The company promoting the irrigation development claims to have storage sites of aggregate capacity of 125,000 acre feet, and other known sites may bring the total up to 150,000 acre feet. It is uncertain how much irrigable land around the lake not yet watered exists; it is believed, however, to exceed 100,000 acres in extent. If such an area be irrigated in the next few years it is fair to assume that not less than 130,000 acre feet will be permanently withheld from the lake and that the situation as to lake conditions would be as follows:

		Acre feet
Supply from streams.....		309,000
Deduct for irrigation.....	130,000 40,000	
		170,000
Total supply from marginal lands.....		139,000

An acre of lake surface receives approximately 1.2 feet of rainfall and loses 3.6 feet by evaporation, the net loss being about 2.4 feet per annum. An inflow of 139,000 acre feet will therefore require a water surface of 139,000 divided by 2.4 to dispose of such a supply by evaporation. This will mean the lake would shrink to about 60,000 acres, or one-half its present size. Such a shrinkage would, however, lay bare a marginal area of about 50,000 acres, which in turn would yield a run-off instead of a net loss, as at present. It would be unprofitable to attempt to compute an exact balance between these items, as precise determination is impossible, under the roughly approximate premises alone possible. It is, however, apparent that a lake area of a little less than 70,000 acres would result from the application of the assumptions given above on the irrigation of 100,000 acres of new lands marginal to the lake.

IRRIGATION WORKS IN NORTH PART OF GOOSE LAKE BASIN.

JESS VALLEY RESERVOIR SITE.

Neglecting consideration of future increase in irrigated marginal lands, it can readily be deduced what will be the net yield of the lake basin if the lake be lowered to different levels. Under the assumptions and deductions that have been made as to the yields of the tributary areas and evaporation losses an acre of marginal land is assumed to yield about 0.3 acre feet of run-off per annum, and an acre of lake to occasion a net loss of 2.4 acre feet. If, therefore, the lake surface be reduced by an acre the net yield of the basin will be increased by 0.3 plus 2.4 acre feet, for the reason that a net loss of 2.4 acre feet will be changed to a net gain of 0.3 acre feet. A reduction of lake area of 10,000 acres will therefore enable a draft of 27,000 acre feet to be made. The following table gives the possible annual drafts with the lake maintained at different average levels.

Elevation	Acreage of lake	Possible draft, acre feet
0 feet -----	119,000	0
3 feet below -----	112,000	0
6 feet below -----	108,000	11,000
11 feet below -----	101,000	32,000
16 feet below -----	88,300	64,000
21 feet below -----	54,600	155,000
26 feet below -----	18,600	252,000

**Possibility of Diverting a Supply From Goose Lake for the Pit Basin.** On Plate 13 is shown a profile of a canal cut through the lake outlet whereby the lake supply could be drawn down upwards of 20 feet below its present level. The subgrade of the canal is set at 26 feet below present lake level at its upper end, it being assumed that the canal would operate with a water depth of 8 feet at that point, drawing the lake down to 18 feet below its present level. This would enable a draft of about 150,000 acre feet per annum to be made, reducing the lake level to less than 55,000 acres. Such a canal would have a length of about 20 miles. The excavation would average 40 feet in depth for five miles and would total about 5,500,000 cubic yards. Assuming an average price of 25 cents per cubic yard for earth and \$1.00 for rock excavation, and assuming further, in the absence of definite knowledge of subsurface conditions, that about one quarter of the excavation will be rock, or say an average excavation cost of 50 cents per cubic yard, then the total cost of excavation will be \$2,750,000. With incidentals, cost of structures and engineering added, the total will easily read \$3,500,000. The cost of this supply would therefore be about \$23 per acre foot. There is little probability that these unit prices could be substantially improved by an adjustment of the canal gradient or depth of cut. These figures are submitted to illustrate that from the economic standpoint any plan involving lowering the lake outlet is not

desirable. As a matter for practical consideration, however, such a plan has no place. It has been shown that plans for irrigating marginal lands to the lake in Oregon are well advanced in construction and that an ultimate draft of 130,000 acre feet on tributary streams may be expected in the next few years, which will of itself tend to reduce the lake level to about 18 feet below its present elevation. Without attempting to discuss what will be the effect of a lowering of 18 feet of this interstate navigable body of water from the standpoint of legality or of riparian damage, it is clear that a further lowering of the lake for the purpose of watering lands in California would involve interference with rights and priorities already established or well advanced toward establishment, as well as interstate complications.

Acts passed by Congress and by the states of California and Oregon in 1905 and 1906 contemplate the possible lowering of the water level of Goose Lake and the reclamation of a part of the lake bed. At the time the legislation was passed the deepening of the lake outlet by a cut was considered as a practical plan and little irrigation was in contemplation along the marginal lands in Oregon. The studies here made indicate that the lowering of the lake level must be a logical and certain result of the irrigation development in Oregon and that deepening the lake outlet is unnecessary for the purpose of reclaiming the lake bed.

**Canal Along Base of Warners to North Fork of Pit River.** There is a possible plan of constructing a canal some 35 miles along the east side of Goose Lake, into which the drainage of about 150 square miles of the Warner Mountains might be collected and diverted into the North Fork of Pit River. Such a canal might deliver 20,000 to 50,000 acre feet of unappropriated water annually, depending on the size of canal constructed and whether lined or unlined, at an expense of about \$25 per acre foot. As this supply would be mainly obtained during winter and spring, storage on the Pit or elsewhere would add about \$10 per acre foot, making the total cost \$35 per acre foot. This canal would have the one advantage of providing a supply of water of unquestionable quality, and during summer might be used to some extent for local distribution.

**Summary.** Any irrigation supply obtained directly from the lake would be of doubtful quality, and its acquisition would be surrounded by legal and practical difficulties of an insuperable character. The only scheme of practicability for using water from Goose Lake basin is by the plan of a diversion or intercepting canal along the base of the Warners supplemented by a reservoir for storage purposes at some point in the Pit basin. This plan at \$35 per acre foot is not at all attractive. All things considered, a supply for the Pit basin from this source is infeasible.

## STORAGE POSSIBILITIES IN THE BASIN.

### GENERAL STATEMENT.

The drainage basin of the Pit contains a number of valleys admirably shaped for storage purposes, having narrow gorge-like outlets across which dams of moderate size would impound large bodies of water.

The somewhat unusual conditions obtaining in the upper part of this basin are that the available storage capacity is, out of all proportion, in excess of the run-off. Assuming that dams of the heights proposed are practicable (as appears probable), it is possible to impound at the various sites many times the amount of maximum run-off even of the main river.

A dam only 100 feet high at the outlet of Big Valley would create storage of 3,200,000 acre feet, while the maximum discharge on record is only 1,400,000 acre feet in a single year, and the mean discharge is only about 430,000 acre feet per annum. A dam 70 feet high at the outlet of Warm Springs Valley would store 560,000 acre feet, while the average flow of the stream is probably not more than 220,000 acre feet. A 100-foot dam at Round Valley would create storage capacity of 185,000 acre feet, with an average annual stream discharge of probably less than 70,000 acre feet. Again, a 100-foot dam at Jess Valley would give about 245,000 acre feet of storage, for an average discharge of about 50,000 acre feet.

There is yet another large reservoir site at Fall River Mills and McArthur, where a 90-foot dam would impound 650,000 acre feet in Pit and Fall River valleys, which storage could be almost indefinitely increased by moderate increases in the height of the dam.

The problem in this region is not to find storage sites, which are abundant, but to determine the economic extent to which storage can be developed and the best location for each storage. Plate 14 shows the location of all reservoir sites herein discussed.

A report on the Iron Canyon project, issued by the Reclamation Service in November, 1914, deals with the question of storage in the upper Pit Basin for the use and benefit of lands along the Sacramento River below the mouth of the Pit. This report shows that storage on the Pit above Pitville is both unsuitable and uneconomical from the standpoint of usage on Sacramento Valley lands or for flood control purposes on the Sacramento River. It shows, in addition, that storage for irrigation for the benefit of Sacramento Valley lands is feasible at the Fall River Mills site, but less desirable than storage lower down the river.

The findings of this investigation go to substantiate the conclusions reached in the report on the Iron Canyon project as to the undesirability of Pit River supplies and storage for Sacramento Valley uses. In this report, therefore, no consideration has been given to uses or requirements along the Sacramento River.

It is of the highest importance to bear in mind these limitations, which are further illustrated by the fact that the average annual discharge of the entire Pit River at Big Valley is only 430,000 acre feet, an amount which, if it were possible to wholly conserve and utilize, without any evaporation or other losses, would probably only be sufficient to irrigate about 200,000 acres of land. It is, however, well known that any practical developments of Pit River supplies must necessarily entail heavy losses from evaporation and seepage in the reservoirs and canals, and moreover at times a large part of the flood waters that can not profitably be stored must be wasted. It is, therefore, a physical impossibility to develop a dependable storage supply in the upper valley of more than about one third of the above quantity. During the four year period from 1898 to 1901, inclusive, it is estimated the average yield from Pit River at Big Valley was only about 150,000 acre feet, or not more than enough if fully conserved without losses to irrigate more than about 75,000 acres in addition to present developments, but with such losses as are unavoidable in any system the possible area for development must be very much smaller even than that.

These general figures are submitted to show that the entire supply of Pit River above Pitville practical for utilization is at best scanty and should be used on lands in the Pit River basin, if such are available.

All reservoir sites in Pit River basin which might possibly be used to augment the summer flow available for irrigation are considered here in detail. These sites are Jess and West valleys on the South Fork of Pit River, Round Valley on Ash Creek, Big and Warm Springs valleys on Pit River, and also Dixie and Little valleys on Horse Creek, Widow Valley west of Lookout and Big Springs on Hat Creek. In addition, the possibility of utilizing sites on the plateau in the vicinity of Alturas, including Delta Lake, Crooks Canyon and Big Sage and a succession of very small storage sites along Pit River and other streams where lands are of low agricultural value, are considered.

#### **GENERAL FEATURES OF CONSTRUCTION.**

No attempt has been made in this investigation to make borings at the various dam sites or to undertake any elaborate study to determine feasibility of construction at any given point. A careful superficial examination and survey has been made at each point, supplemented occasionally by a few test pits through the surface material. The dams under consideration in this report are of moderate heights and dimensions, and their construction may be reasonably assumed

as practicable, within the estimated costs, unless very exceptional and unfavorable conditions should be disclosed by a final examination.

At all dam sites the formations are of volcanic origin and consist of successive flows of basaltic lava rock, more or less free from tuff and other eruptive materials, or of fairly extensive beds of tuff. At some sites these general formations are both in evidence. The basaltic lava rock is hard and usually weighs 165 to 170 pounds per cubic foot, but the formations are generally very much broken and shattered and, as a consequence, liable to furnish a foundation that is not sufficiently homogeneous to give a uniform bearing, if subjected to large unit pressure, and also one which will permit of considerable leakage.

At some sites, where the flows are of great thickness and fairly massive in character, conditions might be considered favorable for the construction of a masonry dam of moderate height. Two considerations, however, make such dams undesirable. The first objection to a masonry dam is that it lacks elasticity, and is therefore at a disadvantage under conditions likely to arise in this region, where earthquake shocks may be expected, and many of the sites are liable to be located on the axis of fault lines along which movements of the earth's crust are usually most serious. The second objection to such a dam would be the expense of cement. In addition to high railroad charges for freight, a wagon haul of 25 to 50 miles generally over mountain roads is required to reach the dam sites. It is advisable, therefore, to limit the design of dams to types which make maximum use of local materials. Either an earth or rock-fill dam, or a combination of both, meets the requirements of elasticity and minimum expense of transportation.

## **EARTH DAMS.**

Where the formations are mostly tuff, the absence of rock in reasonable quantity prevents consideration of a rock-fill dam. Good earth material is found reasonably near all sites of this character where earth dams are proposed. Their upstream face is designed on a slope of 3 horizontal to 1 vertical, the downstream face 2 horizontal to 1 vertical, with 20-foot crest and the top of dam usually about 10 feet above high water level. Such a dam requires a liberal spillway to carry surplus flood waters from the reservoir without encroaching unduly on the freeboard. A concrete outlet conduit, leading from a concrete gate tower, is used to regulate deliveries of stored water from the reservoir. Riprap facing, 12 to 18 inches thick, is provided for the upstream slope. A very important feature of dams of this kind is the cut-off wall, in cases where one is necessary. This should extend to a sufficient distance under the dam and into the abutments where there is a possibility of dangerous leakage.

## **EARTH AND ROCK DAMS.**

Where the foundations are of basaltic lava rock an earth and rock-fill dam furnishes a structure which can be constructed of the materials available near each of these sites. The rock-fill is built compactly with upstream slopes of  $1\frac{1}{4}$  horizontal to 1 vertical, and downstream slope of  $1\frac{1}{2}$  horizontal to 1 vertical, with top width of about 15 feet. The earth embankment is built as a facing over and against the upstream slope of the rock fill. The upstream slope of the earth facing is designed as 3 horizontal to 1 vertical with 5 feet top width. In this structure the impervious earth facing serves to prevent the escape of leakage while the rock fill withstands whatever pressure may be exerted. The rock fill likewise provides ample and safe drainage for leakage that may escape through or under the earth embankment. As such dams would be constructed on bedrock, generally it would not be necessary to provide for an extensive cut-off wall. All the other features proposed for earth dams, such as a wasteway, gate tower, outlet conduit and riprap facing are likewise needed for the earth and rock-fill dam.

## **PRICES USED IN ESTIMATES.**

The value of all lands that would be submerged has been estimated on a liberal basis. The full market value has been ascertained, so far as possible, from owners or settlers in the locality and others well informed about local land values. In addition, an allowance has been made for the purchase of marginal lands in excess of the areas actually submerged, so as to include odd portions of ranches that would be rendered inaccessible, undesirable or worthless.

Except for team work, which should be low in cost on account of the abundance of cheap hay and grain in this region, construction costs will generally be high. All materials that it is necessary to ship in, such as cement, and all labor and equipment, will be expensive on account of the great distances from the large market and labor centers. On this account it is advisable to make estimates of unit cost sufficiently liberal. In addition, an overhead charge of 25 per cent is added for engineering and contingencies.

## **JESS VALLEY RESERVOIR SITE.**

**Location and Description.** Jess Valley reservoir site occupies the lower 2,500 acres of Jess Valley, a small mountain-bound valley of the Warner Range 20 miles southeast of Alturas and 12 miles east of Likely. Mill, East and Harvey creeks, small perennial streams of the Warner Mountains, join at the valley outlet, forming the headwaters of the South Fork of Pit River.

A well defined shore line at about elevation 5,200 feet is in evidence around practically the entire site, indicating the existence of a lake at some former era before the valley outlet had been cut down to its

present stage. The hills rise sharply along the west, while at the east the steep outwash slopes from the mountains extend over the flat valley floor.

Until recently the lower or western part of the valley near the outlet has been swampy, but the excavation of ditches is rapidly converting this swamp into hay land. The rocky washes from the mountains make the eastern portion of the reservoir site suitable for pasturage only. The central part of the basin is meadow land, which produces hay and fall pasturage. Most of the area is in the ownership of one company. About 100 acres of swamp remains in public ownership.

**Water Supply.** Ninety-one square miles of drainage from the highest portions of the Warner Mountains contribute run-off to the Jess Valley reservoir site. The elevations of the drainage area range from 5,100 feet at Jess Valley to practically 10,000 feet at Eagle Peak, the highest point in the Warners. It is estimated that the annual precipitation over this area varies from 24 to 30 inches, most of which occurs in the form of snow. Much of the run-off is absorbed into the underlying porous formations from which it issues later as springs. As a result the streams that discharge into Jess Valley have a remarkably well regulated flow, and are not subject to large floods in spring or failure in dry years.

From January to September, 1904, inclusive, the estimated discharge of South Fork of Pit River at the Jess Valley damsite was 63,600 acre feet. For the entire year 1904-5 the estimated discharge was 42,800 acre feet. With an approximate record of two years only, the first of which was excessively wet, it is not possible to accurately determine the average annual run-off. However, it is known that in 1904-5 the run-off of the Pit above Bieber was only 70 per cent of normal. As the streams which discharge into Jess Valley are fed by large springs which issue from the porous formations of the Warner Mountains, while much of the drainage tributary to the Pit at Bieber is furnished by flat adobe-capped plateau areas which give a relatively low discharge in years below normal in run-off, it is reasonable to assume that the deficiency in the flow of the Pit at Bieber in 1904-5 was due largely to the plateau areas. It is probable that the run-off of South Fork at Jess Valley in 1904-5 was about 90 per cent of normal. On such a basis the average annual run-off is approximately 42,800 divided by .90, or 48,000 acre feet. On account of underground storage conditions the flow in driest years probably does not fall much below 40,000 acre feet. The extremely large run-off of 1903-4 which would have totaled about 70,000 acre feet for the entire year, may be considered one of maximum discharge which is seldom, if ever, exceeded.

A reconnaissance was made to determine the feasibility of increasing the drainage area by diverting Parsnip Creek, the best stream of West

Valley, over into Jess Valley. It was found that such a diversion could be made very easily by a ditch only 2,500 feet long where the outlet of Blue Lake and springs below the lake join Parsnip Creek on the McGarva ranch. In fact, a small ditch had once been constructed along this location to divert water to lands in Jess Valley. The total construction cost of adding this supply to Jess Valley reservoir would probably not exceed \$2,500, and it is estimated that in the seven months of the year during which the flow of this stream is not used, a total run-off of about 7,000 acre feet would be obtained. This water supply is very dependable as most of it is from springs.

Of the total average run-off of the South Fork of Pit River from Jess Valley, thus estimated at 48,000 acre feet, about 15,000 acre feet, probably the normal discharge during the irrigation season, is now used in South Fork Valley, leaving 33,000 acre feet unappropriated. With the 7,000 acre feet available by diversion from Parsnip Creek, the total unappropriated run-off would amount to about 40,000 acre feet. The annual precipitation at the reservoir site is about 24 inches in depth, and the irrigation uses and the water and soil evaporation losses amount to fully 36 inches in depth annually. Evaporation and seepage losses over the average water surface of a reservoir should not exceed an annual depth of 40 inches. It seems safe, therefore, to assume that for an average water surface of about 1,600 acres, which is approximately the present swamp and hay land area, all loss in evaporation and seepage will be offset by precipitation that would be received directly on the water surface and by the water now used for irrigation on the lands in the reservoir site. The assumed average water surface is sufficiently liberal in area to permit of carrying in reserve a surplus of about 15,000 acre feet for use in dry years. The net available supply from the reservoir will therefore be estimated at 40,000 acre feet.

**Damsites.** Along the first 3,000 feet or more at the head of the outlet from Jess Valley there are a number of possible damsites. Near the upper end the low rounded hills at either side are mostly tuff formation and the canyon is free from debris. The width between abutments is from 300 to 500 feet. About a half mile further down the canyon walls rise much higher and the formations are mostly basaltic lava with interbedding of tuff. The debris from the cliffs above has filled the canyon to a V-shaped gorge. On the surface there is a great mass of large angular lava rock underlaid with an aggregate of tuff and smaller rock. In the first 3,000 feet of the outlet from Jess Valley the fall is about eight feet. At these sites the type of dam is limited to either an earth or earth and rock-fill. At the upper site an earth dam appears to be most suitable, as such a structure could be built directly on the alluvial fill, with only shallow stripping. A cut-off probably would be needed to stop percolation under or around the dam. The site likewise

apparently offers good opportunity for the construction of an outlet tunnel through the south abutment and for a wasteway through a low saddle well back from the dam.

The lower site is not considered favorable, as it would require much expensive excavation to remove the great mass of loose rock talus overlying the site. The expense of building an earth and rock-fill dam or an earth dam would exceed that for an earth dam at the upper site, and wasteway construction would be more difficult.

At the upper site a shallow test pit, sunk to a depth of twelve feet, encountered one foot of soil at the surface, eleven feet of tight blue clay, and water-bearing gravel at the bottom. No attempt was made to go deeper by installing a pump. This test pit gives absolutely no indication of what depth beyond twelve feet bedrock or a tight foundation might be reached, if it should be found at all at this site. It does indicate, however, that there probably would be no great difficulty in stripping enough clay from the area above the damsite for the construction of a low dam.

**Reservoir Capacity and Areas.** The following table shows the area that would be submerged and the storage for various heights of the water line above the level of the average ground surface at the dam. The corresponding elevations, assumed datum, of the water level are also given.

Height of water level above plain at dam	Elevation water surface, assumed datum	Area flooded, acres	Storage, acre feet
0 feet -----	100	0	0
2 feet -----	110	810	810
12 feet -----	120	1,730	13,500
22 feet -----	130	2,160	33,000
32 feet -----	140	2,460	56,000
42 feet -----	150	2,700	81,000
52 feet -----	160	2,880	110,000

NOTE.—The ground surface at the damsite averages about 108 feet elevation, assumed datum.

**Construction Details.** As it is proposed to carry a surplus of 15,000 acre feet in addition to the annual supply of 40,000 acre feet, storage should be provided for fully 55,000 acre feet. It will be assumed that the storage level would be 140 feet elevation, assumed datum, or 32 feet above the base of the dam. The height of the dam would be 42 feet, or 150 feet elevation, assumed datum. In the absence of definite information about the foundations, it is assumed that it will be necessary to carry a well-timbered trench to an average depth of 40 feet and to refill this trench with clay puddle. The probability of encountering a large volume of water in this excavation

would make the unit cost high. North of the Flernoy ranch house, one mile east, a pit of excellent wash gravel, which has been opened up for surfacing of roads, would be very suitable for use in concrete.

Such equipment, materials and supplies as it would be necessary to ship for this work could be delivered at Likely, twelve miles west, on the N. C. O. Railway. The haul by team would be about fifteen miles.

#### Estimates of Cost.

Stripping 2,000 cubic yards at 25 cents-----	\$500	
Excavation of cut-off—		
Bottom, 5,000 cubic yards at \$3-----	15,000	
Sides, 2,000 cubic yards at \$1-----	2,000	
Clay puddle, 7,000 cubic yards at \$1-----	7,000	
Earth embankment, 72,000 cubic yards at 50 cents-----	36,000	
Riprap, 1 foot thick, 2,000 cubic yards at \$3-----	6,000	
Outlet tunnel, lined, 250 cubic feet per second capacity, 400 feet at \$25-----	10,000	
Gate tower and gates-----	6,000	
Wasteway, 2,500 cubic feet per second capacity—		
Excavation, 10,000 cubic yards at 75 cents-----	7,500	
Concrete, 600 cubic yards at \$12.50-----	7,500	
Road construction-----	1,000	
Diversion canal from Parsnip Creek-----	2,500	
<hr/>		
Total cost of construction-----	\$100,000	
Engineering and contingencies at 25 per cent-----	25,000	
<hr/>		
Total-----		\$125,000
Land and damages, including overhead expense—2,460 acres submerged; 3,200 acres purchased—		
2,000 acres of hay land and improvements at \$30-----	\$60,000	
1,200 acres pasture at \$15-----	18,000	
Miscellaneous damages-----	5,000	
<hr/>		
Total lands and damages-----		\$83,000
Total cost of storage-----		\$208,000

On the basis of 40,000 acre feet net annual supply, the cost of storage would be \$5.20 per acre foot.

#### WEST VALLEY RESERVOIR SITE.

In 1904-05 the run-off past the West Valley reservoir site was 17,100 acre feet. The normal annual run-off probably amounts to 19,000 acre feet, as 1904-05 was about 10 per cent below normal for streams tributary to the upper Pit which are fed largely by springs. Recently Tule Marsh has been converted into a reservoir and additional drainage from some 50 square miles on upper Cedar Creek diverted into it. This water is carried to Madeline Plains, where it is used for irrigation of lands in the vicinity of Madeline. It is probable this development has withdrawn about 7,000 acre feet from the drainage tributary to West Valley.

A storage development of 12,000 to 15,000 acre feet in West Valley, where the land values destroyed and the construction costs would be comparable with those of Jess Valley, making the unit cost of storage fully three times as high, would certainly not be practicable. It is better to divert upper Parsnip Creek, a tributary of West Valley Creek, into Jess Valley Reservoir, and make that development as favorable as possible.

### WARM SPRINGS VALLEY RESERVOIR SITE.

**Location and Description.** The Warm Springs Valley Reservoir site is located west of Alturas below the junction of North and South forks of Pit River. The small settlement of Canby is located at the north side of this site. The area that would be submerged by storage consists mostly of a long narrow strip of hay and grain land adjacent to Pit River extending some 10 to 20 miles in length, depending on how large a storage might be developed. The hill slopes at either side of the valley are now used for pasture or dry farming. The average elevation of this reservoir site is about 4,400 feet. The valley area is generally poorly developed agriculturally on account of unsatisfactory water supply conditions.

In 1904 a topographic survey of the reservoir site was made by the United States Reclamation Service. The following table shows the areas that would be flooded and the storage secured at various levels above the stream bed at the damsite:

Height of water level	Area flooded (acres)	Storage capacity (acre-feet)
0 feet -----	0	0
10 feet -----	78	261
20 feet -----	641	3,860
30 feet -----	2,920	21,700
40 feet -----	7,470	73,700
50 feet -----	13,000	176,000
60 feet -----	19,400	338,000
70 feet -----	24,700	559,000

**Water Supply.** The drainage area tributary to this site includes about 1,500 square miles, about one-fourth of which comprises a portion of the westerly slope of the Warner Range and the mountains south of Canby. These mountain areas, ranging from 6,000 to 10,000 feet in elevation, receive a precipitation of 18 to 30 inches. Their run-off is of a very dependable character, as the streams are mainly fed by springs which issue from large underground storage. Little of the discharge from these mountain streams, however, reaches Pit River at Canby during late spring or summer, as practically the entire flow at such times is used for irrigation on lands higher up on the Pit and its

tributaries. The other part of the drainage area, consisting of valley and plateau, lies at elevations from 4,300 to 6,000 feet, and probably the annual precipitation on these areas is not more than 13 to 18 inches. The run-off ordinarily is relatively small and not dependable, while in dry years it is liable to fail completely.

Records of run-off on Pit River near Canby were made during 1904-05, a period too short to indicate directly the mean discharge of this flashy stream. By comparing this record with that of the Pit below Bieber, where a gaging station was maintained for a longer time, and where a reasonable relationship with the annual discharge on the Sacramento at Red Bluff has been established, by analogy a similar estimate or assumption of discharge at Canby for a long period can also be made. A comparison of the flows on the Pit at Canby and at Bieber during the only period of actual measured record is as follows:

Run-off in Acre Feet.

	Pit at Canby (1)	Pit at Bieber (2)	Ratio of flow (1 to 2)
1904-January to September-----	665,000	1,210,000	55%
1904-05-----	165,000	303,000	54%
1905-October to December-----	15,600	29,300	53%
Entire period-----	846,000	1,540,000	55%

The close agreement of the relative discharge at these two stations for these two years, the first of which furnished an excessive run-off and the second about 70 per cent of normal, although probably largely accidental, does to some degree justify the only conclusion possible on the data at hand, viz. that the flow of the Pit at Canby probably is about one-half of that at Bieber. Likewise the drainage area above Canby is approximately one-half that above Bieber.

It has been determined that the annual discharge of the Pit at Bieber varies from 2.4 to 8.8 per cent of that of the Sacramento at Red Bluff, the lower percentage corresponding with years of low run-off on the Sacramento. Such a relationship seems reasonable, for the great flat plateau area tributary to the upper Pit has a very great variation in run-off in wet and dry years, while the large perennial spring-fed streams which begin with Fall River and end with the McCloud contribute an extremely well sustained flow at all times to the Sacramento.

The following tabulation shows the probable run-off on the Pit at Canby during the past 19 years:

	Estimated run-off, Pit at Bleher, in acre feet	Estimated run-off, Pit at Canby, in acre feet
1895-96 -----	<sup>1</sup> 470,000	<sup>1</sup> 258,000
1896-97 -----	<sup>1</sup> 404,000	<sup>1</sup> 222,000
1897-98 -----	<sup>1</sup> 60,000	<sup>1</sup> 33,000
1898-99 -----	<sup>1</sup> 87,000	<sup>1</sup> 48,000
1899-1900 -----	<sup>1</sup> 213,000	<sup>1</sup> 117,000
1900-01 -----	<sup>1</sup> 239,000	<sup>1</sup> 131,000
1901-02 -----	<sup>1</sup> 497,000	<sup>1</sup> 273,000
1902-03 -----	<sup>1</sup> 302,000	<sup>1</sup> 166,000
1903-04 -----	<sup>2</sup> 1,400,000	<sup>2</sup> 770,000
1904-05 -----	<sup>3</sup> 303,000	<sup>3</sup> 165,000
1905-06 -----	<sup>3</sup> 755,000	<sup>3</sup> 415,000
1906-07 -----	<sup>3</sup> 1,110,000	<sup>3</sup> 610,000
1907-08 -----	<sup>3</sup> 187,000	<sup>3</sup> 103,000
1908-09 -----	<sup>3</sup> 858,000	<sup>3</sup> 472,000
1909-10 -----	<sup>3</sup> 241,000	<sup>3</sup> 133,000
1910-11 -----	<sup>3</sup> 337,000	<sup>3</sup> 185,000
1911-12 -----	<sup>3</sup> 102,000	<sup>3</sup> 56,000
1912-13 -----	<sup>3</sup> 103,000	<sup>3</sup> 57,000
1913-14 -----	<sup>4</sup> 617,000	<sup>3</sup> 340,000
Average for 19 years -----	436,000	240,000

NOTE.—In compiling the above table advantage has been taken of additional data available since the publication of the Iron Canyon project report of 1914.

<sup>1</sup>Estimated.

<sup>2</sup>Partly estimated.

<sup>3</sup>Actual record.

<sup>4</sup>Mostly actual record.

Should Warm Springs Valley be used as a reservoir site there probably would be not more than 25,000 to 30,000 acre feet of storage developed for lands above. With allowance for return waters the net reduction in run-off would be about 20,000 acre feet. In addition, at least 5,000 acre feet of the stream flow is now used in Big Valley above and below Lookout for irrigation in early spring. It would, therefore, probably be safe to use this nineteen-year record of discharge of the Pit at Canby as a basis for determining the supplies available for storage, only after having reduced the gross run-off of each year to the extent of 25,000 acre feet.

In examining the nineteen-year record it will be observed that there were two dry periods of two years each when it would have been necessary to draw on the storage previously accumulated to provide for a net water supply of 45,000 to 50,000 acre feet, the amount which

may be obtained from Round Valley. Considering these two dry periods and the year preceding each we have:

	Gross run-off on Pit at Canby	Reduction due to other appropriations	Net run-off available for storage
1896-97 -----	222,000	25,000	197,000
1897-98 -----	33,000	25,000	8,000
1898-99 -----	48,000	25,000	23,000
Totals -----	303,000	75,000	228,000
Average -----	101,000	25,000	76,000
1910-11 -----	185,000	25,000	160,000
1911-12 -----	56,000	25,000	31,000
1912-13 -----	57,000	25,000	32,000
Totals -----	298,000	75,000	223,000
Average -----	96,000	25,000	77,700

Under conditions of the first dry period of 1897-99 it would be possible to obtain a net annual yield of 45,000 acre feet by using the surplus from 1896-97. The average water surface would be about 8,000 acres in area, and with an annual evaporation and seepage loss amounting to about 3.75 feet depth annually over the water surface, approximately 90,000 acre feet, or over one-third of the entire water supply, would be lost in evaporation and seepage. The maximum area flooded, at the beginning of the irrigation season of 1896-97, would be 12,000 acres. For the second dry period of 1911-13 a net annual yield of 50,000 acre feet could be obtained by holding all surplus storage from 1910-11. The average area flooded would be 7,000 acres, the maximum 11,500 acres. In this case about 80,000 acre feet, or over one-third of the total water supply would be lost in evaporation and seepage. It appears, therefore, that to secure a safe net annual yield of 45,000 to 50,000 acre feet it will be necessary to provide a storage of about 150,000 acre feet, flooding 12,000 acres of land.

By providing a larger storage capacity and flooding a larger area, carrying over storage from two or three preceding years, a greater yield can be obtained. The available supply of the four years 1895-96 to 1898-99 is as follows:

	Gross run-off	Reduction due to other appropriations	Net run-off available for storage
1895-96 -----	258,000	25,000	233,000
1896-97 -----	222,000	25,000	197,000
1897-98 -----	33,000	25,000	8,000
1898-99 -----	48,000	25,000	23,000
Totals -----	561,000	100,000	461,000
Average -----	138,000	25,000	115,000

An average water surface of 11,500 acres would dispose of about 172,000 acre feet, or over one-third of the total supply and the safe annual yield would be about 70,000 acre feet. For such a storage a basin of 300,000 acre feet flooding 18,000 acres would be required.

Assuming, as a favorable condition, that at the beginning of the irrigation season of 1894-95, 300,000 acre feet of a full storage capacity of 350,000 acre feet remained on hand, the supplies available would be:

Storage at beginning of irrigation season run-off	Acre feet
1894-95 -----	300,000
1895-96 -----	233,000
1896-97 -----	197,000
1897-98 -----	8,000
1898-99 -----	23,000
Total -----	761,000

Fully one-third of this supply would be lost in evaporation and seepage from an average water area of 15,000 to 16,000 acres, leaving only about 500,000 acre feet, or an annual net yield of 100,000 acre feet available for use. The maximum area flooded would be 20,000 acres.

That the conditions depicted for the above period are not unusually severe may be shown by an analysis of the period of 1908-09 to 1912-13 in which the supplies available were as follows:

	Run-off, acre feet	Run-off less 25,000 acre feet appro- priated, acre feet
1908-09 -----	472,000	447,000
1909-10 -----	133,000	103,000
1910-11 -----	185,000	160,000
1911-12 -----	56,000	31,000
1912-13 -----	57,000	32,000
Totals -----	903,000	778,000
Average -----	181,000	156,000

In this period an average evaporating surface of 16,000 acres would have disposed of 275,000 acre feet, or over one-third of the total available storage, leaving a total of 500,000 or 100,000 acre feet per year. The maximum area flooded would be 21,000 acres and a storage capacity of 400,000 acre feet would be required. The conditions of this period are, therefore, even more severe than in 1894 to 1899.

While it is probable that by carrying over storage for six to eight years a yield slightly in excess of 100,000 acre feet, possibly as much as 125,000 acre feet, might be developed by submerging a much greater

area, such a scheme would be entirely impractical. Any storage materially in excess of 400,000 acre feet would interfere seriously with drainage from South Fork and North Fork valleys, and might even require a flooding of Alturas. As it is quite evident that the cost of any storage in Warm Springs Valley is prohibitive on account of the value of the lands that would be flooded, it appears unnecessary to consider a development above 100,000, which would introduce additional serious complications. The storage possibilities may be summarized as follows:

	Acre-feet	Total storage capacity required, acre feet	Area submerged, acres
Safe annual yield -----	45,000	150,000	12,000
Safe annual yield -----	70,000	300,000	18,000
Safe annual yield -----	100,000	400,000	21,000

While the above analysis is at best but a rough approximation it indicates clearly what great losses would occur in evaporation and seepage and the large areas that it would be necessary to submerge in securing a safe annual supply of 45,000 to 100,000 acre feet.

**Damsite.** The Warm Springs Valley damsite is located about four miles southwest of Canby. At this place the Pit flows through a narrow gorge about 200 feet wide. The hills at either side consist of well exposed massive basaltic lava rock, and as this formation extends to the edge of the river bottom at both sides there seems every probability that bedrock would be found at a depth not exceeding 20 feet. The site would probably be suitable for a masonry dam, but the transportation of cement by rail and team would probably make such a structure prohibitive in cost.

**Construction Details.** A quarry can be opened at the site. All rock excavated for a wasteway channel could be used in the rock fill. Earth can be obtained for the earth facing with one-half mile haul. At several places in Warm Springs Valley good wash gravel suitable for concrete is found.

Such equipment, supplies, etc., which would be shipped could be delivered at Alturas, a station on the Northern California and Oregon Railway about 25 miles to the east. There is a fairly good road free from heavy grades from Alturas to the damsite.

#### Estimates of Cost.

These are given for reservoirs of three different capacities, as follows:

Net annual yield -----	45,000 acre feet.
Storage capacity -----	150,000 acre feet.
Area submerged -----	12,000 acres.
Area necessary to purchase -----	16,000 acres.
Height of dam -----	60 feet.
Depth of water at dam -----	48 feet.

Excavation—		
Wet, 40,000 cubic yards at \$1.50	-----	\$60,000
Dry, 10,000 cubic yards at \$1.00	-----	10,000
Embankment—		
Rock fill, 48,000 cubic yards at \$1.50	-----	72,000
Earth, 35,000 cubic yards at 60 cents	-----	18,000
Riprap, 2,500 cubic yards at \$3.00	-----	7,500
Outlet conduit, 230 linear feet at \$20.00	-----	4,600
Gate tower and gates	-----	5,000
Miscellaneous, bridge and road	-----	7,500
Total cost of construction	-----	\$184,600
Engineering and contingencies at 25 per cent	-----	46,150
Total	-----	\$230,750
Lands and damages—		
3,000 acres at \$40	-----	\$120,000
7,000 acres at \$30	-----	210,000
6,000 acres at \$15	-----	90,000
Damages	-----	10,000
Total	-----	\$660,750

For 45,000 acre feet net annual supply the cost per acre foot of storage is \$14.67.

Net annual yield	-----	70,000 acre feet.
Storage capacity	-----	300,000 acre feet.
Area submerged	-----	18,000 acres.
Area necessary to purchase	-----	25,000 acres.
Height of dam	-----	70 feet.
Depth of water at dam	-----	58 feet.
Excavations—		
Wet, 46,000 cubic yards at \$1.50	-----	\$69,000
Dry, 12,000 cubic yards at \$1.00	-----	12,000
Embankment—		
Rock fill, 80,000 cubic yards at \$1.50	-----	120,000
Earth, 50,000 cubic yards at 60 cents	-----	30,000
Riprap, 4,500 cubic yards at \$3	-----	13,500
Outlet conduit, 300 feet at \$20	-----	6,000
Gate tower and gates	-----	7,500
Miscellaneous, bridges and road	-----	7,000
Total cost of construction	-----	\$266,000
Engineering and contingencies at 25 per cent	-----	66,500
Total	-----	\$332,500
Lands and damages—		
5,000 acres bottom land at \$40	-----	\$200,000
10,000 acres grain land at \$30	-----	300,000
10,000 acres pasture land at \$15	-----	150,000
Miscellaneous damages	-----	15,000
Total	-----	\$997,500

For 70,000 acre feet net annual supply the cost per acre foot is \$14.25.

Net annual yield.....	100,000 acre feet.
Storage capacity .....	400,000 acre feet.
Area submerged .....	21,000 acres.
Area necessary to purchase.....	28,000 acres.
Height of dam.....	75 feet.
Depth of water at dam.....	63 feet.
Excavation—	
Wet, 50,000 cubic yards at \$1.50.....	\$75,000
Dry, 13,000 cubic yards at \$1.....	13,000
Embankment—	
Rock fill, 160,000 cubic yards at \$1.50.....	150,000
Earth, 70,000 cubic yards at 60 cents.....	42,000
Rip-rap, 6,000 cubic yards at \$3.....	18,000
Outlet conduit, 325 feet at \$20.....	75,000
Gate tower and gates.....	10,000
Miscellaneous, bridge and road.....	7,500
<hr/>	
Total cost of construction.....	\$390,500
Engineering and contingencies at 25 per cent.....	97,600
<hr/>	
Total .....	\$488,100
Lands and damages—	
5,500 acres bottom land at \$40.....	\$220,000
10,500 acres grain land at \$30.....	315,000
17,000 acres pasture land at \$15.....	255,000
Miscellaneous damages .....	25,000
<hr/>	
Total .....	\$815,000
<hr/>	
Total .....	\$1,303,100

On the basis of 100,000 acre feet net annual supply the cost per acre foot would be about \$13.03.

## ROUND VALLEY RESERVOIR SITE.

**Location and Description.** The Round Valley Reservoir Site is on Ash Creek, below Rush Creek, a tributary which enters from the northeast. The town of Adin, at the eastern edge of Big Valley, is less than one-half mile below the damsite.

The average elevation of this reservoir site is 4,200 feet. It consists of about 2,700 acres of grain, meadow and pasture land. Practically the entire area is in private ownership. A topographic survey of this reservoir site was made by the United States Reclamation Service in 1904, showing the areas that would be flooded and the storage that

would be impounded at various heights above the stream channel at the damsite as follows:

Height of water level	Area in acres	Total capacity in acre feet
0 feet -----	0	0
10 feet -----	65	218
20 feet -----	304	2,060
30 feet -----	528	6,220
40 feet -----	918	13,500
50 feet -----	1,430	25,200
60 feet -----	2,060	42,700
70 feet -----	2,860	67,300
80 feet -----	3,560	99,400

**Water Supply.** The drainage area is 265 square miles, ranging from 4,300 feet to 7,100 feet in elevation, over which annual precipitation is about 14 to 24 inches.

In the portion of 1904 from March 13th to September 30th the total estimated run-off was 102,000 acre feet, as compared with 55,600 for the entire year 1904-1905. The relative fluctuation is much greater than on the head of the South Fork at Jess Valley, and at the same time very much less than on the Pit at Bieber for the same period. The flow on these streams was as follows:

	March 13 to September 30, 1904 (1)	1904-05 (2)	Ratio (1) to (2)
Pit at Bieber-----	839,000	303,000	1 to 2.8
South Fork Pit at Jess Valley-----	55,000	42,800	1 to 1.3
Ash Creek at Adin-----	102,000	55,600	1 to 1.8

The flow of the Pit at Bieber was probably 30 per cent below normal in 1904-1905; that on South Fork of Pit at Jess Valley was about 10 per cent below normal. By analogy it has been deduced that the run-off of Ash Creek in 1904-1905 would be about 15 per cent below normal, the latter therefore being about 65,000 acre feet. All indications point to the probability that yields of less than 50,000 acre feet may be expected in years of drouth.

The seasonal period of greatest discharge in Ash Creek is from February to May, preceeding almost entirely the full irrigation season, consequently only a relatively small portion of the run-off is utilized under present conditions. In the season of 1904-1905 there was less than 10,000 acre feet discharge from May to September, inclusive, and it is safe to assume that this amount fully covers all appropriations for irrigation, leaving 55,000 acre feet run-off available for storage.

With a surplus storage of about 12,000 acre feet held in reserve for a single dry year, the average water surface would be about 2,000 acres. Evaporation and seepage losses of four feet annual depth would reduce the gross storage 8,000 acre feet, leaving 47,000 acre feet available for use, or enough to irrigate 23,500 acres of land on a basis of two acre feet per acre.

**Damsite.** The damsite is at the west side of Round Valley at the outlet gorge through which Ash Creek flows into Big Valley. This gorge is only 200 feet in width at the damsite. The hills are well rounded with a capping of basaltic lava, especially at the southwest. It is concluded on the basis of numerous exposed sections of the rock formation that these basaltic lava flows are in very thin sheets, at places not over a foot or two in thickness, and that the underlying formation is mostly tuff.

At the center of the damsite a test pit was sunk to a depth of 15 feet through impervious blue and yellow clay. Under the clay coarse gravel was found, and the very free flow of water from this formation prevented further progress of excavation without pumping, which was not attempted. There is, therefore, no information as to the depth bedrock or other satisfactory foundation might be found at this site, nor what the character of the foundations may be. The general configuration of the abutting hills and the narrow gorge have led to the conclusion that bedrock lies at moderate depth, perhaps not more than 20 to 30 feet below the surface. In view of the fact that lava rock appears to be superficial and apparently is invariably underlaid by tuff, particularly at the abutments, there is every prospect that the "bedrock" at this site is tuff.

**Construction Details.** An earth dam seems to be the most practicable structure for this site on account of the scarcity of other material. An ample amount of good embankment earth can be obtained in the valley floor above the damsite. In the absence of definite information as to substratum it is assumed that a satisfactory cut-off wall could be secured at an average depth not exceeding 50 feet below the ground surface. A concrete gate tower and outlet conduct of 300 second feet capacity, and a masonry lined wasteway capable of delivering a flow possibly as large as 10,000 second feet should be provided. As it is proposed to provide storage for 67,000 acre feet a dam 80 feet high would be required. The yardage in the embankment is sufficiently large to warrant an estimate of 50 cents per cubic yard for earth fill as used at Jess Valley. An upstream slope of 3 horizontal to 1 vertical, downstream slope of 2 horizontal to 1 vertical and top width of 20 feet is proposed, with the top of dam 10 feet above high water. The upstream slope of the dam would require a riprap facing about 15

inches in thickness. Gravel for concrete can be obtained from Butte Creek, one mile south of Adin, with a haul of  $1\frac{1}{2}$  miles.

All equipment and materials shipped in would probably be delivered from Madeline, on the Nevada-California-Oregon Railroad, 35 miles southeast of Adin, although with an improved road over Big Valley Mountain freight might be delivered cheaper from Bartle, the terminus of the McCloud River Railway, 70 miles west of Adin. The haul from either place would be expensive.

#### Estimate of Cost.

Stripping damsite, 8,000 cubic yards at 25 cents-----	\$2,000
Cut-off trench—	
Excavation, wet, 6,000 cubic yards at \$3-----	18,000
Excavation, dry, 2,000 cubic yards at \$1-----	2,000
Clay puddle, 8,000 cubic yards at \$1-----	8,000
Earth embankment, 175,000 cubic yards at 50 cents-----	\$7,500
Riprap, 6,000 cubic yards at \$3-----	18,000
Concrete lined outlet conduit, 375 lineal feet at \$20-----	7,500
Gate tower and gates-----	7,500
Wasteway—	
Excavation, 10,000 cubic yards at 75 cents-----	7,500
Masonry, 1,000 cubic yards at \$10-----	10,000
New roads, etc.-----	4,000
Total cost of construction-----	\$172,000
Engineering and contingencies at 25 per cent-----	43,000
Total -----	\$215,000
Lands and damages—	
2,860 acres submerged.	
4,000 acres purchased.	
2,000 acres grain and meadow land and improvements at \$40--	\$80,000
2,000 acres pasture and hill land at \$15-----	30,000
Miscellaneous damages -----	10,000
Total lands and damages-----	120,000
Total cost construction, lands and damages-----	\$335,000
On the basis of 47,000 acre feet annual net supply the cost of storage would be \$7.13 per acre foot.	

#### BIG VALLEY RESERVOIR.

In the report on the Iron Canyon project previously referred to Big Valley reservoir site has been shown to be unsuitable for large storage for use in the Sacramento Valley. It is likewise impracticable for use for the development of small storage, even should there be found lands along Pit River below this site on which a supply from it could be utilized. For instance, 6,000 acres would be submerged to impound 20,000 acre feet, whereas the same supply could be stored with far less loss in evaporation and at a much less cost by flooding only about 900 acres in Little Valley, just below Dixie Valley, on Horse Creek. Further discussion of this point is needless.

## MISCELLANEOUS STORAGE SITES.

**Introductory.** Many small storage sites were examined to determine possibilities for developing small supplies. Some of these sites, such as Delta Lake and those on Pit River above Lookout, and on Willow Creek, were strongly recommended by various persons and only for that reason are they commented on herein. It was evident at once that lack of drainage area rendered the Delta Lake site valueless, and the expense of constructing dams in Pit River between Big Valley and Warm Springs Valley for small storage made any development of that kind impracticable, as shown in detailed report following. Other sites are even less important.

**Delta Lake.** Six miles northwest of Likely, on the plateau at 5,500 feet elevation, are two small bodies of water, the larger of which is called Delta Lake. As the lake occupies a depressed basin it has been proposed to drive a tunnel some 1,500 feet in length through basaltic lava rock to secure a water supply from the lake for lands in South Fork Valley. A canal to carry this water some miles over the plateau to reach lands within five miles of Alturas has also been considered.

When Delta Lake was visited in October, 1914, the water surface covered about 100 acres. As 1913-14 was a year of fairly large run-off for the bench lands, it may be considered that about 150 acres represents at least the average lake area. The maximum area would be about 200 acres as indicated by high water marks. It appears very probable that at high water stages there may be considerable loss from seepage through the porous basaltic lava slopes at the north.

The drainage area consists of not over three square miles of almost barren hill lands 5,500 to 6,000 feet in elevation, on which precipitation probably does not exceed 14 to 15 inches. The precise yield of the watershed can not of course be determined but, except for such seepage losses as may occur, and which can not be recovered, the run-off is balanced by the evaporation on the pond, probably not more than three feet in depth over an average area of 150 acres, or about 450 acre feet annually. At least 150 acre feet would in any event be lost in evaporation before the remaining 300 acre feet could be collected and used for irrigation. To drive 1,500 feet of tunnel at an expense of at least \$10 per foot, or \$15,000 total, to secure 300 acre feet at a cost of \$50 per acre foot for storage alone does not need discussion.

It has also been proposed to divert some of the drainage tributary to Crooks Canyon into this basin. Apparently there is an opportunity to store water directly in a reservoir in Crooks Canyon in a basin fully as impervious as that of Delta Lake, hence it would be entirely impractical to make expensive diversions to carry water from Crooks Canyon into Delta Lake and thereafter drive a tunnel into the lake to obtain

the stored supplies. This lake is not of any practical value for the development of a water supply of material amount.

**Crooks Canyon.** Crooks Canyon is about 6 miles northwest of Likely. The drainage tributary to this canyon is about 45 square miles of plateau and mountain area ranging from 5,000 to 7,000 feet elevation. The damsite is about one-half mile northeast of Delta Lake.

The higher slopes of the drainage area are fairly well timbered while the bench lands are a rocky prairie. The annual precipitation over the area ranges from 14 to 18 inches. In ordinary years a run-off of about 8,000 acre feet might be furnished by this watershed, but in dry years probably not more than 2,000 acre feet.

**Big Sage.** The very flat adobe capped plateau area northwest of Alturas tributary to Rattlesnake Creek is known as Big Sage. The elevation of this area ranges from 5,000 to 5,500 feet. The sole vegetation over these bench lands consists of sagebrush and patches of scattering juniper. Only a very small portion of the area has agricultural value on account of the large quantity of loose rock which covers a large proportion of the surface.

Over this drainage area of about 110 square miles the average precipitation is probably about 15 inches. In summer all rainfall, except when very heavy thunder storms or cloudbursts occur, is absorbed by the adobe and evaporated. Even in winter most of the precipitation is absorbed and retained until evaporated. Unless climatic conditions are such as to cause a rapid melting of the snow in spring a very small run-off results. The extreme unreliability of run-off from this type of drainage area even in normal years, and the certainty of failure in dry years, which seem to occur about every fifth year, appear to place a dependable development at this place out of the question.

The only available reservoir site is likewise unfavorable, the surface area being very large so that serious losses by evaporation and seepage may be expected. The wide shallow outlet from the basin would moreover require a dam about 500 feet in length and 30 to 50 feet high.

It is quite certain that a storage project here would not prove dependable for more than 5,000 to 10,000 acre feet during four years out of five, and that complete failure in supply might be expected about every fifth year. With several dry years in succession, as have occurred twice in the past twenty years, the failure of water supply would result in great loss to lands depending on it. In the light of our present knowledge it is not believed that this supply would warrant the expense of its development.

**Sites on Pit River Between Warm Springs and Big Valley.** The section of Pit River between Warm Springs Valley and Big Valley lies generally in a narrow, rocky gorge, along which there are no flat

valleys at river level. Stone Coal Valley lies 50 feet or more above the river and the valley below Stone Coal has a fairly steep grade and does not offer a favorable opportunity to develop storage. At both of these valleys dams of excessive height and expense would be required. No other points offer prospect of economical storage. Plans to build a number of low dams about 30 feet high in the ordinary river channel below such small open sections of the river as may be found have been discussed, and appear attractive as regards low value of lands destroyed, but the total expense of such dams would render the cost of such storage utterly out of the question.

**Widow Valley.** Widow Valley is about six miles southwest of Lookout, at the base of the highest peak of Big Valley Mountain. The 17 square miles of drainage area is heavily timbered, indicating an average precipitation of about 24 inches. The valley consists of a very narrow strip of meadow land about 600 acres in area. One-half mile above the lower end of the valley a low earthen dam or levee averaging 25 feet in height and 1,200 feet long might be constructed and a storage of 3,000 to 5,000 acre feet secured. While this project has the disadvantage of flooding 500 acres, an area relatively large for the storage secured, it is deserving of some consideration on account of the fact that it is well located near high irrigable areas at the west side of Big Valley, to which it would be difficult to deliver water from any other source.

**Willow Creek.** Willow Creek flows from the hills at the southeast of Big Valley and joins Ash Creek about 7 miles west of Adin. Before reaching the valley the creek has a steep grade and no open flat areas are found along its course. Two of the possible reservoir sites that had been urged for consideration by some local residents as most favorable were visited. Dams 75 to 100 feet high, costing possibly from \$200,000 to \$300,000, would enable the flooding of about 100 to 200 acres of land to an average depth of 30 to 50 feet. This would only furnish in each instance storage considerably less than 1,000 acre feet, which would cost as much as \$300 per acre foot or \$600 per acre irrigated. These approximate costs are submitted to indicate the impracticability of storage at such sites.

**Ash Creek Valley.** Storage in Ash Creek Valley, an extremely flat basin 12 miles southeast of Adin, with a damsite on Ash Creek below its junction with Cottonwood Creek, might be developed. Nearly two-thirds of the water supply tributary to Ash Creek at Adin is furnished by the drainage area tributary to the Ash Creek Valley site. Probably about 30,000 acre feet of unappropriated supply might be obtained annually by storage at this place.

As the cost of storage works and lands damaged would amount to nearly as large a total cost as at Round Valley, where a net storage

yield of about 47,000 acre feet may be secured, the cost per acre foot of storage at this site would probably be fully 50 per cent greater than at Round Valley. There would, therefore, be a decided disadvantage in cost for storage at Ash Creek Valley, as compared with Round Valley and hence this site has not been further considered.

**Dixie Valley.** This valley is at the head of Horse Creek about 16 miles south of Bieber. It consists of 1,200 acres of meadow and some 3,000 acres of border land that has possible agricultural value. The valley receives drainage from about 175 square miles of watershed ranging from 5,000 to 6,000 feet in elevation. The well timbered mountain area at the south of the valley receives about 24 inches of precipitation, while the lower portions of the basin probably receive 18 inches. In the absence of definite data as to stream flow it may be assumed that fully 25,000 acre feet of storage might be impounded in this valley.

The damsite at the outlet of Dixie Valley is less than 100 feet in width. The formation is basaltic lava rock, and on account of the very flat slope of the valley a dam of less than 50 feet in height probably would be sufficient to impound the entire run-off. This appears to be a very favorable storage proposition, but unfortunately there are very few irrigable lands below it in need of an additional supply, hence it may be considered infeasible.

**Little Valley.** This valley is on Horse Creek about one mile below Dixie Valley. On the topographic maps of the U. S. Geological Survey it is shown as Ash Creek Valley. The drainage tributary to this valley is about 198 square miles. The valley floor is about 900 acres in area. An apparently favorable damsite about 100 feet in width is found at the valley outlet. On account of the very flat grade of this valley a dam 70 to 100 feet in height would probably be sufficient to impound the average run-off, amounting to approximately 30,000 acre feet. Due to lack of tributary irrigable lands, this storage site may be classed as infeasible.

**Great Spring on Hat Creek.** At Great Spring on upper Flat Creek, about 20 miles above Cassel, there is a fair reservoir site. The damsite is immediately below Great Spring, where the creek passes between high basaltic walls about 250 feet apart. The site seems well adapted for a rock-fill earthen dam, although it is uncertain how deep bedrock would be found below the creek bed. The valley above rises quite rapidly, and it probably would be necessary to build a dam fully 75 to 100 feet high to secure a storage capacity of 50,000 to 75,000 acre feet. It does not appear that storage at this place is liable to be required for any purpose.

## **SUMMARY OF STORAGE POSSIBILITIES.**

Of the reservoir sites considered Jess Valley and Round Valley are the only ones that stand out conspicuously as favorable for development on a considerable scale. The cost of development is comparatively low, the areas submerged in the basins are small and the valleys are well located to irrigate tributary lands.

At Warm Springs Valley the cost of storage is high and the areas flooded are large. The smaller sites considered are generally impracticable for various reasons mentioned in the detail discussion or are of such small yield that they can be considered only for the irrigation of very minor areas.

The sites at Dixie and Little Valleys are favorable from the water supply and construction standpoints, but due to lack of irrigable lands below them there appears no necessity for development. Likewise the site on Hat Creek at Great Spring, although favorable, is of little present utility for irrigation.

---

## **AREAS IRRIGABLE BY NATURAL OR UNREGULATED STREAM FLOW.**

---

### **FALL RIVER VALLEY.**

The complete reclamation of an additional 10,000 acres of swamp land in Fall River Valley will probably continue along the lines of levee construction and drainage described in the section on "Principal Irrigation Works" under "Fall River Valley" in the chapter on "Present Appropriations and Uses of Water." An abundant irrigation supply is available from Fall River and its tributaries.

The extension of irrigation in Fall River Valley by pumping with lifts of from 10 to 25 feet involves no problems of water supply. With the completion of the power plant of several hundred horsepower at Fall River Mills and the extension of transmission lines to the various parts of the valley, all of which were under construction in 1914, electric power as well as that produced by steam or gasoline or other oils will be available for pumping.

In addition to supplies from Fall River and from springs feeding Fall River, artesian conditions are indicated by several wells drilled to a depth of about 400 feet at the north of McArthur and Pitville. The yields are from 0.1 to 0.3 second feet. The formations encountered are largely sands and clays, with gravel or rock at the bottom. One of these wells is two miles north of McArthur on the McArthur ranch, the other being three miles northeast of McArthur on the ranch of Dennis

Sesnoy. Other wells with small artesian flow have been obtained by drilling along the south border of Fall River Valley in the vicinity of Pitville.

### **HAT CREEK VALLEY.**

Along Hat Creek from Great Spring to Carbon about 4,500 acres of irrigable land remain unirrigated. When these lands are cleared of timber, diversions can easily be made from Hat Creek, which has a steep grade and an ample supply.

### **BENCH LANDS SOUTHWEST OF CASSEL.**

On the bench about three miles southwest of Cassel, largely on the north side of the road from Hat Creek west to Burney, there is an area of about 5,000 acres of timber land, of which about 4,000 acres, when cleared, may prove suitable for irrigation development.

A canal heading from Hat Creek about five miles upstream from the above described area should have sufficient grade to deliver water to the south or higher side. Should the supply of Hat Creek be deficient, water from Loss Creek can be carried to Hat Creek by a canal about two miles in length. The main canal from Hat Creek probably would cost \$10 per acre irrigated and should it be necessary to carry a supplementary supply from Loss Creek to Hat Creek, the cost would probably be increased to \$15 per acre. The expense of distributing laterals is assumed at \$7.50 per acre, making the total cost \$17.50 to \$22.50 per acre for main canal and distribution.

### **BENCH LANDS WEST OF CASSEL AND LANDS IN BURNEY VALLEY.**

On the bench west of Cassel, and in Burney Valley there is a total gross area of 15,000 acres, of which about 10,000 acres appear suitable for or warrant irrigation development. These lands are now timbered, about three-fourths of the entire area being in private ownership. An examination of the public lands by the United States Forest Service indicated that soil conditions were satisfactory for irrigation development, but that temporarily the lands were chiefly of value for timber. Hat Creek is the only source of supply for the irrigation of these lands, as Burney Creek water is entirely appropriated.

The main canal for the irrigation of the greater part of this area would head about one-half mile above Cassel, following generally for the first three miles the location of the Braden ditch, which was started as a large canal to irrigate much of the area under consideration. About four and one-half miles west of Cassel it would be necessary to build the canal around the north end of a high lava dike. The total net irrigable area below or north of this main canal probably amounts to about 7,500 acres. A large portion of the canal would be located on

the side hill in rather difficult excavation. The total length would be about 12 miles. Including structures it would cost about \$15.00 per acre irrigated.

The distribution system would require one or two important laterals to the northwest to reach bench areas isolated by lava dikes. The cost of this system is approximated at \$10 per acre, making the total cost of irrigation works about \$25 per acre.

To reach lands in Burney Valley which are south of the above-described main canal, it would be necessary to extend the canal previously described as heading some seven miles about Cassel for the irrigation of the 5,000 acre tract three miles southwest of Cassel. While it appears that this canal can be extended to the west so as to cross the lava flow east of Burney, no surveys have been made to determine how expensive such a project might be, but indications are that the cost would be high. The net area east of the lava dike that may be irrigated by this canal would probably not exceed 2,500 acres.

#### **SUMMARY OF PROPOSED DIVERSIONS FROM HAT CREEK.**

The amount of water diverted for irrigation in Hat Creek Valley probably totals two and one-half feet depth in a season. After making allowance for return flows, it is estimated that the net use of water for the 21,000 acres of irrigable lands which can be supplied from Hat Creek will not exceed about 200 second feet for four to five months of the year.

#### **MISCELLANEOUS AREAS.**

In the estimates herein given of areas possible of irrigation in the Pit Basin account has been taken of a number of small projects where in individual cases areas ranging from a few hundred up to possibly 1,000 or more acres can be developed by means of small storage or by new canals. No attempt is made herein, however, to specify such small projects in detail.

## AREAS IRRIGABLE UNDER STORAGE RESERVOIRS.

### UNDER JESS VALLEY RESERVOIR.

**Location and Description.** In South Fork and Warm Springs valleys, and in the immediate vicinity of Alturas, there is a total irrigable area of about 46,000 acres, of which about 40,000 acres is suitably located and adapted for irrigation from storage at Jess Valley. About one-half of this area is now supplied with water from the natural stream flow, supplemented with a small amount of storage; the other half is entirely without a supply.

The irrigated lands consist mostly of the valley bottoms which lie close to the level of the stream courses. These lands have an abundant water supply in May and early June, but their supply is generally deficient by the middle of June. As previously stated, the amount of water used on these lands averages about two feet in depth in a season, or a total of 40,000 acre feet for the entire area.

The irrigable lands which have no water supply are scattered the entire length of South Fork and Warm Springs valleys, and consist generally of smaller areas at high level along the edge of the valleys. In South Fork Valley the largest area is on the west side within ten miles of Alturas. In Warm Springs Valley lands of this character are found mostly in the lower or west half of the valley.

Present conditions may be summarized as follows:

Locality	Lands suitable for development under Jess Valley storage		
	Irrigable acres	Irrigated acres	Dry acres
South Fork Valley, including lands adjacent to Alturas -----	25,000	18,000	7,000
Warm Springs Valley -----	15,000	2,000	13,000
Totals -----	40,000	20,000	20,000

Two alternative plans of development may be followed in utilizing the storage from Jess Valley. First: Jess Valley storage of 40,000 acre feet may be used exclusively for 20,000 acres of irrigable lands mostly in Warm Springs Valley, now without a water supply; second: Jess Valley storage may be used to so supplement the natural stream flow for the 20,000 acres now irrigated as to furnish a well regulated supply for the full season instead of the unregulated supply that now obtains, with its deficiency in the summer. This will permit of such economies in

use as to enable the additional 20,000 acres of irrigable land now without any supply to be watered as well.

Referring to the first alternative plan, the 20,000 acres not now irrigated comprise a large number of scattered areas located largely at the lower half of both South Fork and Warm Springs valleys and adjacent to Alturas. To supply them it would be necessary to construct four main canals. The two for South Fork Valley and Alturas areas would head about three miles east of Likely, the two for Warm Springs Valley near Alturas. The aggregate length of these canals would be about 150 miles. As they would be located to a considerable extent along the side hill, and areas to be supplied are largely near their ends, the canals would be relatively large and expensive. It is probable that the main canals would cost \$20 to \$25 per acre irrigated. Storage would add \$10.40 per acre. The distributing laterals would cost about \$7 per acre. The total cost of the works would therefore be about \$40 per acre. Such a development is not only unduly expensive, but it would not serve the best interests of the valleys concerned, as it would tend to result in the intensive cultivation of the border lands, which probably as a whole are of less agricultural value than the bottom lands that would remain with a deficient summer water supply.

Referring to the second alternative plan, the expense of storage would be spread over 40,000 acres, the apportionment being presumably prorated according to the priority of water right and the benefit received. The cost per acre for main canals would be much lower under this plan, which would introduce a common system of water supply and distribution and prevent disagreement as to the ownership of water, and is to be greatly preferred over the plan first mentioned. The following description of proposed works refers only to this plan.

No attempt is made herein to outline definitely any district which storage at Jess Valley might serve. So far as possible the flows of Pine Creek, North Fork and Canyon Creek, and storage now developed, or any which may later be developed, on the plateau southwest and northwest of Alturas, should be used on lands that can not be reached by storage from Jess Valley. All advantageous readjustments of water supplies which would serve to bring the greatest area possible under irrigation would readily suggest themselves at the time, should Jess Valley storage be developed.

**Main Canals, South Fork Valley.** A canal heading about 3 miles east of Likely and extending along the base of the plateau, following possibly for much of the distance the present location of the Williams or Corporation ditch, would be carried north at sufficient elevation to cover lands on Pine Creek and possibly some areas at the east and at the north of Alturas. This canal would be approximately 35 miles in length. Much of the excavation would be in cemented material. One

or two flumes or pressure pipes would be required to cross such low places as the Fitzhugh Creek bottoms. Except across Pine Creek lands, the cost of rights of way should be nominal. It is estimated that 10,000 acres would be supplied by this canal. The present east side Corporation ditch heading below Likely might serve a considerable portion of this area to advantage, and thus reduce the size and cost of the proposed main canal above referred to.

The delivery of water to all lands on the west side of South Fork Valley is not so simple. It is probable that these lands could be irrigated most economically by two canals, one heading about 3 miles east of Likely and following for some distance the present high line canal, known as Dukes Ditch, and one heading near Likely. The first canal would extend along the south side of South Fork Valley to a point northwest of Likely. This canal would be about 8 miles in length and would irrigate about 3,000 acres. The second canal, heading near Likely, would extend northwest to the west side of South Fork Valley and continue practically to Pit River, a distance of 30 miles. While the location would be on the side hill for much of the distance, the canal would have the advantage of delivering a large part of its supply to lands near its head, thus permitting of a rapid reduction in section. The cost of right of way would be very low. An area of 12,000 acres would be irrigated under this canal.

**Supply for Warm Springs Valley.** The water supply for lands in Warm Springs Valley would be carried down the South Fork of Pit River, probably in an enlarged channel excavated to improve drainage conditions in South Fork Valley. It would be necessary to make diversions for a north side and a south side canal a short distance below Alturas in order to deliver water to lands in Warm Springs Valley fairly well above the level of the valley bottom, as the lower portion of Warm Springs Valley, like the lower end of South Fork Valley, is of extremely flat grade. The canals through this valley would encounter considerable side-hill excavation in cemented materials. Each canal would be about 35 to 40 miles in length. The north side canal would irrigate about 9,000 acres, and the south side canal about 4,000 acres. Rights of way would generally be low in cost.

**Estimate of Cost of Canals.** The average grade available for all canals would be about two and one-half feet per mile. To this estimate an overhead charge of 25 per cent. has been added for engineering and

contingencies. No surveys have been made as a basis for these estimates. The following is a summary of cost for the main canals:

	Area Irrigated, acres	Length, Miles	Total cost
South Fork Valley—			
East Side Canal.....	10,000	35	\$130,000 00
Upper West Side Canal.....	3,000	10	18,000 00
Lower West Side Canal.....	12,000	30	150,000 00
Warm Springs Valley—			
North Side Canal.....	9,000	40	160,000 00
South Side Canal.....	4,000	35	75,000 00
Totals .....	40,000	145	\$533,000 00

Cost per acre irrigated.....	\$13 50
Allow for structures.....	1 50
Total .....	\$15 00

**Distribution System.** In this system the length of main canals in proportion to the area irrigated is so great and the average width of lands adjacent to these canals so small, that while the main canal charges will be high the expense of laterals should be comparatively low. The latter are estimated at \$7.50 per acre.

**Summary of Costs.** The total expense of the works outlined should be about as follows:

	Total cost	Cost per acre
Storage, 40,000 acre feet.....	\$208,000 00	\$5 20
Main canals, 155 miles.....	600,000 00	15 00
Distribution system, 40,000 acres.....	300,000 00	7 50
Total cost .....	\$1,108,000 00	\$27 70

or, say, an average price of \$28.00. No attempt is made to apportion the charge for new and for old lands. It is presumed that charges for the 20,000 acres now irrigated would be substantially lower than for lands without any water rights.

**Drainage.** While drainage is not properly a charge against irrigation, a considerable portion of the area outlined requires additional drainage before any change from present irrigation and crop conditions can be considered. In South Fork Valley the ground water level is very close to the surface: for much of the valley, practically at the surface. With so high a ground water plane practically no crop but wild hay is possible. To secure a more economical use of water and permit of a higher grade of crops, the water level should be lowered as

much as 6 or 8 feet in portions of the valley bottom. This can be accomplished by means of deep drains, the type and location of which need not be now specified.

In Warm Springs Valley the flow of the Pit frequently exceeds 5,000 second feet. The maximum recorded flow in 1904 was 17,000 second feet. The river has practically no channel capacity and the grade is extremely light, especially in the lower or west half of the valley. It will therefore be very expensive, if not prohibitive in cost, to prevent occasional flooding of some of the lower lands for a few days in spring.

### **UNDER ROUND VALLEY RESERVOIR.**

**Location and Description.** Big Valley has a total agricultural area of 83,000 acres. (See Report of 1912, State Conservation Commission.) The maximum gross area under the highest practicable gravity canals heading from Round Valley Reservoir and extending around Big Valley is about 42,000 acres, excluding about 3,000 acres of lands too high for gravity irrigation. Excluding lands unsuitable for irrigation it is estimated that the net irrigable area is about 30,000 acres. Of this area 15,000 acres is now partly irrigated, the water supply being generally deficient. The remaining 15,000 acres is not irrigated nor is a water supply available without storage development.

The irrigated lands consist mainly of meadow and reclaimed swamp lands along Ash Creek, of meadow lands along Willow Creek, of hay and alfalfa lands along Pit River, a small meadow area along Bull Run Slough, and alfalfa lands under the C. W. Clark Company ditch, east and south of Bieber. This area of 15,000 acres has an average water supply of about 17,000 acre feet, consisting of about 10,000 acre feet from Ash Creek, about 5,000 acre feet from Pit River and about 2,000 acre feet from other sources, chief of which is Willow Creek.

It is suggested that an advantageous utilization of water supply would be to divert all supplies that are of sufficient elevation to irrigable lands along Willow Creek and Pit River above Lookout which are too high to be reached by canals from Round Valley. This amounts to fully 4,000 acre feet and would leave about 13,000 acre feet of natural stream flow, mainly in Ash Creek, for the use of irrigable lands in the district outlined.

A considerable portion of the irrigable lands now without a supply are between Adin and Lookout on the north side of Ash Creek, and the remaining areas are more or less scattered throughout the valley.

Probably the most advantageous use of Round Valley storage would be both as a supplementary supply for the 15,000 acres of land now enjoying only partial irrigation, and for the full irrigation of the 15,000 acres of irrigable land now without any supply. The supply

as developed by storage will be adequate for the 30,000 acres on the basis of 2 acre feet per acre irrigated, as shown below:

Natural stream flow-----	13,000 acre feet.
Round Valley storage-----	47,000 acre feet.
Total -----	60,000 acre feet.

Should it be found that all the storage at Round Valley can not be used advantageously in Big Valley, any surplus might be applied to lands below Big Valley.

**North Side Main Canal.** For the first six miles this canal would be at an average distance of one-fourth to one-half mile south of the road between Adin and Lookout. In the four miles east of Lookout it would be one-half mile to one mile or more north of the road. The general course below Lookout would be south, with necessary detours to the west around low areas. This canal, approximately 45 miles in length, would irrigate about 15,000 acres.

**South Side Main Canal.** In the first five miles the South Side Canal location is within about one-half mile of Ash Creek. It then extends in a general southwesterly direction and at an average distance of one-half mile southeast of the C. W. Clark Company canal to a point about three miles east of Bieber, whence it would extend in a southerly direction to the lower end of Big Valley. The total length of the canal would be 30 miles. About 15,000 acres could be irrigated under this canal.

**Cost of Canals.** The location of the canals would generally be through rolling lands, ranging in formation from earth to cemented materials. The grade would vary from two and one-half to three feet per mile. No unusual structures, except possibly a flume crossing Willow Creek, would be required. Rights of way should be uniformly low in cost.

	Area Irrigated, acres	Length, Miles	Total cost
North Side Canal-----	15,000	45	\$160,000 00
South Side Canal-----	15,000	30	140,000 00
Total -----	30,000	75	\$300,000 00
Average cost per acre-----			\$10 00
Add for structures-----			1 50
Total -----			\$11 50

An allowance of 25 per cent overhead expense for engineering and contingencies is included in the above estimate.

**Distribution System.** The irrigable lands are all within from one to three miles of the main canals. The estimated cost of the lateral system is assumed not to exceed \$7.50 per acre.

**Summary of Costs.** The total construction cost of the project as outlined is therefore as follows:

	Total cost	Cost per acre
Storage, 47,000 acre feet.....	\$335,000 00	\$11 17
Main canals, 75 miles.....	345,000 00	11 50
Distributing laterals, 30,000 acres.....	225,000 00	7 50
Total cost .....	\$910,000 00	\$30 17

Say in round numbers \$30.00 per acre.

Similarly as in the case of lands under the Jess Valley storage, any equitable plan of apportionment of construction charges to the lands should take into account rights already vested and works already constructed and capable of utilization, and apportion charges accordingly.

**Drainage.** Drainage conditions in Big Valley appear to be generally fairly satisfactory except where affected by dams and obstructions placed in the river channels. Some lands, mainly west of Bieber, are flooded in spring by overflow from the Pit. These floods are of short duration, generally lasting not more than three days. No item for drainage is allowed for in estimates of cost of reclaiming these lands.

## POWER DEVELOPMENT POSSIBILITIES.

### GENERAL.

Consideration in this report to water power possibilities on the streams in the Pit River basin is given mainly to show the extent, if any, of interference between possible development of power, irrigation, flood control or storage works. On this account no account is taken of power development possibilities on the McCloud or other tributaries on which irrigation or storage works are infeasible. Power can be developed in large quantities along the main stream of the Pit below Fall River Mills and on tributaries entering below that point; the various irrigation and storage works above that point, discussed herein, interfere with these power possibilities to some degree, and this chapter discusses these in detail.

### **POSSIBLE POWER ABOVE FALL RIVER.**

Above the junction with Fall River the Pit is usually dry during the summer months, all supplies from tributary streams being used for irrigation. All storage that can be obtained at reasonable cost will also be needed to irrigate local lands. As a result, hydro-electric development will probably be confined to small perennial streams on which no favorable storage sites exist, and at no time will the development of power in this region be of large amount. A small installation of about 300 horsepower on Pine Creek now supplies the market at Alturas and Cedarville. Doubtless other small developments are possible especially on the streams issuing from the Warner range, but none of these are affected by nor do they affect irrigation possibilities in this basin.

### **POSSIBLE POWER FROM FALL RIVER TO MOUTH OF THE PIT.**

**Fall River.** From February, 1912, to September, 1913, a total of 20 months, the mean flow of Fall River was 1,410 cubic feet per second, the minimum about 1,250 and the maximum about 1,600. As this period was one of low run-off in northeastern California, being only 64 per cent for the Sacramento River basin above Red Bluff, a longer record on Fall River would probably give a slightly higher value for the mean flow. With complete reclamation of swamps and irrigation of all suitable lands, the flow of Fall River may be reduced about 150 second feet during four to five months of the year.

**Hat Creek.** Hat Creek is supplied from three main sources, Upper Hat Creek, Rising River and Crystal Lake, all of which issue from springs. Upper Hat Creek was measured from August, 1911, to August, 1913, at the Hawkins Ranch near the head of Hat Creek Valley. The total creek flow, together with irrigation diversions, averaged about 190 cubic feet per second with a minimum of about 130 and a maximum of about 220. It is probable that a longer record would show a slightly larger mean. Irrigation of all lands adjacent to Hat Creek will require the entire flow of this portion of the creek during four to five months of the year.

Rising River probably obtains some of its supply from the waters of Loss Creek, a stream of over 75 second feet in discharge which sinks after flowing one and one half miles. Loss Creek is probably supplied in large part from Butte Creek, another stream which sinks after flowing a few miles. Rising River from August, 1911, to September, 1913, had a mean flow of about 375 cubic feet per second, with a minimum of 290 and a maximum of 490. A longer record would probably furnish a slightly greater value for the mean discharge.

Crystal Lake is supplied entirely from spring flow. Its discharge into Hat Creek is very uniform and amounts to approximately 150

PIT RIVER AT JUNCTION OF FALL RIVER LOOKING UP-STREAM TOWARD THE  
FALL RIVER RESERVOIR.

FALLS ON PIT RIVER THREE MILES BELOW FALL RIVER MILLS.

second feet. Small springs entering between Cassel and Carbon add about 50 second feet to the flow of Hat Creek.

The total flow of Hat Creek below Crystal Lake is therefore about 750 cubic feet per second, including irrigation diversions, which under the present lavish methods of use on the stream amount to over 100 second feet. With complete irrigation of all lands in Hat Creek Valley, and such others at the west as may be supplied from this stream, 200 second feet during four or five months of the year will probably be required, thereby reducing the flow of Hat Creek at Cassel, two miles below Rising River, from about 550 to 350 cubic feet per second, and of lower Hat Creek near Carbon from 750 to 550 cubic feet per second. Stream flow might be regulated by storage at Great Spring.

**Burney Creek.** Records of discharge have been made on upper Burney Creek for several years. The summer flow is entirely used for irrigation. At the lower end of Burney Valley the ground water storage, obtained from upper Burney Creek and other tributary areas, issues in fairly well-regulated spring flow and discharges over Burney Falls with a drop of 110 feet. Miscellaneous measurements by the United States Geological Survey of the flow of Burney Creek, some distance below the falls, show as follows:

Sept. 15, 1902.....	209 cubic feet per second.
Sept. 9, 1903.....	210 cubic feet per second.
Sept. 25, 1910.....	246 cubic feet per second.
Sept. 5, 1912.....	146 cubic feet per second.

**McCloud River.** Measurements of discharge on McCloud River have been made for over ten years. The mean flow is very nearly 2,200 cubic feet per second, with a minimum of 1,150 and a maximum of 41,500. The supply is largely from springs, but at times a considerable surface run-off occurs. There are practically no irrigable lands in the basin of this river. No large storage sites are found along the McCloud, the river being in a deep and narrow canyon.

**Smaller Tributaries.** Kosk and Squaw creeks enter the Pit from the north, while Hatchet and Montgomery creeks enter from the south. None of these streams have a large low water discharge. Kosk and Squaw creeks fall below 30 cubic feet per second in summer, while Hatchet and Montgomery creeks drop to less than 20 cubic feet per second.

**Pit River, Below Fall River Mills.** On Pit River, below the junction with Fall River, there are two gaging stations, one at Henderson above Kosk Creek, on the big bend of the Pit, and the other at Silverthorne Ferry near Ydalpom post office, one half mile below the mouth of Squaw Creek, about four miles above the mouth of McCloud River, and seven miles above the junction with the Sacramento. The entire channel of the Pit from Fall River to the Sacramento is in a deep, narrow, rocky gorge.

At Henderson the mean flow from January, 1912, to August, 1914, was about 3,600 cubic feet per second, with a minimum of about 2,500 cubic feet per second and a maximum of about 12,000 cubic feet per second. This period was about normal in run-off. The normal low water flow is usually considered about 2,600 second feet. This will be reduced to about 2,250 second feet during four to five months of the year if full irrigation development as herein outlined be accomplished.

At the lower station near Ydalpom the mean flow from November, 1910, to September, 1914, was approximately 5,400 second feet, with a minimum of about 2,740 second feet and a maximum of over 30,000 second feet. The period was below average in run-off. It is probable that the low water flow would be reduced to about 2,400 second feet during four to five months of the year on account of irrigation diversions as above outlined.

The total extreme low water flow of the Pit below the mouth of the McCloud is about 4,000 cubic feet per second, while that on the Sacramento at Red Bluff is about 4,200 second feet. Both of these flows will similarly be reduced about 350 second feet by irrigation development.

#### **POWER PROJECTS ON HAT CREEK, FALL RIVER AND PIT RIVER.**

**Projected Projects.** These are described in the following paragraphs which have been contributed by Mr. F. G. Baum, consulting engineer, of San Francisco.

**Hat Creek, Between Cassel and Carbon.** Near Cassel, rapids and falls totaling about 210 feet in about one mile have a normal flow of about 550 second feet, as stated in the preceding section on "Hat Creek" in this chapter. It has been estimated that this flow may eventually be reduced to a minimum of 350 second feet during several months of the year by irrigation diversions above; 6,000 to 8,000 horsepower may be developed.

Near Carbon a second series of rapids and falls occurs with a total drop of about 200 feet in a distance of about one mile. With a normal flow of 750 second feet, as stated in the section on "Hat Creek" previously referred to, reduced to a possible minimum of 550 second feet by irrigation diversions above during several months of the year, 9,000 to 12,000 horsepower may be developed.

No storage (except forebay storage) would be required and the flow conduit may be an open flume or wood stave pipe. The developments would be simple and it has been estimated that the cost of development would be about \$60 per horsepower without transmission system.

**Fall River, Near Fall City.** Fall River has an average flow of about 1,410 second feet, as previously stated in this chapter in the section

on "Fall River," with a probability of reduction by irrigation diversions above to 1,260 second feet. At Fall City there are falls and rapids totaling about 70 feet, so that about 7,000 horsepower may be developed.

It has been proposed to drive a tunnel from a point on Fall River a few miles up stream from Fall City, in a southwesterly direction, and drop the water of Fall River through a power plant located on the Pit River a few miles down stream from Fall City. A head or drop of about 400 feet can be obtained, giving about 40,000 horsepower. No estimates are available but the unit cost should be low. No storage is required. The pressure conduit would be about one mile long (in addition to two mile tunnel).

**Big Bend of Pit River.** It has been proposed to drive a tunnel across what is known as the Big Bend of the Pit River near Montgomery Creek. The flow of water available is about 2,600 second feet, as shown previously in this chapter in the section entitled "Pit River, below Fall River Mills." It is estimated that irrigation diversions will reduce this flow to 2,250 second feet during four to five months of the year. The head obtainable is about 800 to 900 feet, depending on the way it is developed. There can be developed, therefore, about 150,000 horsepower. No storage is required. The flow tunnel will be about seven miles long and the pipe line will be about one mile long. The length of flow tunnel and the size of tunnel will necessarily make the initial cost high unless a very large amount of power is developed for the initial stage.

**Markets For Pit River Power.** The natural development of the Pit River power possibilities will come through the establishment of some electro-chemical enterprises relatively near the source of power. The development of this power for the more distant market, the San Francisco Bay region, need hardly be considered for the reason that there is so much undeveloped water power one hundred miles nearer. These nearby powers it is desirable to develop for the additional reason that the storage water developed as a necessary part of the hydro-electric power will become available for irrigation on lands for which there is a demand and also improve the low flow of the lower stretches of the navigable rivers.

The Pit River power can be developed at a low enough cost to attract industries requiring large amounts of power at a low price, and fortunately developments are available to meet large or small demands at about the same unit cost. For this low priced power the cost of transmission must be reduced to the lowest possible amount. The writer has repeatedly urged the manufacturers of cyanamid, and other large power users, to investigate this territory, and it is hoped that they will seriously consider these powers in the near future.

## FLOOD CONTROL AND NAVIGABILITY.

### INFLUENCE OF UPPER PIT RIVER ON SACRAMENTO RIVER FLOODS.

During the past eleven years, for which time fairly complete records of run-off are available, there have been four exceptional periods of flood water discharge on the Sacramento River at Red Bluff. The Iron Canyon report states: "The first of these occurred on February 16, 1904, with a discharge of 188,000 second feet. Pit River at Bieber had its high water stage at 8,560 second feet on the day after the Sacramento at Red Bluff was in flood, and probably contributed less than 1,000 second feet to the 188,000 of the Sacramento at Red Bluff on February 16th.

"On March 20, 1907, occurred one of the most serious recent floods in the Sacramento Valley. The corresponding flows of the Sacramento River at Red Bluff and Pit River at Bieber were as follows:

Date	Sacramento, second feet	Pit, second feet
March 16	23,600	2,770
March 17	39,100	17,400
March 18	118,000	25,000
March 19	164,000	27,500
March 20	192,000	25,000
March 21	132,000	20,800
March 22	92,900	13,800
March 23	120,000	8,810
March 24	80,800	6,110
March 25	64,000	4,160
March 26	57,100	4,000

"From March 18 to 21 the Sacramento at Red Bluff discharged 1,200,000 acre feet; the Pit at Bieber discharged 195,000 acre feet.

"From the above it is evident that the Pit at Bieber contributed at the most about 15 per cent of the peak flow of the Sacramento during this flood, and about 16 per cent of the entire river discharge during the critical three days.

"During the high water on the Sacramento at Red Bluff from February 2 to 4, 1909, with a maximum mean daily flow of 254,000 second feet, it is doubtful if the Pit furnished any appreciable amount of the flow. As there were no gage heights observed at Bieber, the amount of precipitation and weather reports at Alturas are the only guide to the conditions on the upper Pit. During the first half of January there were 3.45 inches of precipitation, while the second half of the month gave only 1.02 inches with nothing after January 27th."

In the weather report from Alturas January 31, 1909, the following statements were made:

"The lowest temperature (in California) was 21° below zero at Alturas on the 10th.

"On the summit, between Alturas and Cedarville, there is at least four feet of hard snow, and on the higher parts of the Warner range there is much more. Probably there is more snow on the mountains than at any time last winter."

No unusual precipitation occurred in February, the total for the month being only 1.58 inches. From February 1st to 4th only .04 inches of precipitation fell. Temperatures during the month were extremely low. The following statement of the weather observer at Alturas gives a summary of conditions during February:

"On the pass over the Warner range to Surprise Valley there is five feet of hard snow, and still more on the higher parts of the mountains.

"This has been the coldest and cloudiest February in the memory of the oldest inhabitants."

This evidence is quite conclusive that little or no snow melted during February and that the flow of the Pit at Bieber must have been very small.

January, 1909, was a month of record precipitation at Alturas and a number of other localities in northern California. February was also a very wet month at most places in northern California. A record of the precipitation at various places is given to show the relatively small amount received at Alturas.

Precipitation of 1909 in Northeastern California.

	January (inches)	February (inches)	Total (inches)
Alturas -----	4.47	1.58	6.05
Delta -----	53.28	28.78	82.06
Dunsmuir -----	32.60	20.87	53.47
Shasta -----	35.96	15.17	51.13
Redding -----	24.28	12.70	36.98
Red Bluff -----	13.42	8.20	21.62

The Iron Canyon report states: "During the floods of January and February, 1914, the corresponding flows at Red Bluff and Bieber were as follows:

**Discharge in Second Feet.**

Date		Sacramento at Red Bluff	Pit at Bieber
1913—December	30	25,400	475
	December 31	139,000	1,060
1914—January	1	151,000	1,900
	January 2	144,000	2,702
	January 3	116,000	4,370
	January 4		9,560
	January 5		13,000
	January 6		9,560
	January 7		6,960
	February 19	59,800	2,490
	February 20	102,000	3,220
	February 21	160,000	3,520
	February 22	94,500	3,680
	February 23	70,200	3,370

"During 1914 the Pit, therefore, contributed a maximum of two per cent to the peak floods of the Sacramento at Red Bluff."

On February 2, 1915, the Sacramento River was again in flood, the maximum discharge at Red Bluff reaching about 270,000 second feet. On this date the Pit at Ydalpom was likewise at high stage, reaching however only about 30,000 second feet. Probably less than 10 per cent of this 30,000 second feet was contributed by the portion of the Pit above Fall River Mills, making the contribution from the Upper Pit less than two per cent of the flow of the Sacramento at Red Bluff on that date. All but a negligible part of the flood flow of the Sacramento at Red Bluff in February, 1915, was therefore caused by storm conditions local to the foot-hills at the head of the Sacramento Valley.

From the above analysis it has been shown that for the last five years of flood discharge on the Sacramento River at Red Bluff, namely, 1904, 1907, 1909, 1914 and 1915, the upper Pit played an almost negligible part in three out of five years as shown by actual records of run-off; that it furnished an almost negligible amount in 1909 as shown by records of weather conditions and other evidence, and that it contributed about 15 per cent to the flood flow of 1907 as shown by measurements. It is therefore evident that from the upper Pit, above the points where great storage is alone available, large flood discharge does not originate and that control of floods in the Sacramento Valley, by a reservoir at Big Valley or Fall River Valley, is impracticable.

### **INFLUENCE OF IRRIGATION DEVELOPMENT IN THE PIT RIVER BASIN ON THE LOW WATER FLOW OF THE SACRAMENTO RIVER.**

As previously stated, the Pit usually has practically no discharge above Fall River during the summer and early fall months. Irrigation development for lands in and above Big Valley can not, therefore, have any influence in reducing the low water flow of the Sacramento River.

Irrigation diversions from Fall River and Hat Creek, previously described, will probably reduce the low water flow of Sacramento River at Red Bluff about 350 second feet, or about 8 per cent of the extreme low water flow.

---

## **GENERAL CONSIDERATIONS CONTRIBUTING TO AND RESULTING FROM THE DEVELOP- MENT OF THE PIT RIVER BASIN.**

---

### **TRANSPORTATION.**

Heretofore the live stock and lumbering industries have been almost the exclusive business of the Pit River basin. As a consequence transportation has been developed only to a sufficient extent to meet the demands of these industries. The McCloud River Railroad has constructed a line from Sisson on the Shasta division of the Southern Pacific east to Bartle. In the area west and north of Bartle extensive lumbering operations are carried on. The wagon haul from Fall River Valley to Bartle is 25 miles, from Hat Creek and Burney 35 to 40 miles, and from Big Valley 50 to 60 miles. It is common to drive livestock even greater distances, but the wagon haul is such that ordinary farm products can not reach outside markets. A moderate amount of business has recently developed in cheese making, although there is much inconvenience caused by difficulties of transportation.

At the extreme east of the Pit territory the Nevada-California-Oregon Railroad extends through South Fork and North Fork valleys. This is a narrow-gauge road from Reno, Nevada, to Lakeview, Oregon. The easterly territory of the Pit is therefore supplied with rail transportation requiring a comparatively short wagon haul.

The most serious lack of transportation facilities is in Big Valley, which is approximately 50 miles from any railroad point. Moreover the wagon roads to shipping points are built over mountain grades, thus adding to the difficulties of long haul.

A number of routes have been surveyed or projected through the central portion of the Pit River basin. One, called the Goose Lake and Southern, is an extension of the McCloud River Railroad through Fall River and Big Valleys up Pit River to Alturas. Other routes projected consist of main line roads from the Klamath Falls region through Fall River or Big Valley to connect with the Susanville branch of the Southern Pacific: a similar line from Oregon south to the Pit and along this river to Fall River Valley, thence southwest through lower Hat Creek Valley and Burney Valley to the Sacramento Valley. There is no doubt that additional transportation facilities would be of great benefit to the valleys of the Pit and would result in a strong stimulus to irrigation and other development. There would likewise be constructed better wagon roads between the various valleys connecting with the important highways of the State.

### **INFLUENCE OF IRRIGATION DEVELOPMENT.**

It appears that the crop production along the Pit and its tributaries now equals and possibly even exceeds the entire demands of the livestock industry. Already cheese factories have been installed, and a creamery is now being started at Alturas. As irrigation supplies are made available for new lands and the crop production on the older areas is improved, it may be expected that a considerable development along the lines of dairying will result. The shipment of these and other finished farm products seems to be along the line of logical development for this region, which is 100 miles or more further distant from large markets than most other points in California.

## CONCLUSIONS AND RECOMMENDATIONS.

---

### GENERAL.

A number of specific conclusions both as to existing conditions and suitable policies for the more satisfactory development and utilization of the natural resources of this region have been reached by the engineers of the reclamation service having charge of this investigation and by the Engineering Department of the State of California, with which they are co-operating. These are as detailed below.

Recommendations as to action by the United States and the State of California in disposing of or reserving public lands and waters and the future measurement of streams flowing by important damsites are also made by the same parties. No attempt has been made herein to formulate specific recommendations as to the adoption of any project, such action being outside of the purpose of this investigation.

### CONCLUSIONS.

1. That in the Pit River basin there are about 180,000 acres of potentially fertile, irrigable land, of which about 40 per cent is now fully or partially irrigated.

2. That of the areas now irrigated only an insignificant proportion is well developed agriculturally, due in large part to unregulated water supplies and to unsatisfactory drainage conditions.

3. That Jess Valley and Round Valley offer the most favorable sites for the development of storage for use on lands in the Pit basin. There is good reason to expect that the cost of irrigation development under these sites will be in keeping with the expense usually incurred for similar and successful enterprises.

4. That lands in Fall River Valley can be advantageously irrigated by pumping, the supply being practically inexhaustible.

5. That lands adjacent to and in the vicinity of Hat Creek, that are not yet irrigated, can be readily irrigated by direct diversion without storage. These lands are, however, now mostly timbered, and their development is not a matter for immediate consideration.

6. That there are a number of small irrigation developments possible in various localities but that none of these involve large engineering problems.

7. That Willow Creek, in the Klamath basin, may be a possible supplementary source of supply for lands in Big Valley but this can only be ascertained by extended observation of the yield of the creek and by careful surveys and estimates of cost.

8. That under conditions of today Goose Lake is an impracticable source of water supply for territory in or below the Pit River basin.

9. That irrigation development in the Pit River basin will not seriously interfere with future power development in or below the basin.

10. That irrigation development in the Pit River basin will reduce the low water flow of the Sacramento River at Red Bluff only about 8 per cent and will not, therefore, seriously interfere with the navigability of the river.

11. That floods in the Sacramento Valley can not be controlled by storage in the Pit River basin.

### RECOMMENDATIONS.

1. That unentered public lands in and adjacent to Jess Valley and Round Valley as listed below be withheld from entry for future storage use.\*

Township 39 North, Range 14 East, Mount Diablo Meridian:

Sections 1, 2, 11, 12 and 13—all.

Section 10—E.  $\frac{1}{2}$ .

Section 14—N.  $\frac{1}{2}$ , SE.  $\frac{1}{4}$ .

Section 23—E.  $\frac{1}{2}$ .

Section 24—N.  $\frac{1}{2}$ , SW.  $\frac{1}{4}$ .

Township 39 North, Range 9 East, Mount Diablo Meridian:

Sections 3, 10, 11, 13, 15, 16 and 22—all.

Section 2—W.  $\frac{1}{2}$ , SE.  $\frac{1}{4}$ .

Section 4—N.  $\frac{1}{2}$ , SE.  $\frac{1}{4}$ .

Section 9—E.  $\frac{1}{2}$ .

- Section 12—W.  $\frac{1}{2}$ .

- Section 14—N.  $\frac{1}{2}$ .

Section 21—E.  $\frac{1}{2}$ .

Section 23—W.  $\frac{1}{2}$ .

Section 27—N.  $\frac{1}{2}$ .

Township 40 North, Range 9 East, Mount Diablo Meridian:

Section 33—S.  $\frac{1}{2}$ .

Section 34—S.  $\frac{1}{2}$ .

2. That all other public lands in the Pit River basin which may be now withheld from entry under the Reclamation Act be restored to entry.

3. That no future appropriations of water for power or other purposes in the Pit River basin that will tend to limit or retard irrigation development in the basin be allowed by the State of California.

4. That measurements of stream flow on South Fork of Pit River near Jess Valley damsite and on Ash Creek at Adin should be resumed by the United States and the State of California.

The above are concurred in.

(Signed) W. F. McCLURE,  
State Engineer of California.

E. G. HOPSON,  
Supervising Engineer U. S. Reclamation Service.

\*NOTE.—Not more than about 100 acres of unentered public land recommended for withdrawal is agricultural, most of the areas being steep, rocky, pasture land.

# BIENNIAL REPORT OF THE STATE BOARD OF PRISON DIRECTORS.

---

*His Excellency, HIRAM W. JOHNSON,*  
*Governor of California,*  
*Sacramento, California.*

SIR: As required by law, the State Board of Prison Directors hereby submit their report for the two years ending June 30, 1914. Since the last biennial report was filed, the following changes have taken place on the board: On June 19, 1914, Charles E. McLaughlin, of Sacramento, became a member of the board, succeeding Tiley L. Ford, of San Francisco, whose term expired.

## **Prison Population.**

On June 30, 1914, there were in prison at San Quentin 2,183 men and 26 women. In Folsom prison there were 1,160 men, making a total of 3,369 inmates in the State prisons of California. There were on parole at that time 537 from San Quentin and 227 from Folsom, a total of 764 on parole. There were, therefore, actually under commitment, confined and on parole, a total of 4,133 prisoners, as against 3,565 on June 30, 1912. Practically all of this increase in prison population has been taken care of at San Quentin.

## **Progress in Prison Management and Prison Development.**

The rapid increase in prison population has made it difficult, indeed practically impossible, to provide ample facilities for housing. As fast as buildings are constructed they are occupied, and the prisons are now, as they have been for years, overcrowded. Requests have been made of the Legislature for appropriation for new buildings, and the completion of buildings already projected. We are hopeful that the Legislature will respond as generously as the State's finances will permit, and, if allowed the funds necessary for completion of buildings and extension of walls, we will be enabled to put into practice our plans for the segregation and classification of inmates.

## **SAN QUENTIN PRISON.**

### **New Construction, Repairs and Improvements.**

Since our last report the new cell block, containing 800 single cells, the dining room, kitchen and bake-shop, cold storage plant and ice-making plant, have been turned over to us by the State Department of Engineering, and all are now in use. Under the direction of the State Department of Engineering we have also made extensive repairs to the

hospital buildings. We now have an excellent operating room, sterilizers, laboratory, drug store, medical and surgical wards, detention room, wards for the infirm, and open air quarters on the roof for those afflicted with tuberculosis.

#### **Sanitary Conditions.**

The sanitary condition of the prison is good; the water supply is adequate, though costly, and the sewerage system has been improved and is now first class. The buildings and grounds are well policed, and all refuse is removed daily. The resident physician, or his assistant, makes regular visits to all departments of the prison, taking special notice of all things that might cause spread of disease, and gives proper directions for abatement and instructions in hygiene. This work is done regularly and with such thoroughness as to actually constitute a sanitary survey.

#### **Women's Quarters.**

The building containing the Women's Ward has been completely overhauled and renovated. The roof and fire walls and exterior of the building have been fire-proofed, and the interior tinted or painted; a system of steam heating has been installed, and many minor improvements have been added that tend to make it more cheerful, comfortable and sanitary.

#### **Food Supply.**

Every precaution is taken to see that we get full weight, full count, full measure and quality in accordance with specifications, from every contractor, and the commissary and stewards have been instructed and do insist upon a most rigid inspection of all articles purchased, particularly items of subsistence. Articles not up to standard are rejected. Every effort is made to prepare foodstuffs in ways that will prove appetizing and nutritious. While the food supply to prisoners is necessarily plain in character, it is, nevertheless, ample, wholesome and very well prepared, and served as appetizingly as possible, considering the great number for whom it is prepared.

#### **Health of Prisoners.**

The medical department has attained a place of first importance in our management. Every man received is given a thorough physical examination. Many men enter the prison in bad shape physically—nervous, run-down, exhausted, and showing in many ways the results of irregular and intemperate living. The physical examinations show almost 25 per cent of the newcomers to be tuberculous in incipient stage. These receive the best of treatment in open air wards. Many have venereal diseases, and some syphilitic taint, requiring isolation and special treatment. Those who have been addicted to the use of

opium, morphine, cocaine or other narcotics, require and receive special treatment and cure. Frequently men received are in need of an operation or medical treatment before it is possible to assign them to labor.

#### **Educational.**

Rapid strides have been made in the past two years in the educational work. We are now conducting a day school for boys or young men who are in need of rudimentary training. These young men are assigned alternate work with study—spending half of each day in the shops and an equal amount of time in the school, which is conducted along lines comparable with the public schools, graded from first to eighth grades. Night schools have been organized for the benefit and training of men of mature years. We also have an arrangement with the University of California by which our inmates can take correspondence courses. Supplemental classes have been organized as an aid to the men taking correspondence courses, and the results have been very gratifying.

The library has undergone improvements in the past year, and is now in good shape. We have on our shelves and catalogued at the present time 7,250 volumes, and we also subscribe for the standard and popular magazines, which are systematically distributed.

#### **Manufacturing Department.**

Considerable progress has been made in the past year in the manufacturing departments, and the quality of the product now turned out under the State Use system has been improved to such an extent that the complaints, which were so numerous in the early days of the use of the system, have been greatly minimized. The furniture factory has recently executed orders for the State Capitol building, consisting of roll top and flat top desks, tables, chairs, book cases, filing cabinets and typewriter desks, and they have been much admired and favorably commented upon when compared with articles of similar character purchased from regular dealers.

### **FOLSOM PRISON.**

#### **Discipline.**

Aside from the threatened outbreak among the number of offenders who were in solitary confinement, early in the spring of 1914, there has been nothing of a very serious nature to mar the otherwise good behavior of the inmates. Taking the prison body as a whole, the prison discipline has been excellent, and during the period of this report there have been fewer infractions of the rules than at any other similar period in the history of the prison.

### **General Improvements.**

Modern concrete lavatory and wash and bath rooms have been built inside the prison; cells have been thoroughly renovated, balconies repaired and walls painted. Extensive improvements have also been made in the officers' and guards' quarters, and a new stone building—an extension of the old building—has been completed. We have installed in these new quarters the photograph gallery, printing office, officers' and guards' barber shop, clothing room and Bertillon room. Several new guard posts have been built and others repaired, and many minor improvements have been made in all quarters of the prison as need for them were shown and finances permitted.

### **Ventilating System.**

The system of ventilation recently installed meets our every expectation in furnishing fresh air to the prisoners' sleeping quarters, and has had excellent effect upon the inmates' health. This system consists of a six-inch cylindrical duct, leading from an exhaust grille to each of the 373 cells, and connects with a main over each tier, the mains connecting at the joining of the buildings, where an electrical fan exhausts through the roof to the outside atmosphere.

### **Health of the Inmates.**

Prisoners receive the best of medical attention. Every newcomer is examined. The medical staff is efficient, and everything possible is done to put the men in such shape that they actually leave the prison in better health than when they entered. That proper medical attention, improved sanitary conditions, regular living and wholesome food works wonders in the health of the prisoners is demonstrated by the death rate records, which show that only twenty-four deaths, resulting from sickness and senility, occurred in this biennial period.

### **Prison School.**

The successful operation of the school established at Folsom Prison has been most gratifying. Arrangements have been made to enable prisoners to take up the elementary branches, and inmate instructors are conducting the classes under the direction of an instructor from the University of California, who visits the school at regular intervals.

The prison library has been growing constantly, and now has 3,400 volumes of standard fiction, poetry, biography and text books, to which all the inmates have access, as well as 200 weekly or monthly periodicals, which are distributed in systematic manner from cell to cell.

### **New Construction.**

The new cell building that is being constructed under the supervision of the Department of Engineering will have accommodations, when complete, for 512 prisoners, one man to a cell, and each cell will be

equipped with electric light, steam heat and running water. We are rendering every assistance that we can possibly render to the Department of Engineering, and hope that that department will be able to devise some means for rapid completion of this building, or put it into such shape as will enable us to occupy it, without waiting for the completion of the outer granite building, which may take many years to build.

#### **Farm and Stock Department.**

During the past two years success has attended practically all of our efforts in the farm and stock departments, and much of the land in Folsom that was unused for many years, and thought to be of little or no value for farming purposes, is yielding fine and abundant crops; onions, cabbages, radishes, carrots, squash, etc., all of good quality, are grown in sufficient quantities to enable us to furnish not only the officers and guards, but the prison mess, thus adding greater variety to the fare and keeping down the cost. One hundred and forty acres which, prior to the period of this report, were unused, have been cleared of brush and stone and cultivated and sown to barley and oats, making a total of 240 acres now under cultivation.

A new dairy barn has been built of concrete, with silo adjoining. This barn, which was constructed under the supervision of the Department of Engineering, is first class in every particular.

#### **PAROLES.**

Splendid success has attended the operation of the parole system during the past two years. As we grow in experience with the parole system and with paroled men, we are evolving better methods of handling the prisoners' applications for parole, and determining their fitness, and also better facilities for their supervision while on parole. The parole law was used very cautiously in the beginning, but experience has demonstrated its value and usefulness in weaning men away from crime and restoring them to the ranks of self-supporting, self-respecting citizens. We have gradually increased the number of paroles year by year. Since the parole statute became effective in 1893, 2,937 paroles have been granted, of which number 1,096 have been paroled during this last biennial period. At the present time 227 are on parole from Folsom and 537 from San Quentin, a total of 764 now on parole. Records show that 22 per cent of the men fail to observe all of the conditions of the parole, while 78 per cent succeed. Of the 22 per cent who are classed as failures, only 4 per cent commit new crimes, the other 18 per cent failing to observe parole conditions or commit petty offenses.

In addition to a showing of greater liberality in the matter of paroles during the past four years, we have modified many of the conditions, such as removing the necessity for making a deposit and for advertising intention to apply for parole. These conditions have been removed as experience showed them to be operating in favor of the men with friends and money and against the penniless and friendless, no matter how good a case he might have.

During the past two years we have, in connection with the parole work, developed what practically amounts to an employment agency for placing the men, and besides helping them to get employment, we furnish them with clothing, transportation, and money with which to purchase food until they reach their employment; and in many cases with tools.

#### GENERAL TREATMENT OF PRISONERS.

We are trying, with every means in our power, to take men who are committed to our care and return them to society better than when they were received at the prisons. We are endeavoring to supplant sickness with health, idleness with industry and ignorance with knowledge. Special attention is given to the physical, mental and moral welfare of all inmates. Medical attention and hospital facilities and sanitation are considered of prime importance. The educational opportunities are excellent at both our prisons, and trade-training is fostered and developed. The parole system is regarded as perhaps our most valuable agency in rehabilitation, and every stage in it, from the time a prisoner's application for parole is filed until he receives his final discharge by expiration of sentence receives our careful attention.

In conclusion we wish to say that our work has been made easy and pleasurable by the support given this board by your Excellency.

Respectfully submitted.

C. E. McLAUGHLIN.  
CHAS. SONNTAG.

## WARDEN'S REPORT.

---

STATE PRISON, SAN QUENTIN, CALIFORNIA.

December 12, 1914.

*To the Honorable, the State Board of Prison Directors,  
San Quentin, California.*

GENTLEMEN: I have the honor to submit herewith my report of the San Quentin State Prison for the sixty-fourth and sixty-fifth fiscal years, which includes reports of the various heads of departments. Detailed information concerning population, health, ages, nativity and occupations of the prisoners, the cost of maintenance, distribution of supplies, operations of the jute mill, the clothing, shoe and furniture factories; medical, dental and educational, as well as the finances of the institution, will be found in the reports of the Clerk, Commissary, Distributing Officer, Turnkey, Chaplain, Resident Physician, Resident Dentist, Captain of the Yard and Captain of the Guard.

### POPULATION.

That there has been a very large increase in population during the past year, will be observed by the tabulated report of the Turnkey. The daily average population during the sixty-second fiscal year was 1,906; sixty-third fiscal year 1,892; sixty-fourth fiscal year 1,902; sixty-fifth fiscal year 1,990; and at the time of submitting this report, the population is 2,260. As is well known to the members of your honorable Board, this extraordinary increase is due to the fact that during the past year the superior court judges have refrained from sending many offenders to Folsom because of the over-crowded condition there, and have been sending convicted men here because they supposed that on account of the opening of our new cell building we would have ample room for housing. While the opening of the new cell building gives us accommodation for housing 800 men, it must also be borne in mind that prior to its opening, the old cell buildings were greatly overcrowded and hundreds of men were sleeping in the quarters now used for manufacturing purposes. We are again overcrowded and lack facilities for the proper housing of all inmates.

### DISCIPLINE.

The discipline covered by the period of the report has been very good. You will observe from the report of the Captain of the Yard

that the number of infractions of the rules—in proportion to the population—has greatly decreased. All forms of corporal punishment have been abolished. The “sash and blind” building has not been used for incorrigibles since November, 1913. The usual penalty is forfeiture of privileges for minor infractions of the rules, and confinement in the dungeon for more serious offenses.

#### HEALTH OF PRISONERS AND MEDICAL ATTENTION.

Every man received nowadays is given a thorough physical examination. Many men come to us in bad shape. The physical examinations show many cases of tuberculosis in incipient stages; venereal diseases, and syphilitic taint, requiring isolation and special treatment. Many are addicts to the habit of using opium, cocaine, morphine, and these require and receive special treatment and cure. The medical department has attained a place of first importance in our policy of management. Frequently men when received here, are in need of an operation or other medical treatment before it is possible to assign them to labor. The report of the Physician shows that during the past two years 1,251 operations were performed. We have been fortunate indeed, in securing the help of many specialists who have given their time and services gratuitously, and while commending the splendid work of the Resident Physician, Dr. L. L. Stanley, I also want to take this occasion to thank Doctors G. R. Hubbell, A. S. Goldman, R. L. Rigdon, Robt. Peers, L. S. Mace, G. L. Boalt, E. D. Chipman, and A. F. and L. D. Green, for services rendered.

In touching upon health matters, I call your attention to the fact that the result of physical examinations and improvements in medical attention and hospital facilities, is rather strikingly shown not only in the improved health of the men, but in the death rate. A comparison of records on the latter subject for the past eight years shows that during the fiscal year ending June 30, 1914, we had not only the lowest death rate in proportion to the population, but also, regardless of increase in population, a fewer number of deaths than in any other period during the past eight years. During the fiscal year ending June 30, 1914, with an average population of 2,209, we had but 18 deaths, or, stated in percentage terms, a death rate of 8.15 per thousand.

The work of the dental department is treated fully in the report of the Resident Dentist, which is the first report on that subject, as the department was first established in the period covered by this

report, and in referring to it I want to say that it is a big factor in contributing to the health of the inmates. Viewing the work done in this department, and observing the condition of the men as received, it is difficult to comprehend how matters were managed without dental attention in the past. Certainly, the establishment of the dental department was a good move and in line with the humanities.

#### EDUCATIONAL.

Rapid strides have been made in the past year in the educational work. The Chaplain, who acts as educational director, examines every prisoner as he is received. Young men who are in need of training are assigned to day school. The boys, or young men, are assigned alternate work with study. Half of the number in the day school work in the morning and attend school in the afternoon, while the half who work in the afternoon attend school in the morning. For the benefit of the men of more mature years who need rudimentary training night schools have been organized, and we have at the present time 91 men attending night school. We also have an arrangement with the University of California by which our inmates can take correspondence courses, and since that arrangement 578 men have enrolled for correspondence lessons, and at the present time 258 are taking courses and pursuing their studies earnestly and diligently. Supplemental classes have been organized as an aid to the men taking correspondence courses, and one hour each evening is devoted to class room instruction. The men taking agricultural courses have been organized into the San Quentin Agricultural Club, and every Saturday afternoon two hours are devoted to talks, lectures and quizzes on the subjects they are studying. We are indebted to T. F. Hunt, Dean of the Agricultural College, H. E. Van Norman, Vice Dean of the Agricultural College and Director of the University Farm, Professors W. G. Hummel, F. F. Nalder, I. W. Howerth, and J. Evan Armstrong, for special help, personal instruction, talks and lectures for the benefit of the inmates taking correspondence courses.

I am doing everything possible within our means to build up the library, and have encouraged the men to make use of it. Our books are carefully selected and, so far as practicable, we try to direct the choice of books so as to secure the greatest benefits to the individual. We have on our shelves and catalogued at the present time 7,250 volumes, including much that is good in fiction, poetry, biography, history, educational, scientific and miscellaneous. We also subscribe for many of the popular standard magazines, which are systematically dis-

tributed. Our records of books drawn shows that 70 per cent of the men confined draw books, thus availing themselves of the opportunity to improve and educate themselves by reading.

#### MANUFACTURING DEPARTMENT.

We have made considerable progress during the past year in the manufacturing departments, particularly the furniture, clothing and shoe shops. The complaints that were so numerous against the delays in execution of orders, and the unsatisfactory character of the furniture that was made in the early days of the establishment of the furniture factory, have been minimized. The installation of the modern equipment that your honorable Board authorized for the furniture factory during the past year has enabled us to catch up with many orders that were overdue, also to very materially better the character of our product.

As you are well aware, the operations of the jute mill during the past season have not been very satisfactory, owing to the high prices paid for raw jute in 1913, that entered into the making of bags for the season of 1914; the tariff changes on burlap used by bagmakers; the drop in prices of finished bags in the middle of the order season, and requirements of the jute bag law that placed us at commercial disadvantage with the result that we were unable to sell our bags, and have carried over 2,700,000 bags, tying up considerable money and very seriously affecting the financial operations of the institution.

#### IMPROVEMENTS.

Since the last report the new cell house has been opened and the new dining room, kitchen and bake shops have been in use since November, 1913. The ice and cold storage plant is complete and we now have excellent facilities for cold storage of meats. The Women's Building has been water-proofed, plastered and painted, and there have also been many minor improvements. Both the old and new hospitals have been remodeled, and the roof of the old hospital and the library converted into open air wards for the care and cure of tuberculosis.

#### APPROPRIATIONS.

I have already submitted to your honorable Board a forecast of the needs of the institution for the sixty-sixth and sixty-seventh fiscal years and, with your approval, I submitted a statement of our request for appropriations to the Board of Control and the State Controller.

## RECOMMENDATIONS.

*Earning System for Prisoners*—In my opinion sufficient appropriation ought to be made to enable us to institute a system of paying wages, or earnings, to the men who do good work. Such a course will help us to make a success of the plan of manufacturing articles for use in the other state institutions, and will act as a natural yet powerful incentive to men to do good work. It will also be in line with the humanities, in that it will place before the prisoner an opportunity to earn, even while confined, some money—even though a small amount—that he can contribute to the support of his loved one who may be suffering while he is in prison, or, if he is without dependents, save until he leaves the prison. I have no doubt that in some cases money earned and saved while in prison would enable a man to make a proper start along honest paths, never to return to prison.

## ROAD BUILDING.

Under the existing laws as to working prisoners on public roads, we are authorized and directed to employ at least twenty prisoners daily, during fair weather, in the construction and repair of public roads in this county, restricted however to a distance within six miles of the prison buildings. During the past year we have worked from 20 to 30 men on the toll road at a point near San Rafael. These men worked under the supervision of the road boss, all the work being done on the honor system—that is, without the presence of armed guards. By legislative enactment removing the distance limit and properly providing for the support of the prisoners by the counties making use of their labor, and encouragement to the men either by payment in money, or credits allowed in time for road work performed by the new system, we could provide several hundred men for road work to be done for the benefit of the counties or the state.

## CONCLUSION.

During the period covered by this report I have been especially favored by your honorable Board by appointment to the position that I now occupy while acting as Warden at Folsom Prison, and during all of the time, in both positions, I have received whole-hearted cooperation. I take this opportunity to express my sincere appreciation of the confidence you have shown in me, and the courtesies extended, and I hope that my efforts to carry out your policy of fair,

humane treatment of the wards under our charge, warrant your approval. It is with pleasure that I also commend all of the officers, guards and employees of the prison who have, by loyal and efficient service, made it possible for me to give force and effect to your policies.

Respectfully,

JAMES A. JOHNSTON,  
Warden.

## CLERK'S REPORT.

---

CLERK'S OFFICE, CALIFORNIA STATE PRISON,  
SAN QUENTIN, CALIFORNIA, June 30, 1913.

*To the Honorable State Board of Prison Directors.*

GENTLEMEN: I have the honor to submit herewith, in tabulated form, statements showing all financial transactions of this prison during the fiscal year ended June 30, 1913, together with a summary of assets and liabilities at said date.

Respectfully,

MARK E. NOON,  
Clerk.

Grand total .....		\$361,797 54

\*New cell houses and cottages for employees, in course of construction, are under the supervision of the State Department of Engineering, and the expense in connection with said buildings is paid from a special appropriation for that purpose, controlled by the Department of Engineering.

## CLERK'S REPORT.

CLERK'S OFFICE, CALIFORNIA STATE PRISON,  
SAN QUENTIN, CAL., June 30, 1914.

*To the Honorable, State Board of Prison Directors.*

GENTLEMEN: I have the honor to submit herewith, in tabulated form, statements showing all financial transactions of this prison during the fiscal year ended June 30, 1914; together with a summary of assets and liabilities at said date.

Respectfully.

MARK E. NOON,  
Clerk.

## CAPTAIN OF THE GUARD'S REPORT.

CAPTAIN OF THE GUARD DEPARTMENT,

SAN QUENTIN, CAL, July 1, 1913.

*To Hon. JOHN E. HOYLE,**Warden of the State Prison, San Quentin, California.*

SIR: I hereby submit my report for the fiscal year ending June 30, 1913.

During the past year there was received on commitment to this prison eight hundred and thirteen (813) prisoners, while the discharges for the year numbered seven hundred and fifty-five (755).

Two attempts to escape were made during the past year, both being unsuccessful.

The prison has been kept entirely free from opium and other narcotics during the past year.

Target practice has been going on for the past six weeks, and good scores have been made considering very windy weather during the practice.

I am pleased to report that all the men have attended strictly to their various duties and excellent discipline has been maintained, which has tended to make my duties easy.

I append herewith in tabulated form my report on the number of prisoners received and discharged from this institution during the past fiscal year; also the number of prisoners visited by relatives and friends; also a record of the number of visitors shown through the prison during the fiscal year.

Yours very respectfully,

E. V. ELLIS,  
Captain of the Guard.

## CAPTAIN OF THE GUARD'S REPORT.

CAPTAIN OF THE GUARD DEPARTMENT,  
SAN QUENTIN, CAL., July 1, 1914.

To Hon. JAS. A. JOHNSTON,

*Warden of the State Prison, San Quentin, California.*

SIR: I hereby submit my report for the fiscal year ending June 30, 1914.

During the past year there was received at this institution one thousand and seventy-eight (1,078) prisoners, while the discharges for the year numbered seven hundred and ninety-eight (798).

There were two (2) escapes during the year, which could not be avoided at that time, owing to the fact that one of them was a trusty and the other was employed at that time in making repairs on the new cell building.

The prison has been kept free from opium and other narcotics for the past year, and the guards have been vigilant and attentive in all of their various duties.

Twelve shotguns, No. 10 gauge, and twelve Colt's revolvers, .38 caliber, were purchased during the month of May, which puts the Armory in a first-class condition.

Our annual target practice has been going on for the last two (2) months and the men continue to improve their averages above past years.

I am pleased to report that all of the men under my charge have attended strictly to all of their duties, and the discipline has been excellent, and by their hearty cooperation, my duties have been a pleasure.

I append herewith in tabulated form my report on the number of prisoners received and discharged from this institution during the past fiscal year, the number of prisoners visited by relatives and friends, also a record of the number of visitors shown through the prison during the fiscal year.

Yours respectfully,

CHARLES GULLIVER,  
Captain of the Guard.

**TABLE No. 4.**

Numbers and Names of Deceased Prisoners for Sixty-fourth Fiscal Year, with Cause of Death and Date.

No.	Name	Cause	Date
21001	Campbell, Isaac W.	Cerebral hemorrhage and paralysis	July 17, 1912
24072	Hamilton, Nicholas	Peritonitis, acute	July 18, 1912
23857	Lee, M. I.	Pulmonary tuberculosis	July 20, 1912
24233	Rias, Juan	Pulmonary tuberculosis	July 21, 1912
24930	de la Cruz, Felipe	Pulmonary tuberculosis	July 28, 1912
25057	Torres, Martin	Hypertrophy of heart and arteriosclerosis	Aug. 2, 1912
24642	Kerrigan, Edward	Hemorrhage caused by cutting throat, suicide	Aug. 10, 1912
25590	Sherwood, L. L.	Pneumonia, lobar	Aug. 18, 1912
24849	Riley, James	Bright's disease	Sept. 11, 1912
24009	Truheart, Charles	Pulmonary tuberculosis	Sept. 13, 1912
24609	Delnario, Louis	Strangulation, caused by hanging, suicide	Sept. 22, 1912
24507	Szafesur, Alex.	Execution	Nov. 22, 1912
25511	Rivera, Jose	Pulmonary tuberculosis	Nov. 28, 1912
25436	Williams, Edward	Execution	Nov. 29, 1912
23954	Lin Willie (Chinese)	Execution	Dec. 6, 1912
21334	Condon, John	Fractured skull	Dec. 20, 1912
21866	Collins, Frank B.	Pulmonary tuberculosis	Dec. 27, 1912
25573	Rogers, John S.	Execution	Dec. 27, 1912
25103	Davis, Earl C.	Carcinoma of cæcum	Jan. 15, 1913
12705	Von. Mary (female)	Carcinoma of uterus	Feb. 16, 1913
24920	McNair, James	Valvular heart disease and hypertrophy	Feb. 26, 1913
26188	Henninger, J. G.	Cardiac thrombosis	Feb. 28, 1913
25585	McDermott, George	Valvular heart disease	Mar. 1, 1913
25423	Prantikos, Poolos	Execution	Mar. 14, 1913
23890	Hahn, J.	Pulmonary tuberculosis	Mar. 18, 1913
21034	Champion, C. C.	Apoplexy	Mar. 21, 1913
24616	Pallisson, Peter	Chronic myocarditis	Mar. 27, 1913
25468	Parker, J. M.	Pulmonary tuberculosis	Apr. 13, 1913
26003	Flores, Frederick	Pulmonary tuberculosis	Apr. 16, 1913
24576	Salas, Joe	Pulmonary tuberculosis	Apr. 18, 1913
22044	Ramirez, F.	Tubercular meningitis	Apr. 27, 1913
24694	Wagner, Wm.	Carcinoma of stomach	June 8, 1913

TABLE No. 5.  
Executions During Sixty-fourth Fiscal Year.

No.	Name	Crime	Date of execution
24507	Szafesur, Alex.	Murder, first degree	Nov. 22, 1912
25434	Williams, Edward	Murder, first degree	Nov. 29, 1912
23954	Lin Willie (Chinese)	Murder, first degree	Dec. 6, 1912
25573	Rogers, John S.	Murder, first degree	Dec. 27, 1912
25423	Prantikos, Poolos	Murder, first degree	Mar. 14, 1913

## RESIDENT PHYSICIAN'S REPORT.

---

SAN QUENTIN, CAL., July 10, 1914.

Hon. JAS. A. JOHNSTON,

*Warden, California State Prison, San Quentin, Cal.*

DEAR SIR: I have the honor of submitting herewith, in tabular and written form, report of the Medical Department for the sixty-fifth fiscal year, ending June 30, 1914.

With the end in view of affording the inmates of the prison an equal, if not better chance when they are released, for honestly and efficiently competing in the battle of life than that provided for many people outside the walls, and to turn out of prison men in a physical condition superior to that with which they entered, the medical department has, with the last year, made favorable and encouraging progress.

Instead of the hospital being a place where the "pill and salts" treatment for all ailments was dispensed, as it had been in past years, it has become a modern and up-to-date institution where the latest methods of treatment are in use. And it has been a great factor in restoring physical human wrecks and failures to a place among men with an equal chance for success.

The medical department examines the entrant a short time after he has received a bath, clean clothing and a shave, and has been measured and photographed for the Bertillon records. At the hospital he is as closely examined as though he were an applicant for life insurance, and any deficiencies are carefully noted with the object of correction in view.

### RECORDS.

Permanent records are kept of this examination, on separate leaves, which are placed in folders with the prisoner's serial number attached, and filed in a convenient cabinet. Subsequent to the filing of this record, any incident concerning the health of the individual is noted and placed in his folder.

### REPORT TO CAPTAIN.

A report on the physical condition of the prisoner is made to the captain of the yard who assigns the men to their work. Should certain findings contraindicate work of a certain kind, recommendations are accordingly made, so that no man be given employment that will be injurious to his health.

## OPERATION BOOK.

Should the prisoner suffer from any defect which could be remedied surgically, his name with the ailment and date of examination are placed in a separate operating book. Subsequently, at the earliest opportunity, the patient is placed in the hospital and the operation performed. In this preliminary examination, many remediable illnesses, as hernias, enlarged tonsils, varicose veins, pterygiums, hemorrhoids, varicoceles, sebaceous cysts and circumeisions are noted for future operation.

## MEDICAL CASES.

Should the entrant be affected with any disease, he is immediately sent to the hospital and given suitable treatment, until such time as he is able to be assigned to work.

## OLD MEN.

In case the prisoner is too old to do the work required of him, or in any way incapacitated beyond medical or surgical repairs, he is placed in the infirm ward where he is required to do no work. The number of men so incapacitated has averaged eight for the year.

## TUBERCULOSIS.

About 25 per cent of the prisoners give a history suggesting a probable tuberculous infection. Such patients are also placed in the hospital, where a temperature chart is kept, the sputum examined, and many other means employed to find if they have the infection.

Should a positive diagnosis be made, the patient is immediately transferred to the ward especially maintained for the tuberculous.

If the diagnosis is doubtful, a recommendation is made that light work in the open air be provided, and that quarters be given in a cell well supplied with fresh air.

## SYPHILIS.

Fifteen per cent give a history of having had a syphilitic infection. Should the disease be manifest, treatment with isolation from the other prisoners is given immediately, but should there be doubt, the blood is secured and tested according to the Wasserman reaction.

## GONORRHOEA.

Patients afflicted with gonorrhœa are isolated and treated until cured.

## MORPHINISM.

Addicts to the use of morphine, opium and other drugs are discovered at this examination. Should the prisoner be so afflicted, he is entered in the hospital and given the scopalamine treatment, which is humane, beneficial and efficient.

## TYPHOID.

A history of possible typhoid infection is ascertained. In case the prisoner has not previously been ill with typhoid fever, he is vaccinated against the disease and rendered immune against its attack.

## EYES.

Some of the prisoners upon entrance complain of poor vision. Such cases are referred to the prison optician, who fits them with suitable glasses and in turn refers them to the visiting eye specialists, if the case warrants.

## DENTAL.

The condition of the men's teeth is closely examined. A Dental Department, with the resident dentist and a force of eight inmate assistants care for this phase of the health betterment.

## DETENTION WARD.

A recent innovation in the handling of the new men is the establishment of a Detention or Observation Ward in the recently remodeled hospital. In this ward the entrant is domiciled for a week, or at least long enough for the medical staff to know his physical status. In this time he undergoes the physical examination, receives the typhoid vaccination, and if necessary, that against smallpox also. His blood is tested for syphilis, and everything done in order to find out his physical and mental condition.

In addition to this innovation being a good move from a medical viewpoint, it is of inestimable value from the viewpoint of humanitarianism as well. It demonstrates to the prisoner that a kindly feeling is taken in his welfare, and that the prison officials are his friends, not his enemies. He learns what is expected of him by observation, and instead of going to his assigned duty with hatred in his heart for the officials and society in general, he goes with a better and more friendly feeling and with the intention of obeying orders and conducting himself peaceably and amiably, which in reality is the only proper attitude to obtain in prison.

## HOSPITAL.

The hospital department consists of drug store, examination room, operating room, sterilizing room, laboratory, record room, doctor's office, kitchen, and four wards.

## DRUG STORE.

The drug store is complete with all drugs and medicines necessary for the treatment of the prisoners. The calls at the dispensary average about 110 each day throughout the year. Physics, cough medicine, liniments

and various ointments are chiefly dispensed at the two sick-lines which come immediately after the morning and noon meals. At these times also, ambulatory cases and minor accidents are treated, surgical wounds dressed, and prisoners reporting sick are examined. Such calls average 70 each day throughout the year.

The examination and dressing room is reserved exclusively for the examination of the entering prisoners and for minor surgical dressings. It is modernly equipped.

#### STERILIZING ROOM.

The sterilizing room has recently been equipped with a battery of sterilizers for dressings, utensils and instruments. In it, also, are the surgeons' foot-pedal wash basins.

#### OPERATING ROOM.

The operating room has been entirely remodeled and equipped with all up-to-date appliances and instruments. It has a concrete floor and a cement wainscoting five feet high. Ample light is provided by an electric cluster, and direct sunlight.

#### LABORATORY.

Next in importance is the clinical laboratory, which is provided with germ incubators, hot-air sterilizers, electric centrifuge, microscopes and all other apparatus necessary for the properly carrying on of routine examinations.

#### RECORD ROOM.

A separate room is provided for the record files of the prisoners, and for the use of the stenographer and bookkeeper of the medical department.

#### KITCHEN.

The hospital kitchen, situated on the main floor, has been renovated and re-equipped. A modern French range has been recently installed with a steam warming oven and a hot water tank. Here the food is prepared for all the patients, as well as the staff of the hospital. The food is conveyed to the various wards where it is served. A store room and pantry, equipped with a large refrigerator, serves to keep the food supplies in good condition.

#### WARDS.

There are five wards: The surgical, which has an average of 10 cases each day; the medical with an average of 14; the infirm, with 8; the tuberculosis, with 30, and the detention ward with an average of 3 each day throughout the year. The medical and surgical wards are

supplied with 20 and 15 beds, respectively. They are ample for the cases treated, and are sufficiently equipped, being steam-heated and electrically lighted. The detention ward is separate from the others, and is used for the receiving of the new men, who are held there until passed by the medical department. The infirm ward is a comfortable, sanitary and well-lighted room for the aged and incapacitated prisoners.

#### TUBERCULOSIS HOSPITAL.

A new and modern open-air tuberculosis hospital has been built on the roof of the so-called "Old Hospital," and extends over the entire top of the library building. It covers an area of four thousand eight hundred square feet, and is arranged in the form of two adjacent quadrangles with concrete-floored courts in the center of each. The structure itself is composed of glass, wood and masonry with long eaves for weather protection on the exposed side. The sides facing the court are open, except for removable canvas curtains, while the whole is covered by a shingled roof sloping to the court. The structure is electrically lighted, has modern plumbing, with bathtubs and toilets. The floors are so constructed that they may be washed and scrubbed each day. About 80 patients may be accommodated in this ward.

#### WOMEN'S WARD.

The women's ward for the female prisoners is entirely separate from the hospital department. Cases as they arise are treated in this ward.

#### STAFF.

The staff of the medical department consists of the resident physician and assistant who are free men, and eighteen subordinates who are chosen from among the prisoners according to their qualifications and efficiency. The superintendent of the hospital is general overseer of the department and is next in line after the resident physician and assistant. It is his duty to see that all orders are carried out, and to supervise the nurses, as well as to aid in the sick calls and surgical operations. The laboratory assistant does the routine pathological work, assists also in the sick line and remains in the new prison at night, where he can be on call in case of illness there. The superintendent and the laboratory assistant, as well as some of the nurses, are graduates of well known and recognized medical colleges.

There are in all eight nurses, five for the medical and surgical wards and three for the tuberculosis and infirm wards. The druggist, who is a graduate pharmacist in charge of the dispensary, compounds medicines under the direction and supervision of the physician and assistant.

## BOOKKEEPER.

On account of the numerous records to be kept, reports to be rendered, and general clerical and stenographic work to be done, an expert is in charge of this division of the department.

Besides the above enumerated, there are two cooks, one waiter, two janitors and one barber.

## ADMINISTRATION.

The administration of the department has been reduced to a system whereby a routine is established. Every morning there are the two sick lines to receive attention, rounds to make in the wards, visits to be paid to the prisoners kept in confinement, reports to make, inspections of prison cells and grounds, and numerous other duties. Venereal clinics are held Tuesday afternoons, major operations on Wednesday, examination of new men on Thursday and Monday, naso-oto-rhinological operations on Friday, and minor surgery on Saturday. Aside from this regular order, emergency cases are treated as they may arise.

The sanitary survey by the resident physician and assistant is made each week at unstated times. Sewers, toilets, cells, working and congregating places of the men, bathhouses, gardens, stables, dining rooms and kitchens are all inspected. Any breach in sanitation is reported to the warden who orders it quickly remedied.

Special squads of men are detailed to the improving of the sanitary conditions of the prison. One squad under the supervision of a guard, thoroughly scrubs the floors of the new prison each day, another squad of cell-tenders cares for an assigned tier of cells, another does nothing but whitewash, a fourth cares for the disposal of the garbage, which is each day burned or equally well disposed of, while a fifth squad consisting of eight men, repairs gutters, chops weeds and grass and does all kinds of odd jobs of a sanitary nature.

## BATHS.

Each prisoner is required to take a bath every week. For this purpose hot salt water showers are provided. In addition to this, there is a salt water swimming pool in which the prisoners may bathe ad libitum.

## SURGICAL.

In reviewing the surgical aspect of the year, mention may be made of a number of operations which were performed for the good of the men.

Many of the entrants suffer from hernias which they were unable to have cured on the outside. Over 35 were operated on and cured of this defect.

One hundred pairs of tonsils were removed. It has been demonstrated by these cases that men who suffered from throat trouble were greatly benefited by this procedure.

Every Saturday afternoon, any person who so desires may have the privilege of being circumcised. Ninety men have availed themselves of this, and all attest to the good results and cleanliness of such.

Many men have at some time been so struck on the nose that the cartilagenous septum has been deflected, causing impaired or mouth-breathing. For the betterment of these conditions, over 35 submucous resections on the nose have been performed.

Appendicitis is not uncommon, 16 operations having been performed during the year.

Aside from the above-mentioned, there have been numerous cases of varicose veins, varicocele, hemorrhoids, fistulas, etc.

Two gastro-enterostomies for ulcer of the stomach, one craniotomy, and ten amputations of various kinds have been done.

Aside from the usual operations, there is a large number of minor injuries for which no operation record is kept. In a large institution of 2200 men in varied occupations, numerous accidents occur, such as contusions, sprains and bruises.

#### SURGICAL OPERATION COSTS.

Based on the fee list of the San Francisco County Medical Society, the minimum prices which would be charged on the outside for the surgical operations performed in the prison hospital would average \$3,700 each month, or approximately \$45,000 for the year. The maximum allowed averages \$16,000 a month or approximately \$192,000 a year.

#### MEDICAL.

Medically, there have been no epidemics, and very few serious illnesses. Influenza is the disease which attacks the inmates mostly. Very few cases of pneumonia have occurred, due to the fact that a close surveillance is kept over the men, and any one with premonitory symptoms is treated in bed in the hospital.

There has been no typhoid fever. A few cases of malaria have been treated.

Indigestion and enteritis are frequently diagnosed.

The number of tuberculosis patients has increased in the past year. This is due to the fact that fewer of them have died, that the incipient cases are discovered early, and that the prison population has increased. With the bettered sanitation, and better housing facilities, the number should gradually decrease.

It is a fact, that of the 26 cases discovered during the past year, one third of them were diagnosed as such by physical and laboratory exami-

nations on their entrance to prison, and were immediately given treatment. This fact controverts the opinion frequently expressed that all cases develop in prison.

#### DEATHS.

The death rate has been about two thirds what it was the preceding year. There were four executions, one violent death, one of pneumonia, and seven of tuberculosis, besides other casualties.

The rate is 10 deaths per 1,000 population, including executions, as compared to 14.5 throughout the state. Or, excluding executions, it is 8.18 per 1,000 population, or four sevenths of what it is outside.

#### LECTURES.

The medical department has established a course of lectures pertaining to medical subjects, dealing principally with the care of the body, hygienics, prophylaxis and general sanitation. Prominent men from among the profession have gratuitously given their time to deliver talks along these lines.

The work of the department has been facilitated by the efforts of a number of public-spirited physicians, who have aided in many ways in improving the department and aiding the prisoners. It is proper that thanks be extended to them.

Dr. R. A. Peers has given valuable suggestions on care and prevention of tuberculosis, as also has Dr. G. R. Hubbel, who, in addition, has given expert advice regarding the purchase and maintenance of the X-ray apparatus.

Drs. A. S. and L. D. Green have kindly visited the prison once a month and held clinics on their specialties of diseases of the ear, eye, nose and throat.

Dr. J. M. Wolfsohn has examined a number of the inmates afflicted with nervous diseases.

Thanks is due to Dr. L. S. Mace for valuable advice in regard to the tuberculosis situation, and also for the initiation of the pneumo-thorax operation for tuberculosis.

Dr. R. L. Rigdon of Stanford University Medical Department has on several occasions visited the prison and has performed operations in his specialty.

Dr. A. S. Goldman delivered a lecture on social hygiene.

Dr. E. D. Chipman has held clinics on skin diseases.

Prof. F. R. Gay of the University of California has kindly cooperated in vaccinating the inmates against typhoid fever and has furnished a quantity of the vaccine.

The State Board of Health has done a number of Wasserman reactions for syphilis, and has also given typhoid vaccine for immunization.

Dr. G. L. Boalt is especially to be thanked for her kindness in examining gratuitously each week the blood of inmates according to the Wasserman reaction for syphilis.

For whatever of success that has been obtained in the medical department during the past year, appreciative mention should be made of the staff of inmates employed in the department for their earnestness and zeal and willingness to further the aims and purposes of it; to the assistant resident physician, Dr. F. Stolle, for his untiring and skilful efforts in administering to the sick; and to Warden James A. Johnston, who has given his hearty support and loyal encouragement to plans and suggestions for the improvement of the hospital and sanitary conditions of the prison and the physical betterment of the inmates.

Respectfully submitted.

L. L. STANLEY, M.D.,  
Resident Physician.

## CHAPLAIN'S REPORT.

SAN QUENTIN, October 8, 1914.

To the Honorable JAMES A. JOHNSTON,

Warden of State Prison at San Quentin, California.

SIR: I have the honor to submit herewith the report of the resident chaplain of the state prison at San Quentin, for the year ending June 30, 1914. Having been in my present position only a short time, this report will be made up from records found in the office when I entered it, and from observations made subsequent to the time included in the report.

The chaplain is appointed to superintend the work of the library and the educational and religious activities of the institution.

### THE LIBRARY.

The following tabulation covers only the year comprehended in this report and shows the progress and present status of the library equipment and service:

On hand June 30, 1914----- 7,084 books

On hand June 30, 1913----- 5,612 books

Gain during the year----- 1,472 books

The gains are distributed as follows:

	Purchase	Gift	Total
Fiction .....	82	704	786
Technical .....	21	294	315
Religious .....	0	76	76
Magazines .....	276	4	280
Miscellaneous .....	12	307	319
Total .....	391	1,385	1,776
Discarded during year .....			304
Gain .....			1,472

Total issue of books during the year 125,600; an average of 10,466 volumes per month. There are 1,375 inmates who are drawing books regularly, and about 50 employees also avail themselves of the privileges of the library.

The system of distribution of books has been changed, so that instead of the men coming to the library to receive their books over the counter as heretofore, the books are now delivered by the library attaches direct to the cells. This plan makes for greater efficiency and has resulted in a much wider circulation of the better grades of the literature of the department.

In addition to the donations of books noted in the figures of the report, there have been several large contributions of miscellaneous magazines to the library, which have been distributed among the men, particularly to those in the hospital, and we acknowledge here, our indebtedness to the donors. We believe that the library is one of the very important factors in making for good discipline, as well as for the culture and comfort of the inmates, and that it should be most liberally maintained. Besides the general library, there is a separate Catholic division, for the special use of those of that faith, but to which men of any creed have ready access. This report does not include record of that section and the wide service which it renders to the men.

#### THE EDUCATIONAL WORK.

Our day school has been obliged to suspend activities during the summer because of the construction and repair work going on upon the building in which our library and chapel are located. However, when last operating, it was being successfully conducted with 99 students enrolled. As the work of renovation is now practically complete, we are expecting soon to renew class sessions and are having frequent anxious inquiries from the men concerning same. The importance and value of the school work can not be too much emphasized. Three large rooms are now used for night school accommodating 89 men; one of these is for the colored race. Classes are well conducted and careful records are kept of the work done. There is a keen interest in this work and we continually have a waiting list of those who have applied and are eager to gain entrance to these rooms for the educational opportunities they afford. These men are taken care of as soon as vacancies in the rooms make it possible for them to be moved in.

The correspondence courses which have been placed at the service of our men by the University of California are being taken by over 25 per cent of the inmates of the institution. Too much praise can not be given to the present administration and the state university for the consummation of this plan, which places such unusual advantages within the reach of our people. There have been 342 enrollments in the academic, and 236 in the agricultural courses. Many of the students are doing most excellent work.

A club has been organized by the men taking agricultural courses, which meets every Saturday afternoon to hear lectures on practical subjects and for mutual benefit in class work. In the academic courses also, classes are conducted Saturday afternoons, and on four evenings of each week, to assist and supplement the university work of the students.

One of the professors of the university is present every week, to conduct class work; another every two weeks, and special lecturers come frequently to address the students upon matters of practical interest.

We recently issued from the printing department an Educational Bulletin announcing the educational opportunities presented to the inmates of the institution, a copy of which was placed before every man here. The result was an immediate response of numerous applications from the men for enrollments, and as a result, the membership of the classes will be greatly increased, and new classes will have to be organized to accommodate all who have applied.

The problem of finding right teachers here at times has been somewhat difficult, but by careful selection we have succeeded in getting men of training and experience who are doing excellent work.

#### MORAL AND RELIGIOUS INTERESTS.

Religious services are being conducted every Sunday morning at nine o'clock. These meetings are in charge alternately of the resident chaplain and the visiting chaplain, the Rev. Father Foley, or one of his assistants. The Salvation Army and the Theosophical Society have conducted meetings monthly, and the Rev. R. U. Evjenth preaches once a month in the Scandinavian tongue to those who are familiar with that language.

An hour every Sunday is devoted to the meeting of the San Quentin Christian Endeavor Society, the largest society of that organization in the state. Many workers have given helpful service, among whom should be mentioned Brigadier-General Wood, of the Salvation Army, Mr. A. G. Mueller, of the Christian Endeavor Society, and Dr. Geo. Hunter of the Los Angeles Bible Institute. The latter conducts a Bible study class for one hour every Saturday afternoon. Rabbi Martin A. Meyer and his representatives have faithfully ministered to the Jewish inmates of this institution. Mrs. Morton, representing the Christian Scientists, and some of the lady officers of the Salvation Army have visited the women's department and held meetings there. The resident chaplain also conducts a service there every two weeks.

In addition to the foregoing, a large number of religious workers have addressed the men, and illustrated lectures on subjects of travel and of physiology and hygiene have been given by various speakers at different times. These have been of great practical interest and benefit to the men.

Personally, I feel very much gratified at the response of the men to the challenge of their religious opportunity. Without pretense or hypocrisy, many of them are living earnest, sincere Christian lives. There is a spirit of very great appreciation on the part of many of the men for the opportunities accorded them; and the improved and improving moral conditions are a matter of common comment among them. There is a large attendance and most excellent attention at the religious services.

I have had assurance from a goodly number that they are fully determined to lead a better life and their daily conduct is demonstrating the sincerity of their assertion. In my personal interviews with the incoming prisoners, as each one passes through my hands, I earnestly seek to impart the truth and influence which will tend to turn life's trend for them in the right direction, and I am sure that my efforts have not all been in vain.

I wish, sir, to acknowledge my personal indebtedness to you for the fine consideration and gracious courtesy that you have shown me as I have sought to perform the work of this most important office. It is a pleasure, and an honor, to labor under a superior whose ideals are so high and worthy as those which you have persistently and consistently impressed upon me and desired that I should uphold in the work of my department.

I also record my grateful appreciation of the courteous and helpful spirit manifested by your officers, particularly the captain of the yard, S. L. Randolph.

Trusting that this department may continually show increased efficiency and helpfulness in the institution, this report is very respectfully submitted.

A. C. SHEPHERD,  
Chaplain and Educational Director.

## DENTIST'S REPORT.

---

SAN QUENTIN, CAL., June 30, 1914.

Hon. J. A. JOHNSTON,

*Warden of the State Prison, San Quentin, California.*

SIR: I have the honor to submit herewith the annual report of the Dental Department, for the sixty-fifth fiscal year ending June 30, 1914.

As this is the first year of the existence of a dental department at a California penitentiary, the report is made as full as the conciseness requisite in an article of this character will permit.

This in order to make known the nature and extent of work being performed and to serve as a guide for future endeavors along this line.

For years past the dental care of the inmates has been provided for by a visiting dentist, who spent one half day per week at this institution.

The equipment provided consisted of a makeshift non-adjustable chair, cabinet, foot engine, a few instruments and a complete set of forceps. Dental work was performed in a corner of the operating room of the hospital. The treatment comprised crowns, bridges, dentures, fillings and extractions; regular fees were exacted from the inmates. In certain meritorious cases, the patient being indigent, work was performed at state expense. This was the condition existing at the time a resident dentist was engaged.

At the present time the dental department consists of a resident dentist and seven assistants chosen from the inmates, one anesthetist and record clerk, one operator, two chair assistants and three laboratory workers.

We are equipped as follows: One installation complete in every detail, representing the most modern and high class apparatus obtainable. Every possible facility for the accomplishment of rapid and efficient work and for the relief and mitigation of pain is provided. One second equipment, less complete:

A laboratory equipped with every machine and device necessary for the performance of any mechanical dental operation, in addition to which are many improvements designed and constructed at this institution.

### DEMAND FOR SERVICE.

There are at the present time 2,209 inmates at this institution; in the past six months 613 have entered; 360 released. The average monthly increase is therefore 41. Ninety-one per cent require attention.

For further details consult table appended.

## SERVICE RENDERED.

Every man who enters this institution receives a thorough dental examination. The condition of each individual tooth and the general condition of the oral cavity is recorded on charts provided for the purpose. Patients are treated in the order of their application for service. Two classes of work only take precedence over this regulation: First, emergency cases, and second, the men being released are given as much attention as possible in order to equip them for their struggle to make a new start.

Cement and amalgam fillings, dentures and clasps, extractions, local and general anesthetizations of all characters and treatments are rendered free of charge to the inmates. Gold and porcelain crowns and bridges, gold fillings, etc., are provided the prisoners at a charge only to cover the more expensive material. In certain cases, at the discretion of the warden, this work is allowed in the event the patient be indigent. The cases designated by the warden as being entitled to consideration for this work are:

*First*—Cases of extreme urgency.

*Second*—Cases of meritorious service.

*Third*—Cases of life prisoners.

*Fourth*—Cases of mutilation in the prison.

The extent of service rendered may be learned from the tabulated report appended.

## PROSPECTUS.

The dental department at the present is situated in temporary quarters, occupying a room 12 feet by 30 feet. Permanent quarters are nearing completion. They will provide three offices and one laboratory covering a space of  $21\frac{1}{2}$  feet by  $33\frac{1}{2}$  feet. The rooms are well lighted and ventilated and are modern and hygienic in every respect.

These quarters will permit the continuous operation of seven chairs and the laboratory will furnish room for six mechanical assistants to work. There are in the department at present, two expert laboratorians. These men train in assistants who work with them and who will take their places and continue the work when their time expires.

In conclusion, I wish to express my appreciation of the support and encouragement received from Warden J. A. Johnston. His personal interest and advice has made the conduct and development of this department a pleasure and rendered the present condition possible. Thanks is also due to the captain of the yard and other officials for their cooperation, and finally I want to express my gratitude for the help rendered by my assistants, who have labored diligently in the service of their fellows without thought or hope of compensation.

Respectfully submitted.

F. V. SIMONTON,  
Resident Dentist.

## STATE PAROLE OFFICER'S REPORT.

SAN FRANCISCO, CAL., December 1, 1914.

*To the honorable, the State Board of Prison Directors.*

GENTLEMEN: I have the honor to report to your honorable board with regard to the success attained by the parole system. It has been a source of much gratification to me. We are receiving the hearty cooperation of employers of labor. Our list of employers includes the largest and most influential firms of the state. There is no distinction made between our men, who are compelled to disclose their identity, and the men who seek their employment on their own accord, and whose identity is a closed book.

With few exceptions, peace officers of the state are in hearty accord with our work, and lend every assistance possible in the handling of our men.

Assembly Bill No. 274, Chapter 584—"An act to add a new section to the Penal Code of the State of California, to be numbered six hundred fifty *a*, relating to exposure or threats of exposure of paroled or discharged prisoners"—passed during the 1913 session of the Legislature for the protection of paroled and discharged prisoners, has caused designing persons to be very cautious before disclosing the identity of any one who has been convicted of a felony and sent to the penitentiary.

Our method of determining the whereabouts of our men and of keeping in immediate touch with their employers, keeps us practically in daily touch with the conduct of the men, their environment, and daily life.

I have learned, in perusing the rules and requirements governing men on parole in many states in which parole systems are in vogue, that our rules, as promulgated by your honorable Board, are most complete in every detail, and cover minutely every point required to assist prisoners on parole to rehabilitate themselves as useful members of society.

With the gradual increase of prisoners on parole—355 in July, 1911, to 610 in July, 1914—I take pleasure in reporting that the expense in maintaining our department has not materially increased. We are prepared to handle a much larger volume of business with practically no additional expense. In July, 1914, 15.4 per cent of the prison population were on parole and serving their terms out of prison in this state.

The Legislature at its 1913 session appropriated \$35,000 for use by the State Board of Prison Directors in aiding paroled and discharged prisoners, and for defraying the expenses of the parole system. This sum became available for use in August, 1913, and the following statement shows in detail the expenditures made from this fund to July 1, 1914:

## DETAILED STATEMENT OF DISBURSEMENTS FROM PAROLE FUND FOR THE FISCAL YEAR ENDING JUNE 30, 1914.

Tools			\$15 00										15 00
Transportation				\$9 00			5 00	11 50	5 00	5 00			35 50
Board, lodging, etc.			3 75	3 00	9 10	8 40	3 75	6 50	5 00	26 40	10 00	8 50	84 40
Cash			1 50		10 50	1 50							13 50
Sundry			19 85					75			50		21 10
Totals		\$40 10	\$40 10	\$12 00	\$25 10	\$11 15	\$10 75	\$23 60	\$14 00	\$34 65	\$15 50	\$8 50	\$194 75
Totals, both prisons		\$92 45	\$178 20	\$99 75	\$110 10	\$38 45	\$81 50	\$89 00	\$99 20	\$108 25	\$82 00	\$37 00	\$1,015 90
Total disbursements		\$468 14	\$1,021 52	\$1,045 58	\$1,009 06	\$1,137 29	\$870 60	\$956 98	\$898 30	\$779 80	\$900 19	\$891 24	\$10,088 70

All moneys expended in support of the parole system prior to August 1, 1913, will be found in the reports of San Quentin and Folsom prisons, disbursements having been made previous to that time from the funds of these institutions.

That the parole system is a great saving to the state financially, is evidenced by the following:

#### SAN QUENTIN PRISON.

Average gross cost per capita per annum in prison-----	\$120 81
373 prisoners on parole on November 1, 1914-----	45,062 13

#### FOLSOM STATE PRISON.

Average gross cost per capita per annum in prison-----	\$119 229
208 prisoners on parole on November 1, 1914-----	24,799 63
Total cost per annum for 581 prisoners on parole if confined in the state prisons-----	69,861 76
Total cost two years for 581 prisoners with present average_	139,723 52
Appropriation allowed -----	35,000.00
Saving to state, two years-----	104,723 52

We take extreme pride in calling your attention to the fact that we have kept within the appropriation allowed this department, and expect to have a balance from same to be returned to the state treasury at the termination of the present fiscal year. We desire to thank the State Board of Control for its invaluable assistance to us in the systematizing of the accounting of this department.

Respectfully submitted.

ED H. WHYTE,  
State Parole Officer and State Agent.

Biennial Report

OF THE

State Prison at Folsom

---

## WARDEN'S REPORT.

STATE PRISON AT FOLSOM, December 20, 1914.

*To the honorable, the State Board of Prison Directors.*

GENTLEMEN: The accompanying reports of the various heads of departments of Folsom State Prison for the sixty-fourth and sixty-fifth fiscal years ending June 30, 1914, together with the following statement dealing with present conditions at this institution and recommendations for further improvements, etc., are respectfully submitted for your consideration:

## POPULATION.

Our constantly increasing prison population reached the daily average of 1134.32 for the two fiscal years, being a gain of 44.25 over the two preceding years. On March 17, 1914, 1199 men—the largest number in the history of the prison—were confined here.

## DISCIPLINE.

Taking the prison body as a whole, the discipline maintained here has been excellent. Only occasionally do we find it necessary to take issue with an inmate because of wilful infraction of the prison rules; aside from a threatened outbreak among a number of offenders placed in solitary confinement early in the spring of 1914, there has been no serious disturbance of any nature whatsoever among the inmates. This is quite encouraging in view of the fact that corporal punishment has been abolished absolutely—a step at one time considered quite impossible. Cells formerly reserved for offenders undergoing punishment are now occupied by prisoners in good standing. Fewer prisoners were confined in solitary (the most severe measure now resorted to at Folsom Prison) during the last twelve months of the biennial period than during any similar period in the history of the prison.

## HEALTH.

In spite of the over-crowding of cells, necessitated by the ever-growing prison population, the general health of our inmates has been excellent. While our average daily population for the past two years has been well over the eleven hundred mark, only twenty-four deaths resulting from sickness and senility occurred during that time. We attribute the general good health of prisoners confined here to wholesome food, improved sanitary conditions and the efficiency of our medical staff.

## VENTILATION.

A system of ventilation, recently installed, is one of the most important improvements undertaken at the prison in recent years. A six-inch cylindrical duct, leading from an exhaust grill with which each of the three hundred and seventy-three cells is provided, connects with a main over each tier. The mains, in turn, unite at the joining of the buildings, where an electrical fan exhausts into the outer atmosphere. To render this system entirely satisfactory, however, we found it necessary to drill fifty-six three quarter inch holes through each of the three eighth inch boiler plate doors, for the intake of pure air from the spacious corridors outside.

## IMPROVEMENTS INSIDE MAIN BUILDING.

A modern concrete lavatory, together with concrete wash and bath rooms, has been built inside the prison building; cells have been thoroughly renovated, balconies repaired and walls painted. Extensive improvements have been made in the large room reserved as sleeping quarters for elderly inmates and the prisoners whose terms are about to expire.

## MEDICAL.

We have been untiring in our efforts to provide the inmates with the best possible medical and dental attention. A salaried citizen physician carefully examines each arrival, passes upon each prisoner's fitness for work, conscientiously records such data as may be considered of importance, or, in the event of physical deficiency, recommends such treatment as may be necessary.

Our dispensary has undergone a complete remodeling, provision being made for a suitable operating room, consultation room and new lockers for medicines and medical supplies.

For the proper treatment of tubercular patients it is urgent that steps be taken toward the establishment of a special ward. Up to the present time we have been unable to segregate patients so afflicted as carefully as is desired.

The Dental Department, operated in connection with the Medical Department, is in charge of a salaried citizen dentist, who resides at the prison.

## NEW BATH HOUSE.

A new bath house, built of concrete, fills a long felt want. This model structure, situated alongside the chapel, is provided with swimming pool and showers; six bath tubs, for old and infirm inmates, have also been installed. In a room, properly separated from the foregoing, are six additional tubs, which, as a proper precaution, have been reserved for the use of persons afflicted with blood and skin diseases.

## PRISON SCHOOL.

The successful operation of our newly established prison school has been most gratifying. Arrangements have been made to enable prisoners so inclined to take up any of the elementary branches, and frequent donations of textbooks by sympathizers outside the prison have materially aided us in the carrying out of our educational program. An instructor from the University of California visits the school at regular intervals, overseeing the work accomplished and offering suggestions as to further improvements along this line. Feeling that illiteracy is in a large percentage of cases responsible for men's criminal careers, we propose placing within easy reach of such inmates as earnestly desire it, a training that will enable them to earn an honest living—an education neglected or denied them in their boyhood.

## LIBRARY.

On the shelves of our prison library we now have upward of thirty-four hundred volumes comprising wholesome fiction, poetry, biographies, textbooks, etc., to which all the inmates have access. In addition to the reading matter catalogued, we receive regularly over two hundred periodicals, which are distributed daily from cell to cell.

## NEW BUILDINGS COMPLETED.

In a new stone extension leading from the lieutenant's office, we have installed our photograph gallery, printing office, officers' and guards' barber shop, clothing room and Bertillon room. Suitable quarters for these departments have long been needed and the completion of the undertaking has greatly facilitated the better handling of the large amount of work attended to there.

Of minor importance are the following:

- Lower yard barber shop (concrete).
- Warehouse (frame).
- Commissary counting post (concrete).
- Counting post at back gate (concrete).
- Guard post (frame).

## NEW BUILDINGS IN COURSE OF CONSTRUCTION.

*New Cell Building.*—It affords us pleasure to report that work on the new cell building is now well under way. Work on the cells proper is practically complete, and a force of men is now engaged in rushing the construction of the outer wall as rapidly as rock can be quarried and cut. This building, when ready for occupancy, will accommodate five

hundred and twelve prisoners, one man to a cell. Each cell will be equipped with steam heat, running water and complete sewer connections.

#### PRISON WALL.

Every possible delay has been avoided in the building of the substantial stone wall that will ultimately enclose the prison buildings and the grounds immediately adjacent. Nearly one thousand lineal feet of work were added to the amount already reported.

#### GENERAL REPAIRS.

Our campaign of repairing, overhauling, rebuilding and remodeling has extended to practically every structure of any description on the prison grounds. All of the officers' and guards' residences have been repainted, papered and shingled; new hardwood floors have been laid at the officers' and guards' mess, and sleeping quarters for employees have been enlarged and renovated. Many of the offices have been remodeled and further improvements are now under way.

#### FARM AND STOCK DEPARTMENTS.

Each succeeding year it has become more apparent that the quarrying of rock as an expense reducing proposition must ultimately be abandoned and attention concentrated on some other industry. As we manufacture nothing for sale, the idea of *earning* money is out of the question. Situated as we are we can hope only to effect a *saving*, and the only feasible plan is suggested by the success that has attended our efforts in the farm and stock departments. During the past two years we have conclusively demonstrated the wisdom of devoting more time and attention to extending the scope of work in the raising of vegetables, fruit, hay, tobacco, broom corn, etc.

As a matter of experiment, we last year planted one and one half acres to tobacco. The crop gathered amounted to eleven hundred pounds and is of excellent quality.

We have succeeded in growing sufficient first grade broom corn for about one hundred dozen brooms.

The stock at the poultry ranch has been increased by about seven hundred chicks.

Seven yearlings and ten calves have been added to our dairy herd and modern ideas in care and feeding have been carried out in this department. A modern new dairy barn, of concrete, with silo adjoining, has been erected and affords accommodation for fifty milch cows. The dairy is fitted out with a new separator, churn and other equipment necessary to the proper handling and storing of dairy products. This building has been wired for electric lighting.

On our hog ranch—a seventeen acre tract set apart from the rest of the prison ranch—we have seventy-five hogs. Four concrete hog cots were built during the past year.

One hundred and forty acres of heretofore unused land have been cleared of brush and stone, cultivated and sown to barley and oats, making a total of two hundred and forty acres now under cultivation. During the past year practically all the hay required for the feeding of our live stock has been grown on the prison ranch.

All of the onions, cabbage, turnips, carrots, radishes, lettuce, squash, etc., consumed at the prison were grown here; the attempt to raise potatoes and beans, however, did not bring such satisfactory results.

One mile of roadway on the prison property has been graded and about three hundred feet graveled.

✓ Prison labor graded the county road bordering the farm, accomplishing at a cost of \$190.00 improvements that would have cost the county approximately five thousand dollars otherwise.

#### RECOMMENDATIONS.

In view of past successes in the farm and ranch departments, the small saving already shown by reason of the growing of vegetables, fruit, hay and grain, might be greatly augmented at a comparatively small cost to the state. Your attention is respectfully called to the good quality of the land, the large acreage afforded and the vast saving that through proper cultivation of the tract now lying idle might easily be effected. True, the entire ranch is more or less rolling; much of the land is dotted with unsightly boulders; timber and brush fit only for firewood cover still other patches, but the greater part of the unused soil could be converted into producing acres. The system of irrigation now in vogue is carried on by means of a series of ditches, requiring constant repair—a plan that has proved very unsatisfactory by reason of the unevenness of the land cultivated. It has long been our desire to inaugurate an improved method of bringing water to idle land and to the cultivated area that might be made to yield more abundantly. Properly irrigated, the land would produce double the crops now harvested. For the purpose of carrying out this plan at the earliest possible moment, we now have on hand about \$1,500 worth of four-inch and six-inch pipe, and an additional expenditure of \$3,000 would secure enough more to thoroughly irrigate all the tillable land. With needed improvements attended to, we could profitably employ one hundred and fifty or two hundred prisoners at raising garden truck, etc., for prison consumption, or for shipment to other state institutions.

Brooder, incubator and chicken houses and considerable additional wire fencing are required at the poultry ranch, where we would like to extend the scope of work undertaken.

A new stable, to replace the unsightly frame structure now in use, should be erected; a feed barn, for which we already have some material on hand, is needed at the dairy ranch.

#### APPROPRIATIONS REQUESTED.

It is urgent that the following appropriations be asked of the State Legislature to carry on the work during the sixty-sixth and sixty-seventh fiscal years:

New bake ovens-----	\$5,000 00
Live stock -----	4,500 00
Farm buildings -----	1,500 00
Refrigerating plants -----	6,000 00
Repairs and improvements -----	20,000 00
Reconstruction of electrical equipment of power house-----	31,000 00
Expenses of changing from coal to oil burners-----	2,000 00
Horse barn and storage sheds-----	12,000 00
Furnishing and decorating warden's new residence-----	4,000 00

#### GENERAL APPROPRIATIONS.

Support -----	305,000 00
Salaries -----	208,000 00
Printing -----	2,000 00

#### CONCLUSION.

For the hearty cooperation of the officers and guards of Folsom Prison, who have rendered such faithful service in furthering our plans for the inmates' care and the economical management of the affairs of the prison, much credit is due. To the members of the State Board of Prison Directors we are indebted for the success that has attended our efforts in the general improvement manifested; the Board's policy of fair and humane treatment of men under confinement can not be too highly commended. The prison administration and inmates alike owe a debt of gratitude to Professor M. J. Jacobs, of the University of California, for the gratuitous aid resulting from his frequent visits to our school. Greatly appreciated assistance has been rendered by Doctors George A. Briggs, C. B. Jones, June Harris and Robert G. Pearson, of Sacramento, who, at considerable expense to themselves, visit the prison from time to time, donating their skilled services whenever required.

It is our hope to further gain your favor and receive your continued cooperation.

Respectfully,

J. J. SMITH, Warden.

## CLERK'S REPORT.

---

OFFICE OF THE CLERK,

REPRESENTA, CALIFORNIA, February 4, 1915.

*To the honorable State Board of Prison Directors.*

GENTLEMEN: I am submitting, in the following pages, the financial report of the California State Prison at Folsom for the sixty-fourth and sixty-fifth fiscal years. This report embodies:

*Schedule A.*—Cash receipts and disbursements for the sixty-fourth fiscal year, showing general classification of the sources of income and the purposes of expenditure.

*Schedule B.*—Same as the foregoing for the sixty-fifth fiscal year.

*Schedule C.*—A comparative exhibit of the gross and per capita cost of maintenance; of salaries; and of the aggregate for the entire life of institution, under the different wardens, and brought down to the close of the sixty-fifth fiscal year.

*Exhibit A.*—An exhibit for the sixty-fourth and sixty-fifth fiscal years of the cost of operating the ranch and the benefit to the state from such operation, based upon values placed upon each and every kind of product as determined by your board. There is also submitted an addenda showing the production in detail.

*Exhibit B.*—An exhibit for the sixty-fourth and sixty-fifth fiscal years of the cost of operating the quarry, the income derived from the sale of products, and the loss to the state from such operation.

Your attention is directed to the brevity of the report. From the system of accounts in vogue, a reliable analysis of the figures in greater detail could not be secured. It is to be expected, however, that the next biennial report to be submitted will be susceptible of greater elaboration, because of the system of accounts prescribed and installed by the State Board of Control, with the beginning of the sixty-fourth fiscal year.

Respectfully submitted.

J. S. JACOBS,

Clerk State Board of Directors.

## EXHIBIT B.

## Comparative Statement of Operating Cost and Income Quarry, Sixty-fourth and Sixty-fifth Fiscal Years.

	Sixty-fourth year		Sixty-fifth year	
Gross receipts from disposed products.....		\$3,418 01		\$2,773 81
From sale to outside persons.....	\$2,642 98		\$1,999 21	
From credits by material, etc., furnished other departments .....	775 03		774 60	
Deduct cost of operation.....		928 16		1,794 52
Being gross excess of receipts over cost		\$2,489 85		\$979 29
Deduct cost of salaries and board of three guards and one quarryman.....		4,020 00		4,320 00
Net deficit .....		\$1,530 15		\$3,340 71

The above figures do not include maintenance cost of prisoners employed in the quarry.

## PHYSICIAN'S REPORT.

---

STATE PRISON AT FOLSOM, December 31, 1914.

*Hon. J. J. SMITH, Warden.*

DEAR SIR: I herewith transmit report of prisoners treated by the Resident Physician of this prison for the two fiscal years ending June 30, 1914, showing office visits and cases treated in the hospital, number of those excused from daily labor on account of illness, and the mortality list.

Respectfully,

D. A. FRASER, M. D.,  
Resident Physician.

TABLE No. 1.

Deaths—July 1, 1913, to June 30, 1914.

Date	Number and name	Age	Cause of death
1913—July 7	7841—Legay, V. ....	41 years	Acute paranchymatous.
July 8	6829—Curtis, Henry .....	73 years	General paralysis.
July 11	6791—Oppenheimer, J. ....	40 years	Legal execution.
July 30	8476—Wagner, Gus .....	28 years	Intussusception.
Aug. 15	7060—Irwin, Chas. ....	86 years	Senility.
Sept. 14	7228—Comanche, Geo. ....	52 years	Pulmonary tuberculosis.
Oct. 7	6280—Salazar, Jose .....	60 years	General paralysis.
Oct. 9	6022—Deem, Geo. ....	57 years	Pneumonia.
Oct. 26	8015—Hayward, Robt.* .....	26 years	Pulmonary tuberculosis.
Nov. 13	7988—McKinna, Wm. ....	45 years	Cancer of intestines.
1914—Jan. 13	8478—Vallez, Manuel .....	25 years	Pulmonary tuberculosis.
Feb. 14	8848—Seratta, P. ....	24 years	Pulmonary tuberculosis.
Apr. 4	8432—Hair, N. C. ....	17 years	Gunshot wounds.
Apr. 4	8471—Lucirica, J. ....	28 years	Gunshot wounds.
Apr. 4	8706—Blade, R. ....	19 years	Gunshot wounds.
Apr. 4	8956—Siprell, E. W. ....	21 years	Gunshot wounds.
May 4	8673—Lopez, Juan C. ....	42 years	Pulmonary tuberculosis.
May 8	8202—Alonzo, R. ....	38 years	Accidentally drowned.

Total number of deaths, 18.

\*Negro.

TABLE No. 2.

Deaths—July 1, 1912, to June 30, 1913.

Date	Number and name	Age	Cause of death
1912—Aug. 14	6811—B. Cisneros .....	32 years	Pulmonary tuberculosis.
Aug. 17	6751—Richard Reed .....	59 years	Pulmonary tuberculosis.
Oct. 9	7959—E. H. Weitzel .....	39 years	Death by drowning.
Nov. 1	7642—Jos. Strum .....	64 years	Cerebral hemorrhage.
Nov. 9	7607—Henry Smith .....	43 years	Lues.
Dec. 6	8305—Edward Delhantie* .....	26 years	Strangulation—legal execution.
Dec. 9	7359—W. D. Miller .....	41 years	Lues.
1913—Feb. 7	8086—Gus Borries .....	57 years	Pulmonary tuberculosis.
Mar. 24	7949—Wm. Ditton .....	63 years	Fatty degeneration of heart.
Mar. 28	1070—Wm. Howard .....	63 years	Chronic parenchymatous; nephritis.
Apr. 21	5830—F. Ortiz .....	30 years	Miliary tuberculosis.
June 6	7135—Jose Morris .....	32 years	Gastric ulcer.
June 13	6407—W. H. Hamilton .....	76 years	Pulmonary tuberculosis.
June 28	7309—F. Yoshimizu† .....	32 years	Peritonitis.

Total number of deaths, 14.

\*Negro; †Japanese.

## RESIDENT DENTIST'S REPORT.

STATE PRISON AT FOLSOM, December 20, 1914.

*Hon. J. J. SMITH, Warden.*

DEAR SIR: I have the honor to hand you herewith a report, by month, of work attended to in the Dental Department, from the date of my appointment as Resident Dentist (September 25, 1913) to the end of the sixty-fifth fiscal year.

	1913			1914						
	September and Oct.	November	December	January	February	March	April	May	June	
Treatments	79	71	93	86	48	74	80	92	62	
Extractions	90	54	62	114	58	25	76	52	40	
Amalgam fillings	20	18	15	19	9	24	18	16	24	
Cement fillings	27	19	4	7	2	7	1	6	6	
Sealing	19	5	14	16	1	10	8	2	1	
Crowns					11	2	7	2	2	
Artificial dentures		3	3			3	3	3	2	
Bridges			1		4	1	1	1	2	
Gold fillings				1	1		6		1	

## Summary.

Total number treatments.....	785
Total number extractions.....	571
Total number amalgam fillings.....	163
Total number cement fillings.....	79
Total number sealings.....	76
Total number crowns.....	24
Total number plates.....	17
Total number bridges.....	10
Total number gold fillings.....	9

To further increase the efficiency of the Dental Department, I would urge that arrangements be made for its removal from the present location. Such a step would not only relieve the present congested condition of the medical quarters, but would materially aid us in properly handling the great number of dental cases awaiting treatment.

A complete equipment of dental instruments is also required.

After being established in permanent prosthetic and operating rooms, work would be provided for a number of men in the line of making artificial dentures and in attending to the prosthetic side of dentistry. Furthermore, such a course would enable the dentist in charge to give more time at the chair, operating. The prisoners, profiting by the improved conditions, would be in a position to receive prosthetic dentistry.

As compared with the great amount of good that would result, the expense incurred would be nominal.

Respectfully submitted.

JOHN S. GEORGE,  
Resident Dentist.

## CHAPLAIN'S REPORT.

---

STATE PRISON AT FOLSOM, December 27, 1914.

*To the Hon. J. J. SMITH,*

*Warden of the State Prison at Folsom.*

SIR: I beg to report as Visiting Chaplain of the State Prison at Folsom as follows:

The religious services are equally divided between the Roman Catholic Chaplain and myself—he holding services on the first and third and I on the second and fourth Sundays.

Under present conditions about one sixth of the boys attend services in the morning. In the afternoon we have a larger attendance.

Within the past two years the Chaplain has had Laymen of the Y. M. C. A. and the C. E. to address the boys on moral and religious topics.

Connected with the religious services of the prison is the V. P. L., which holds its meetings on the fifth Sunday in the month, when there is one.

The Chaplain has been successful in securing from the Bible Society bibles and testaments in both English and foreign languages, for the use of the boys. Booklets, leaflets, pamphlets, pastoral letters and religious literature in general have been sent to the prison in the Chaplain's care, to be distributed or placed in the library. In addition to these, one hundred and fifty bibles have been donated by the Christian Endeavorers, which are due to arrive early in January, 1915.

Besides preaching the Gospel and giving spiritual advice and consolation, the Chaplain has visited the sick and written scores of letters to judges, district attorneys, foreign consuls and parents, and has also secured positions for boys about to be paroled.

Unlike San Quentin, where there is a resident Chaplain who has charge of the educational department and supervision of the library, the Chaplain at Folsom Prison, not being resident, has not the oversight of either the studies or the library, and so can make no report on these departments.

I might say in passing that very few of the boys were members of any church or religious society before they came here. As might be expected there is some indifference in religious matters among the boys, due in measure to parental neglect in early training, and also to some extent to the injustices of life. Too much stress can not be placed on this last condition, which goes very far in souring men, making them pessimistic in matters social and religious.

The Chaplain works on the principle that every man has some good in him and that religion has a powerful uplifting influence, and that the Gospel which tamed and civilized our ancestors, the wild and savage tribes of Europe in ages gone by, has the same power today to change the human heart.

Both attendants at divine services and the Chaplain appreciate the repairs that have been made in the Chapel, and would be glad if steam radiators or hot water pipes might be added for the comfort of all concerned.

I can not conclude this report without expressing my gratitude to you for the many courtesies which you have extended to me from time to time, and for your earnest sympathy and cooperation in the work of the Chaplain.

I also wish to express my thanks to the State Clerk, Captain of the Guard, Turnkey, Lieutenant, Steward and other officials of the institution for the courtesies which I have received at their hands.

The painstaking and charitable work of my predecessor, the Reverend Harry Perks, deserves honorable mention.

Respectfully submitted.

JAMES T. MacGOVERN,  
Chaplain.

CAPTAIN OF THE GUARD'S REPORT.

---

*Hon. J. J. SMITH, Warden.*

STATE PRISON AT FOLSOM,  
OFFICE OF CAPTAIN OF THE GUARD.

December 29, 1914.

DEAR SIR: I herewith render my biennial report for the past two years, to wit, beginning July 1, 1912, and ending June 30, 1914:

You will find hereto attached a tabulated statement of the labor report of all departments for each and every month. All assignments to labor have been carefully made to the best interests of the prison and its discipline.

The general conduct and discipline of the prisoners is very good, there are not many infractions of the rules, and the punishment record, in consequence, is quite light.

The Guard Line is in good condition, and the deportment and the attention of the men to their duties has been very good. In this connection, I would respectfully recommend that at least three more Guards be added to the Guard Line. There are many times when the Guard Line is in a crippled condition, owing to sickness, and Guards being off on their vacations; and with three more Guards the situation in such emergencies would be much relieved.

Very respectfully,

DAN CURRAN,  
Captain of the Guard.

## LIEUTENANT'S REPORT.

---

December 20, 1914.

HON. J. J. SMITH, *Warden*.

DEAR SIR:—I have the honor to submit herewith my report for the biennial period ending June 30, 1914.

Yours respectfully,

C. F. SCHWILK,  
Lieutenant.

TABLE

Prison

	1881	1882	1883	1884	1885	1886	1887	1888	1889	1890

Annual Report

Building and Loan Associations

State of California

BUILDING AND LOAN COMMISSIONER

In accordance with an Act of the Legislature, approved April 5, 1911

His Excellency, *HIRAM W. JOHNSON*, Governor of the State of California

September 3, 1913

FREUND W. M. RICHARDSON, SUPERINTENDENT OF STATE PRINTING

SAN FRANCISCO, CALIFORNIA

1913

# REPORT

OF THE

## BUREAU OF BUILDING AND LOAN SUPERVISION.

---

OFFICE OF THE BUILDING AND LOAN COMMISSIONER,  
SAN FRANCISCO, September 3, 1913.

*To His Excellency, HIRAM W. JOHNSON, Governor of California.*

SIR: In compliance with the provisions of section 5 of the Building and Loan Commission Act, I have the honor to submit the Twentieth Annual Report of this office, upon the business and condition of the building and loan associations of California for the fiscal year ended June 30, 1913.

The schedules herein contained are the result of the tabulation of the annual reports of 93 associations, each of which reports as of the close of its own fiscal year, hence it is impossible to present the condition of the whole as of any specific date, as these reports are due and filed during each month, thus making some fully eleven months old at the close of the fiscal year of the State.

From these schedules it will be noted that the volume of assets is \$28,316,021.97, being an increase of \$3,449,500.00 over the figures for 1912—the greatest increase recorded during any one year since the creation of this department.

The schedule of "Changes in Assets and Liabilities" shows the distribution of this increase both as to the several classes of the assets and liabilities—loans being credited with \$3,127,625.95; money in office and bank with \$246,528.89 and real estate with \$80,466.65.

The schedule of "Distribution of Assets by Counties" shows the number of associations in each of 28 counties, with the assets, and increase or decrease for the county as a whole, only four counties show a decrease, in each instance mainly due to the withdrawal of maturing shares.

Thirty-eight associations hold 135 pieces of real estate, showing a net acquisition of 23 pieces during the year. This feature seems to be the only undesirable increase appearing among the assets. Some of this was unavoidable, but the property acquired is estimated to have a realization value equal to or in excess of the cost on the books.

The reserve and undivided profits, exclusive of the feature of guarantee capital, shows an increase of \$107,601.33 for the better protection of the shareholders and investors.

The shareholders and investors show an aggregate of 37,811 in number with an increase of 3,778, and an average investment of \$610.50.

The number of borrowers is reported as 18,300, a gain of 1,844, and the average loan to each is \$1,451.20.

The outstanding shares of all classes have increased 15,060, and the certificates of investment 20,850.

The number of loans reported for building purposes during the year aggregates 3,057, an increase of 467 over the report for 1912, thus raising the total of building loans reported since 1893 to 40,747, mostly for the construction of new houses.

During the year two new associations were formed—one at Madera and one at Stockton—four retired and two consolidated with others, leaving the present active roll at 94, as follows:

STATUS OF ASSOCIATIONS.		
Active roll June 30, 1912.....		98
Consolidated .....		2
Safety Mutual .....	San Francisco.	
Prudence .....	San Francisco.	
Retired .....		4
Visitation, Home .....	San Francisco.	
Sterling .....	San Francisco.	
Permanent Guarantee .....	Oakland.	
Turlock .....	Turlock.	
		6
Active and reporting.....		92
Active but not reporting (new).....		2
Security .....	Stockton.	
Madera Mutual .....	Madera.	
Total active roll June 30, 1913.....		94
In liquidation June 30, 1912.....		9
Liquidated during year.....		5
Union Mutual .....	Los Angeles.	
West Oakland .....	Oakland.	
Italian-Swiss .....	San Francisco.	
Inter-Nos. ....	San Francisco.	
San Francisco and Oakland.....	San Francisco.	
In liquidation June 30, 1913.....		4
Pacific Coast Savings.....	San Francisco.	
Protective .....	Los Angeles	
State of California.....	San Diego.	
Continental .....	San Francisco.	
Total roll June 30, 1913.....		98

The changes in the total roll, the number of associations reporting and gross assets, since 1905 are as follows:

Years	Total roll	Number reporting	Assets	Increase
1906 -----	131	106	\$19,228,938 88	-----
1907 -----	125	107	19,522,896 86	\$293,957 98
1908 -----	120	107	19,635,657 94	112,761 08
1909 -----	120	105	20,228,116 40	592,458 46
1910 -----	113	107	21,255,176 49	1,027,060 09
1911 -----	105	96	23,340,012 38	2,084,835 89

1913 -----	98	93	28,316,021 97	3,449,450 00

One association with assets of \$32,073.30 retired from business and sold all its loans to another after its report, *included herein*, had been made to this office in regular course of business, thus the real number of associations on the active roll at present, reporting for the year, are, strictly speaking, but 92, with two new associations formed during the year, the reports of which will not be due for some months yet, and in due course these should appear in the next annual report.

Early in September last developments indicated serious difficulty in connection with the operations of the then secretary of the Palo Alto Mutual Building and Loan Association of Palo Alto, and an extended audit was inaugurated. On September 20th this audit had developed a condition that warranted the Commissioner in ordering the doors of the association to be closed, as to all new business, and to make no payments other than for current expenses, except by his permission, until the audit should be finally completed and the irregularities adjusted to his satisfaction.

As a result of this audit and investigation it developed that there was a net shortage of assets of about \$122,735.00 due to a series of defalcations by the secretary, most of which had been accomplished within a period of about seven or eight months.

The association had about \$500,000.00 of perfectly good loans on which payments were being regularly made, together with other good assets, and it was felt that the shareholders would realize more by a reorganization than by a liquidation. A committee of shareholders was appointed which collated the facts and laid them before the body of the shareholders at a meeting called for that purpose. A plan of reorganization was presented and unanimously ratified, involving a net relinquishment of forty-five per cent of the book value of their shares. This plan was later personally signed by the holders of about ninety-five per cent of the book value of the shares in force, and on November 14th permission was granted the association to resume active business. At the annual meeting a few days later a new board of directors and

new officers were selected, and thus far the progress has been satisfactory to this office and to the shareholders, new business and new shareholders being gained each month. The defaulting secretary having been indicted by the grand jury, plead guilty and was sentenced to a penal term of ten years in the penitentiary at San Quentin.

IN RE THE "CONTINENTAL."

At the time of the preparation of the last report of this office the matter of the Continental was in the hands of the Federal bankruptcy court. Hearings were had before the referee in bankruptcy covering an extended period, but no one was called from this office to testify for or against the association. The referee in bankruptcy, in rendering his findings, sustained the contention of this office regarding the definite contract loans, but found that the association was not insolvent within the meaning of the United States bankruptcy laws; whereupon the whole matter then reverted to the Superior Court for hearing and trial in the manner contemplated by law. At the trial the facts found by investigation, as set forth on pages 10 and 11 of the report of 1912, were presented in detail in the testimony of the Commissioner, Secretary Fields and Expert Hassett, and in most cases were supported by the books and by vouchers. The testimony offered by this office was not directly contested, except as regards the appraisal value of the real estate and office fixtures; and except as to these no witnesses, other than Secretary Corbin and Attorney McNab testified in favor of the association. The decision of the court was filed and entered on May 2d, and is, in part, as follows. The conclusions of law signed by Judge Seawell are:

"First. That the plaintiffs are not entitled to a judgment confirming and approving the action of said George S. Walker, Building and Loan Commissioner, in assuming and taking charge of the affairs and business of such corporation, and the control of all its property, and in retaining such possession, as alleged in the complaint."

"Second. That the defendant is entitled to a judgment disapproving the action of said George S. Walker in assuming and taking charge of the affairs and business of such corporation, and the control of all its property, and in retaining such possession, as alleged in the complaint."

"Third. That the defendant is entitled to a judgment that it was not, at the time of the examination of said defendant, so made by said Commissioner, or at any other time, and that it is not conducting its business in an unsafe manner, such as to render its further proceeding hazardous to the public, and to those having funds in its custody.

Let judgment be entered accordingly."

J. M. SEAWELL,  
Judge of said Superior Court.

It was, and is yet, the claim of this office that a large deficit exists in the assets of this corporation, notwithstanding the decision of the court. One of the claims set up by us was that the borrowers had not been credited on their repayments with an amount of approximately \$52,000.00. This is a matter of mathematics not law. Referee Kreft held this to be so, although we were not a party to the bankruptcy proceedings held before him. We quote from his findings as follows:

"The difference between the book asset "Mortgage loans to members on D. C. contract and the amount due from borrowing members plus the D. C. stock principal and apportioned profits is about \$50,000.00. For the foregoing reasons I am of the opinion that the sum of \$50,000.00 must be deducted from the value of this asset, and so find."

If Referee Kreft and the Commissioner and his auditors are right, then there has been a gross miscarriage of justice, for a deficit of \$52,000.00 would make the concern decidedly unsafe.

Judge Deasy likewise passed upon this point after a prolonged trial in which Wm. Corbin was the defendant in a criminal action. We quote from his findings as follows:

"The overstating of the assets under the heading of Definite Contract Loans is such a material error or falsification in the report that the court would be bound to hold the defendant to answer in this case. The fact that, in making the report as he made it, he acted under the advice of counsel (Gavin McNab) does not help him, as he is presumed to know the law, and as an accountant and building and loan secretary of many years' standing he must have been aware of the incorrectness of the accounts which he submitted in his report relative to the definite contract loans. Upon very mature consideration I am satisfied that a public offense has been committed, to wit, a violation of section 558 of the Penal Code, and that there is reasonable and probable cause to believe the defendant, Wm. Corbin, to be guilty thereof, and it is therefore ordered that he be held to answer said charge before the Superior Court of the State of California in and for the city and county of San Francisco, and that in the meantime he be committed to the custody of the sheriff until he give bail, or be legally discharged."

The matter of the civil action is now on appeal to the Supreme Court on the ground that the decision of the Superior Court is not warranted by the facts as presented.

In this instance the court has undertaken to decide a matter of fact rather than a matter of law.

The law (section 1) charges the Commissioner with the enforcement of certain laws. Section 9 provides that "if it shall appear to the Commissioner that any such association is in an unsafe condition or is conducting its business in an unsafe manner," etc., the Commissioner

shall do certain things. In such cases the Commissioner must act on his own judgment in the enforcement of the law. The matter comes before the court and the testimony conclusively shows that the conditions claimed did actually exist, but, the court sets up its judgment in lieu of that of an administrative officer and says the law must not be enforced.

The Supreme Court of the United States has said, in a recent decision, that *it is not to set up its judgment* for that of an administrative officer in purely administrative matters. If the Supreme Court of the United States can not or will not set up its judgment in the matter of the administration of United States laws, why should a state court do otherwise regarding the administration of state laws?

In the matter of the Los Angeles Savings, Mortgage and Trust Company, referred to in detail in the report of 1911, no final action has been taken by the Superior Court of Los Angeles, but the officials of the company appear to be gradually liquidating along their own lines.

In the matter of the receiverships of the "Protective" and "Union Mutual" of Los Angeles, and the "State of California Mutual" of San Diego, the receiver of the "Union Mutual" has rendered a final report and paid a final dividend, but as to the others the real estate held has been difficult of sale at acceptable figures, hence final liquidation has been further delayed.

During the past year two foreign co-operative home building companies have attempted to do business in this State without complying with the requirements of law. The plans and methods of these are such that they come within the purview of the building and loan laws, but because of their expense fund and forfeiture features they are ineligible to license in this State. The party attempting to represent the Standard Home of Alabama ceased operations upon notification, but the National Mercantile Company, Limited, of Vancouver, B. C., is conducting more or less business through the United States mail. Theoretically and mathematically corporations of this nature are feasible, but as they possess no investment features that appeal to others than prospective borrowers, who are presumed to furnish the capital from which their loans are to be made, they are not practical as financial institutions in these times. That they are profitable to the management and agents there is little doubt. The earlier investors may obtain their loans within a reasonable time and be satisfied, but much the larger percentage will sooner or later become impatient because of the great delay, cease to make their periodical payments and eventually forfeit a part or all their investment. As between the earlier investor and the later the odds are largely in favor of the earlier, with both at the mercy of the average management, on the

basis of heads I win and tails you lose. At least that is the experience in this State, where some 38 similar organizations have been formed since early in 1902, all of which have retired from business and not one of which has been able to liquidate except at great loss to the large majority of the investors in their contracts. They are a modern adaptation of the "Bowkett" and "Starr-Bowkett" societies which flourished in England prior to 1894 when their formation was prohibited by statute. (Act of Parliament, 1894, 57 and 58 Vict., chap. 47, sec. 12.)

At the late session of the Legislature amendments to sections 633, 634, 637 and 638 of the Civil Code were passed, approved and became effective as of August 11th. The amendment to section 637 prohibits the carrying of any accounts to be withdrawn upon the presentation of any negotiable check or draft; that to section 634 quite materially changes some of the features, introduces a new form of stock or shares, and makes it obligatory that all associations shall offer installment stock or shares for sale or subscription, at all times, thereby tending to more nearly preserve the idea of mutuality. The changes in sections 637 and 638 do not of necessity affect the present system as regards loans and loaning methods, but tend to more clearly define these features, especially as regards "Definite Contract Loans," and the percentage of security that is to govern the boards of directors in making loans.

Percentage to average investment.....	7.81
---------------------------------------	------

Same percentage, report of 1912.....	7.73
--------------------------------------	------

## SALARIES, TAXES, AND OTHER EXPENSES.

	Amount	Percentage to loans in force
Paid for salaries.....	\$186,996 04	0.738
Paid for taxes.....	113,323 04	0.447
Paid for other expenses.....	201,994 69	0.797
	\$502,253 77	1.982

The percentage shown in report for 1912 was 2.206.

The actual expenses of operation being confined to the elements of salaries and other expenses, the percentage of these to the average loans in force becomes:

	Per cent
For salaries .....	0.738
For other expenses.....	0.797
	1.535
This total for 1912 was.....	1.506

If the elements of salaries and other expenses be calculated on the average investment, to show the expense of operation to the investors' capital and accumulations, the result is as follows:

	Per cent
For salaries .....	0.838
For other expenses.....	0.907
Or a total of.....	1.745
The corresponding total for 1912 was.....	1.662

#### GROSS INCOME AND PERCENTAGE OF EXPENSES TO INCOME.

The next feature for consideration is the determination of the percentage of the gross income required for expenses of operation, exclusive of taxes.

The gross income to average loans in force is made up as follows:

	Per cent
Net profits reported as above.....	6.880
Taxes paid .....	0.447
Operating expenses .....	1.535
Gross income to loans.....	8.862
Ratio of operating expenses.....	17.321
In 1912 the gross income was.....	9.226
And the ratio of operating expenses was.....	16.323

It will thus be noted that the gross income to average loans appears to be 0.364 per cent less than was shown by the report for 1912, and that the expense of operation has increased 0.998 per cent of the apparent gross income.

The segregation maintained for several years, into two classes, as "Locals" and "State Associations" has been dispensed with in this report for two reasons, viz., *first*, all are operating under the same general laws and neither class has specific distinctive features that apply solely to such classification; *second*, some of both the former classifications have, during the past few years, introduced the element of guarantee capital stock, hence if any detailed segregation is made it should be into the more distinctive classes of "Mutual" and "Guarantee Associations," but even these designations are not entirely distinctive, as several of the guarantee associations are more or less mutual, both as regards their stock issues and their manner of loaning; as some of both classes loan on the mutual plan, some on the "D. C." or definite contract plan with stock also pledged, and others on the "D. C." plan without a pledge of stock.

In order that those heretofore classified as "Locals" and "State Associations" may note the relative position of the two classes in this report, the gross figures in each class are, for comparison of the last two years, presented as follows:

## Locals:

Assets in 1912.....	\$15,733,619 66
Assets in 1913.....	17,358,070 29
Gain in 1913.....	1,624,450 63

## State associations:

Assets in 1912.....	9,132,952 31
Assets in 1913.....	10,957,951 68
Gain in 1913.....	1,824,999 37

On the other hand if the segregation is to be as "Mutuals" and "Guarantee," and these are subdivided as to the plan of loaning, the two classes will appear as follows:

## MUTUALS.

Associa- tions	Plan of loaning	Assets
58	Mutual .....	\$10,196,195 85
13	"D. C." with stock.....	6,581,074 24
5	"D. C." without stock.....	4,193,591 72
76		\$20,970,861 81

## GUARANTEE ASSOCIATIONS.

Associa- tions	Plan of loaning	Assets
4	Mutual .....	\$727,395 94
2	"D. C." with stock.....	887,238 20
11	"D. C." without stock.....	5,730,526 02
17		\$7,345,160 16

Again, if the 76 associations above classified as "Mutuals" are subdivided according to their methods of securing funds, that is by the issue of installment and full paid shares and investment certificates, the several subdivisions and their assets then are:

Associa- tions	Plan of issue	Assets
32	Installment shares only-----	\$2,996,007 79
24	Installment and full paid shares-----	6,137,691 81
11	Installment and full paid shares and investment cer- tificates-----	9,267,762 79
9	Installment shares and investment certificates-----	2,569,399 42
76		\$20,970,861 81
	The assets of these in 1912 were-----	18,752,650 64
	Showing a gain of-----	2,218,211 17

#### ASSOCIATIONS HAVING A PAID-IN GUARANTEE CAPITAL.

At the time for the report for 1912 thirteen associations were reported as having a paid-in guarantee capital; of these seven were formed under the provisions of law provided therefor and six previously formed under the mutual law had introduced this form of capital. During the past year four others have been added to this class, two having been originally formed on that plan, and two were originally mutuals that introduced this form of capital. The assets, capital and surplus, dividends apportioned thereto, and the dividend rate apportioned by them to installment shares, are as follows, excluding cents:

Associations	Location	Assets	Capital and surplus	Dividend apportioned	Dividend rate installment shares
Central -----	Alameda -----	\$146,837	\$17,886	\$1,112	6 %
Equitable -----	Berkeley -----	42,723	14,413	834	7 %
Corona Mutual -----	Corona -----	25,942	5,142	475	6 %
Altos -----	Los Altos -----	17,992	13,641	741	6 %
Bankers -----	Los Angeles -----	56,478	12,595		
State Mutual -----	Los Angeles -----	3,509,185	166,858	41,485	8 %
Southern California..	Los Angeles -----	740,401	52,342	6,500	7 %
Orange -----	Orange -----	338,064	26,000	1,000	8½ %
California Security..	Pasadena -----	393,899	32,500	2,500	6 %
Mutual -----	Pasadena -----	320,666	16,125	1,125	8 %
Home Builders -----	Pomona -----	353,881	101,473	9,382	10 %
Home Investment -----	Redlands -----	470,916	109,157	8,884	8 %
California Home -----	San Francisco..	598,641	25,000	5,402	8 %
Home Mutual -----	San Francisco..	258,811	25,000	5,000	5 %
Santa Cruz -----	Santa Cruz -----	38,973	22,661	1,537	7 %
Vallejo -----	Vallejo -----	1,943	1,818		5 %
Northern California..	Woodland -----	29,808	10,214		6 %
Aggregate of 17 associations-----		\$7,345,160	\$652,825		
The assets in 1912 were-----		6,113,921			
Gain for the year-----		\$1,231,239			

If these 17 guarantee capital associations are segregated into subdivisions as to their working capital, other than their guarantee capital it is found that

14 issue installment shares.

10 issue installment and full paid shares.

8 issue installment and full paid shares and investment certificates.

6 issue installment shares and investment certificates.

3 issue investment certificates only, and the capital thus obtained from all sources is loaned as indicated above.

The annual reports of the several associations, in condensed form, together with the book and withdrawal values, at annual periods, of the shares of serial associations; also the dues per share per month, the dividend rate for the past year, and the book and withdrawal values of shares of associations operating on the "Dayton" or permanent plan, will be found in the appendix to this report, as published, arranged alphabetically as to cities and towns.

All of which is respectfully submitted.

GEO. S. WALKER, Commissioner.

J. L. FIELDS, Secretary.

# ANNUAL REPORT

on the

# Building and Loan Associations

of the

## State of California

by the

### BUILDING AND LOAN COMMISSIONER

In accordance with an Act of the Legislature, approved April 5, 1911

to

His Excellency, HIRAM W. JOHNSON, Governor of the State of California

---

August 31, 1914

CALIFORNIA  
STATE PRINTING OFFICE  
1914

# REPORT

OF THE

## BUREAU OF BUILDING AND LOAN SUPERVISION

---

OFFICE OF THE BUILDING AND LOAN COMMISSIONER,  
SAN FRANCISCO, August 31, 1914.

*To His Excellency, HIRAM W. JOHNSON,*  
*Governor of California.*

SIR: Pursuant to the requirements of section 5 of the Building and Loan Commission Act, I have the honor to submit the Twenty-first Annual Report of this department, relating to the condition of the associations under its supervision for the fiscal year ended June 30, 1914.

The report for 1913 contained the tabulations of 93 associations. Of these two have retired as the result of consolidation with others and one has been summarily closed by the Commissioner. The first annual reports of two associations appear in this issue, thus making a total of 92 California associations with assets aggregating \$29,515,762.57, and an increase of \$1,199,740.60 for the year.

The schedule of "Changes in Assets and Liabilities" shows the distribution of this increase, both as to assets and liabilities. The only feature that can be classed as unfavorable being the increase in real estate owned; this amounts to 23 pieces in number and \$270,113.08 in book value.

It is unfortunate that associations are compelled to acquire the security pledged for loans, in an endeavor to protect themselves from loss, but there really appears to be no other alternative. Apparently the property acquired has a realization value equal to or in excess of cost, but, should it not have, it is a satisfaction to know that the reserve funds are ample to protect the shareholders.

The reserve and undivided profits of the 92 associations appears to aggregate \$1,194,235.26, a gain during the year of \$163,037.75, to which can be added the guarantee capital and surplus of the 18 associations having such capital, amounting to \$728,497.62.

The increase in assets, as above noted, appears to be divided among those heretofore classed as "Locals" and "State" associations as follows: To the locals, \$662,273.26; to the state associations, \$537,467.34.

The number of members and investors show an increase of 1,674, and now aggregate 39,485, with average investment, dues and accumulated earnings of \$673.36 each.

The number of borrowers is reported as 19,094, an increase of 794, thus making the average loan to each borrower \$1,439.43.

The outstanding shares of all classes show a decrease of 1,050, while the outstanding certificates show an increase of 7,498.

The number of loans made for building purposes were reported as 2,059, a decrease of 998 as compared with 1913, thus making an aggregate of such loans, reported since 1893, of 42,806.

#### STATUS OF ASSOCIATIONS.

Active roll June 30, 1913-----	94
Consolidated—	
Provident Mutual, Los Angeles, with the Fidelity, Los Angeles-----	1
Closed by Commissioner—	
Orange County Mutual, Santa Ana-----	1

Totals	92	92	\$29,515,762 57	\$1,303,742 14	\$104,001 54

## STATISTICAL INFORMATION.

Number of members:	
Male	18,494
Female	10,501
Total	28,995
Number of investors:	
Male	7,279
Female	3,211
Total	10,490
Number of borrowers	19,094
Number of mortgage loans for year	4,316
Number of stock loans for year	960
Number of building loans for year	2,059
Total number of building loans to date	42,806
Shares in force last report	354,667
Shares issued since last report	63,850
Shares cancelled since last report	64,900
Shares in force this report	353,617
Investment certificates in force last report	61,898
Investment certificates issued since last report	27,822
Investment certificates cancelled since last report	20,324
Investment certificates in force this report	69,396
Number of associations owning real estate	41
Number of associations not owning real estate	51
Number of pieces of real estate owned	158
Book value of real estate owned	\$741,808.20
Reserve and undivided profits	1,194,235.26

## Net Profits.

Net profits for year	\$1,955,700.09
Percentage of net profits to average loans in force	7.309
Same percentage for 1913	6.880
Percentage to average investment	7.611
Same percentage for 1913	7.609

## NEW LOANS, LOANS REPAID, ETC.

Number of new loans for year.....	5,276
Amount of new loans for year.....	\$9,075,154.80
Percentage to all loans in force.....	29.00
Loans repaid .....	7,620,230.71
Percentage of all loans in force.....	24.35
Percentage of new loans to loans in force at close of year.....	33.01
Average amount, in force, to each borrower.....	\$1,439.40

## SALARIES, TAXES AND OTHER EXPENSES.

	Amount	Percentage to loans in force
Salaries paid .....	\$189,909 80	0.709
Taxes paid .....	85,601 13	0.319
Other expenses paid.....	184,013 28	0.689
Totals .....	\$459,524 21	1.717
The percentage for 1913 was.....		1.982

The element of taxes being a feature over which the associations have no control, the expenses of operation for which the directors are directly responsible are:

Salaries .....	0.709
Other expenses .....	0.689
Total .....	1.398
This percentage for 1913 was.....	1.535

Under the laws of some of the eastern states the operating expenses, exclusive of taxes, are limited to  $2\frac{1}{2}$  per cent of the invested dues capital. If these calculations are based upon that hypothesis the result is as follows:

	Percentage to capital.
Salaries .....	0.849
Other expenses .....	0.824
Or a total .....	1.673

A result well within that limit when taken as a whole, even though some associations may have exceeded it slightly.

## GROSS INCOME AND PERCENTAGE OF EXPENSES TO INCOME.

The gross income based on the average loans in force for the year is made up as follows:

Net profits reported above.....	7.309
Taxes paid .....	0.319
Operating expenses .....	1.398

Gross income to average loans.....	9.026
Ratio of operating expenses.....	15.488
In 1913 the gross income was 8.862, and the ratio of operating expenses was.....	17.321

From the foregoing it will be noted that the gross income to the average loans in force shows an increase of .166 per cent, and the portion of the gross income applicable operating expenses appears to have decreased 1.833 per cent as compared with the report for 1913.

## ASSOCIATIONS HAVING A PAID-IN GUARANTEE CAPITAL.

Associations	Location	Assets	Capital and surplus	Dividend appor- tioned to paid-in capital	Rate of dividend on in- vestment shares
Central .....	Alameda .....	\$145,384	\$19,593	\$1,261	6 %
Equitable .....	Berkley .....	43,768	15,631	924	7 %
Corona Mutual .....	Corona .....	24,577	5,163	651	7 1/2 %
Altos .....	Los Angeles .....	20,225	15,535	1,031	7 1/2 %
Parkers .....	Los Angeles .....	9,732	13,171		
State Mutual .....	Los Angeles .....	2,781,889	191,809	50,093	9 %
Southern California .....	Los Angeles .....	79,157	51,969	6,500	7 1/2 %

## FOREIGN ASSOCIATIONS.

The first and only building and loan association formed under the laws of any other state or territory to qualify in the manner required by law and enter this State for the transaction of building and loan business is the Western Loan and Building Company of Salt Lake City, Utah.

Its first license was issued August 26, 1913, it having in the meantime complied with all requirements of law, including the deposit of securities of the amount and kind required by section 646 of the Civil Code to be deposited with the State Treasurer for the protection of citizens of this State who invest in its securities.

A condensed copy of its report as of December 31, 1913, appears on the last page of the Appendix, but being mostly business in other states, the figures are not included in the tabulations and conclusions presented herein. Future reports will segregate the California business and that portion can then be included in the tabulations.

Several associations from other states have sought information as to the requirements for entering this State for the transaction of business, but thus far all such have failed to qualify.

As the result of an investigation into the affairs of the Orange County Mutual Building and Loan Association of Santa Ana, on November 19th last, it was found that the secretary, N. A. Ulm, was a defaulter in a large amount mostly through the issue of fraudulent certificates of full paid stock to which the signature of the president

had been forged, and by the forgery of president's signature to notes and checks. The amount involved was finally determined to be about \$56,500. Immediately upon the discovery of the condition the Commissioner closed the association and took possession of its books and securities, and after a consultation with the directors appointed F. W. Mansur as custodian and placed him in charge. The action of the Commissioner was confirmed by the proper court and on December 1st Mr. Mansur was appointed special deputy, since which time the liquidation has been progressing as speedily as circumstances would permit, being materially complicated by reason of the death of Mr. Tim by suicide and the destruction of records and papers of more or less value for adjustment purposes.

In the matter of the "Continental," there has been no change since the making of the last report. The appeal, if finally completed, has not been heard and this office has no intimation as to how soon it will be heard. In the mean time the Continental people are apparently conducting the business of liquidating along their own lines, irrespective of whether it is in accordance with law or otherwise. That they are permitting withdrawals of shares of all classes there is little if any question, also that they are paying the regular dividends to the full paid shareholders while the installment shareholders have been deprived of all such benefits or credits since January 1, 1911, there is little if any question. As the matter now stands this office is powerless to act.

In the matter of the receiverships of the "Protective" of Los Angeles and "State of California Mutual" of San Diego, the unconnected assets are mainly in real estate which it has been deemed inadvisable to force upon the market under conditions that have existed during the past year.

#### CONTRACT COMPANIES.

This class of corporations, sometimes called co-operative home building companies, are patterned very closely after the original "National Building and Loan Associations," with all their most objectionable features supplemented by others skillfully devised to hoodwink the public for the special benefit of the promoters, by the use of contracts having upward of twenty conditions, in lieu of shares of stock governed by by-laws.

These contracts purport to be cumulative and to have a book value, a loan value, a withdrawal value and a matured value, all of which are features of a building and loan association. Their entrance fee is invariably in excess of that allowed by the law of this State, and they have an expense fund equal to or exceeding twenty per cent of the

periodical payments on the contracts to be deducted therefrom in direct violation of law, besides which they have a forfeiture feature, also in violation of law. Under the terms of these contracts the money accumulated from the periodical payments thereon is to be loaned to contract holders only—another building and loan feature.

In effect this class of corporations, one and all, have features sufficiently similar to those of building and loan associations to make them subject to the existing laws of this State, still because of the features that violate the law they can not be licensed in this State.

They do not depend upon the legitimate earnings of their current business to meet their expenses, but they assess this burden on the investor in their contracts and make him the "goat" under any and every condition; and if the investor gets tired of waiting until "the loan is ready" and lapses in his payments, they forfeit the contract and coolly appropriate the payments made.

Their big drawing card is "Cheap money to loan"—usually at three or five per cent per annum, but everybody knows or should know that there is no money to loan in small amounts on real estate security at either of those rates. Occasionally some one may be lucky and get a small loan, but usually the borrower has to pay a premium for the privilege of getting a loan, and the amount of that premium will determine if he pays 4, 5, 9 or 10 per cent per annum for the net amount of money he actually gets.

Taken as a whole these corporations are among the most plausible, but unscrupulous frauds and fakes ever foisted upon the public; their promises are many and flattering; but they never yet rose to the dignity of dealing in fairness with the public. The laws should be amended so as to effectually reach them and prevent their operation either direct or through the United States mail.

#### AUDITING.

Practically every association has what is known as an auditing committee,—usually composed of three of the directors,—which is supposed to annually, at least, make an examination of the books and accounts of the secretary. In many of the associations this committee employs an accountant or auditor to perform this work; an expense that is amply justified under every circumstance, provided the accountant is given unlimited authority, and the committee and the directors are willing or intend to give heed to his criticisms and recommendations. No work of this nature can be considered complete and of real value unless the pass-books of the members and investors have been collected and verified or a statement furnished to each, and to each borrower as well, and the correctness verified by the signature of the member, investor or borrower and returned directly to the auditor. Several of

the associations have adopted this latter feature, and the reports of their auditors have been placed at our disposal when making the annual examinations. If the directors or the committee fail to employ an auditor they should do the work themselves and make sure that it is thorough, for if done in a slipshod manner it is worse than useless.

The directors of practically every association realize the value of an efficient audit, still there are cases where it is neglected or performed in a perfunctory manner. To remedy this condition wherever there are indications of neglect that warrant such action, the commissioner should be empowered to order that a complete audit be made at the expense of the association, by an auditor to be selected by him, who should report both to him and to the association. The fact that the commissioner was vested with this power would cause directors to exercise more care regarding the matter of efficient audits thereby adding to the efficiency and promoting the safety and popularity of their associations.

In several of the eastern states their laws require that all officers who have charge or possession of money or securities shall give a bond for the faithful discharge of their duties before entering upon the performance thereof; said bond to be renewed at each re-election. In some cases there is a further wise provision of requiring the directors to be sworn and subscribe to an oath of office, said oaths together with the bonds of the executive officers to be filed with the commissioner at the time of filing the annual report, and it would be a wise departure from previous practices if similar laws were added to the present code of this State.

In the appendix that follows, in the printed text, will be found the annual reports of the several associations, in condensed form, together with book and withdrawal values, at annual periods, of serial associations; and the dues per share per month, the dividend rate and book and withdrawal values of "Dayton" plan associations arranged alphabetically by cities and towns.

All of which is respectfully submitted.

GEO. S. WALKER, *Commissioner*.

J. L. FIELDS, *Secretary*.

*To his Excellency, HIRAM W. JOHNSON,  
Governor of California.*

SIR: The Board of Dental Examiners of California has the honor of submitting the following as the twenty-eighth annual report of its proceedings, together with an account of all moneys received and disbursed in compliance with the requirements of that certain act of the legislature approved March 23, 1901, and amended and approved March 23, 1903, and March 20, 1905, and March 2, 1907, and April 6, 1909, entitled "An act to insure the better education of practitioners of dental surgery, and to regulate the practice of dentistry in the State of California, providing penalties for the violation thereof, and to repeal an act now in force relating to the same and known as 'An act to insure the better education of practitioners of dental surgery, and to regulate the practice of dentistry in the State of California,' approved March 12, 1885."

The Board has held four (4) meetings since December 1, 1911: one in Los Angeles and three in San Francisco. At three of these meetings, applicants for a license to practice dentistry were examined. The last meeting was a special meeting held on August 29, 1912.

The first examination was held in San Francisco beginning on December 4, 1911. At this meeting, forty-three (43) applicants were examined and thirty-six (36) were granted licenses to practice dentistry. Following are the names:

Abbott, E. A.	Fowler, R. C.	Mitchell, M. S.
Anderson, A. B.	Funk, R. R. C.	Mitchell, F. W.
Avary, H.	Fujita, S.	Page, W. E.
Bowers, F. U.	Hood, R. J.	Phillips, P. H.
Boyce, F. D.	Horner, H. I.	Robinson, R. R.
Broad, C. J.	Johnson, A. W.	Rockfellow, J. A.
Carter, C. J.	Jones, J. W.	Reiss, M.
Cosgrove, J. I.	Jordan, L. W.	Schildwachter, H. B.
Decker, C. M.	Kinsella, W. M.	Scovel, J. W.
Dietrick, A. C.	Klepinger, W. P.	Tiffany, R. D.
Fitzgerrell, G. W.	McCready, C. R.	Taylor, H. S.
Fleming, T.	McAlpin, J. D.	White, L. A.

At this meeting, officers for the ensuing year were elected as follows: President, Dr. J. M. Blodgett; Secretary, Dr. C. A. Herriek; Treasurer, Dr. J. L. Pease.

The second examination was held in San Francisco beginning on June 7, 1912. Fifty-four (54) applicants were examined at this time and the following forty (40) were successful.

Aono, F.	Johnston, E. M.	Nor, A. C.
Baker, G. F.	Kearns, T. H.	Reid, W. C.
Bernstein, A. E.	Kelley, F. E.	Reed, L. A.
Burton, F. P.	Knights, W. B.	Samuels, H. J.
Caldwell, H. H.	Kruschke, L. H.	Sarll, F. E.
Daingerfield, C. L.	Lawrenz, W. F.	Schraft, A. C.
Doran, R. E.	Layne, L. W.	Smith, J. H.
Duffee, R. T.	Levy, S.	Steffan, J. F.
Dunn, A. G.	Leiser, A. H.	Squier, L. H.
Fogg, W. S.	Lush, F. A.	Van Orden, L.
Hart, F. E.	Meagher, C. E.	Webber, C. H.
Harris, H. L.	Messner, K. W.	Wilson, F. W.
Hooper, R. V.	Murray, B. C.	Wrigley, G. E.
	McGlashan, E. L.	

An examination in Los Angeles followed the one in San Francisco beginning on June 22, 1912, at which there were seventy (70) applicants of whom forty-eight (48) were successful as follows:

Alter, C. H.	Eberts, C. L.	Reid, E. C.
Baumgardner, E. W.	Esgate, T. D.	Reynolds, H. F.
Beauchamp, C.	Fitzgerald, V. A.	Rush, T. J.
Boyens, E. W.	Fridt, P. D.	Silverberg, H. M.
Bobbitt, J. M.	Hankins, E. E.	Straub, H. E.
Boone, T. E.	Hunt, F. M.	Sutton, C. L.
Brown, W. A.	Johnson, S. H.	Taylor, F. M.
Bryan, L. A.	Kelly, E. H.	Todd, G. C.
Cannon, E. E.	Kirkpatrick, H. D.	Vahue, E. O.
Clinite, F. E.	Liggitt, R. C.	Volk, M. H.
Cram, F. H.	McStay, E. E.	Walker, C. B.
Coldwell, R. T.	Miller, J. M.	Webb, C. A.
Crew, L. C.	Nokes, I. D.	Wilson, W. E.
Crawford, H. B.	Payette, A. A.	Wilson, J. M.
Davies, O. W.	Peden, T. R.	Williams, F. A.
Day, F. W.	Reid, W. T.	Wiggins, C. G.

The executive committee of the Board has held seven (7) meetings for the transaction of such business as comes within its province.

The Board has issued four (4) duplicate licenses, and restored the licenses of three persons who had failed to register the same according to the provisions of section 10 of the dental law.

The Board has also reinstated the licenses of forty (40) who had forfeited the same by failure to pay the annual renewal license fee, as provided in section 14 of the dental law.

The Board has had the misfortune to lose an honored and efficient member, Dr. H. R. Harbison, who passed away at his home in San Diego.

The following is a report of the prosecutions that have been conducted in different parts of the State since December 1, 1911:

#### Alameda County.

The case of James R. Morton is still pending in the Superior Court of San Francisco.

M. Utsumi was arrested and fined \$100 in the Police Court of the city of Oakland on March 13, 1912.

**Mendocino County.**

A. C. Hicks, complaint was filed on January 22, 1912. He pleaded guilty in the Superior Court and was fined \$100.

**Los Angeles County.**

G. C. Todd was arrested on May 22, 1912, and had preliminary trial in the Police Court. Upon motion of the district attorney the case was dismissed.

R. E. Hewes of Los Angeles has been arrested for practicing dentistry without complying with the provisions of section 14 of the dental law. The case is pending.

**San Francisco County.**

*People vs. Lorwill Doak.* On December 1, 1911, this case was pending in the Police Court of the city and county of San Francisco upon a complaint which had been filed May 25, 1911. The case had been continued from time to time because of the fact that defendant had absconded. A bench warrant had been issued for the apprehension of the defendant. On December 23, 1911, the said case was dismissed because of the inability of the police department to locate the said defendant.

In the matter of the accusation against Cecil C. Dennis. The defendant had been arrested upon a complaint sworn to against Dr. Chalmers. On October 2d, the police magistrate having ascertained that Dr. Chalmers was in fact Cecil C. Dennis, a licensed practitioner, the said complaint was dismissed. On November 6, 1911, Carrie E. Doolittle filed a written accusation against Cecil C. Dennis charging him with unprofessional conduct. After the necessary steps were taken to confer jurisdiction, the Board proceeded to hear the said accusation on December 15, 1911, and rendered its judgment finding the defendant guilty of said charge and imposed a sentence suspending the license of the said Cecil C. Dennis for six months commencing January 1, 1912.

*Cecil C. Dennis vs. Board of Dental Examiners of California.* On January 10, 1912, Cecil C. Dennis filed a petition for a writ of review of the proceedings before the Board. After filing the return and answer, the matter was argued before Hon. F. J. Murasky, judge of the Superior Court, and was submitted to him on written briefs. On July 10, 1912, a judgment was rendered in this matter dismissing the petition of Dr. Chalmers and sustaining the judgment of the Board in suspending his license.

*People vs. Charles M. Griffith.* On December 1, 1911, this case was pending in Department 12 of the Superior Court, the defendant having pleaded not guilty to the information which had been filed October 26, 1911. On December 14, 1911, his case was tried before a jury and a verdict of guilty rendered therein. On December 18th defendant was sentenced to pay a fine of \$100.

*People vs. Arthur H. Wanz.* Complaint sworn to before police magistrate March 26, 1912. Defendant held to answer for trial before Superior Court April 9, 1912. Information filed April 19, 1912, and assigned to Department 11. April 29th defendant pleaded guilty and on May 2d was sentenced to pay a fine of \$100.

*People vs. Archie Steinau.* Complaint was sworn to March 26, 1912. Defendant held to answer for trial before Superior Court April 10, 1912. Information filed April 19, 1912. On May 3, 1912, defendant pleaded guilty and made a motion for probation. On May 13th this motion was denied and defendant was sentenced to pay a fine of \$150.

*People vs. Olivet Walsh.* Complaint sworn to March 26, 1912. Defendant held to answer for trial before Superior Court April 9, 1912. Information filed April 19, 1912. On May 3, 1912, defendant pleaded guilty and made a motion for probation. This motion was continued from time to time until August 29th at which time the same was granted by Judge Lawlor.

**Siskiyou County.**

Evidence was gathered against C. E. Waiste, who was practicing at Montague, but before the arrest could be made, he crossed the line into Oregon.

## TWENTY-NINTH ANNUAL REPORT

OF THE

# BOARD OF DENTAL EXAMINERS OF CALIFORNIA.

To his Excellency, HIRAM W. JOHNSON,

*Governor of the State of California.*

SIR: The Board of Dental Examiners submits the following as the twenty-ninth annual report of its proceedings, together with an account of all moneys received and disbursed in compliance with the provisions of that act of the legislature approved March 23, 1901, and amended and approved March 20, 1903, March 23, 1905, March 2, 1907, April 6, 1909, and June 11, 1913, entitled "An act to insure the better education of practitioners of dental surgery, and to regulate the practice of dentistry in the State of California, providing penalties for the violation thereof, and to repeal an act now in force relating to the same and known as 'An act to insure the better education of practitioners of dental surgery and to regulate the practice of dentistry in the State of California,' approved March 12, 1885."

During the year, the Board has held three (3) regular meetings for the purpose of examining applicants for a license to practice dentistry and for the transaction of other necessary business, and also one special meeting.

At the first examination which was held in San Francisco from December 4th to December 17, 1912, sixty applicants were examined for a license to practice dentistry. The following forty-four (44) were successful.

Brown, G. M.	Huston, C. G.	Randall, O. F.
Campbell, E. O.	King, R.	Richardson, L. E.
Chandler, F. W.	LaBelle, F. J.	Rietz, H. C.
Clarke, A. G.	Lang, E. A.	Russell, C. D.
Cohen, D. L.	Langer, G. R.	Schmohl, L. W.
Cureton, W.	Logan, J. B.	Smith, T. N. M.
Day, C. A.	Lutz, J. A. G.	Sparks, P. A.
Dorland, J. W.	Marsten, A. I.	Stark, W.
Dowd, J. W.	Medcraft, H. C.	Stevenson, J. E.
Fagg, D. M.	Moody, G. R.	Stockman, D. D.
Fleming, Jas.	Parker, C. H.	Thatcher, H. M.
Fukasawa, J.	Patterson, C. S.	Tremain, I. R.
Galan, J. R.	Pletcher, D. I.	Westerfeld, F.
Hawver, H. D.	Puckett, C. W.	White, J. F.
Hogue, R. V.		Wyman, Mattie K.

At this meeting, the following officers were elected for the ensuing year: President, Dr. C. A. Litton; Secretary, Dr. C. A. Herrick; Treasurer, Dr. Joseph Loran Pease.

The second examination was held in San Francisco from June 7th to June 20th, at which time seventy-five (75) applicants were examined and the following sixty-one (61) were successful:

Adair, H. C.	Goodnight, C. H.	Sandel, H.
Albright, A. N.	Gromaire, C. A.	Sato, H.
Arentz, G. B.	Hanford, H.	Schneider, E. F.
Barber, F. S.	Hinckley, E. J.	Shirley, R. E.
Barnhart, H. C.	Howell, R. B.	Shane, J. H.
Beckett, J. A. P.	Hughes, J. L.	Simonton, F. V. A.
Beeson, E. I.	Irons, R. H.	Silva, S. J.
Bliss, V. W.	Keating, Nora M.	Snell, E. W.
Brown, A. M.	Kennedy, G. D.	Tuckey, H. A.
Brown, H. M.	Kingsbury, B. C.	Tuttle, O. S.
Bretz, A. H.	Kirtland, H. B.	Varner, E. C.
Bruhns, H. J.	Lehritter, J. E.	Veatch, H. C., Jr.
Burlingame, F. W.	Morey, G. A.	Vogt, R. H.
Calderwood, W. M. S.	Musante, C. B.	Walker, T. R.
Craig, T.	Nasser, R. J.	White, J. J.
Derham, F. E.	Norman, C. O.	White, S. A.
Faught, G. W.	Owen, C. M.	Wildanger, A. J.
George, J. S.	Perkins, M. L.	Wilson, L. S.
Giddings, C. G.	Rice, F. B.	Wright, W. C.
Glasier, A. B.	Rowe, C. M.	Yamamoto, T.
	Rowe, F. M.	

This examination was followed immediately by one in Los Angeles. Sixty-nine applicants took this examination and fifty-three (53) were granted licenses as follows:

Agee, C. L.	Hawkins, E. C.	Powers, G. G.
Anderson, H.	Hawkins, C. G.	Rosenquist, A. C.
Ballard, F. A.	Holcombe, J. V.	Ross, F. A.
Bailey, M. F.	Jacobs, J. E.	Senseney, H. E.
Bedford, W. E.	James, C. W.	Seymour, J. C.
Belfils, J. A.	Kesling, E. C.	Seymour, J. H.
Bokay, C. E.	Lucas, P. O.	Siewert, A. D.
Boswell, J. H.	Lynch, J. F.	Sinton, W. E.
Butler, A. J.	McCarty, W. W.	Swift, H. M.
Campbell, F. C.	McKay, P. H., Jr.	Symmes, C. W.
Carroll, C. E.	Nall, H. B.	Tanaka, F. F.
Coffin, D. S.	Nicholson, U. H.	Thomas, H. G.
Doolittle, F.	Noxon, H. L.	Thompson, S. H.
French, R. C.	Osborne, A. H.	Walter, H. E.
Fritz, G. E.	Osterheld, D., Jr.	Wells, R. B.
Hale, N.	Peisch, H. C.	Winning, W. P.
Hanna, G. R.	Pool, C. H.	Withee, U. V.
Haseltine, L. F.		Witty, J. W.

During the year, the Executive Committee of the Board has held six (6) meetings for the purpose of transacting certain business delegated to it.

The Board has restored two licenses which had been forfeited by failure to register with the county clerk as provided in section 10 of the dental law. It has also issued two duplicate licenses, and has reinstated twenty-four licenses which were revoked by operation of the law for failure to pay the annual license fee.

Following is a report of the prosecutions that have been conducted throughout the State during the year:

#### Alameda County.

The case of James R. Morton is still pending in the Superior Court of San Francisco. New evidence was recently gathered against him and

he was arrested. The preliminary hearing was held before Judge Quinn and the defendant was held over to answer before the Superior Court.

John Doe O'Connell was arrested in the city of Oakland during the month of October and his case is set for hearing in the Police Court on December 3, 1913.

R. B. Newbre of Berkeley was arrested during the month of October and the case is set for preliminary hearing on December 19, 1913.

#### **Fresno County.**

A. G. Atamian, against whom complaint had been made that he was practicing illegally in Fresno, was notified by the district attorney to cease practice and he is now preparing to take the examination.

#### **Modoc County.**

A. B. Glasier, against whom complaint had been made that he was practicing illegally at Fort Bidwell, was notified by the district attorney to cease practice. He has since taken the examination and been licensed to practice.

#### **Los Angeles County.**

B. W. Wallace was arrested and on July 25, 1913, he was tried in Police Court No. 1 in the city of Los Angeles. He pleaded guilty, and was fined \$100 which he paid.

In March, R. E. Hewes, who had been arrested for practicing dentistry without complying with the provisions of section 14 of the dental law, was tried by a jury in the Police Court of the city of Los Angeles, and acquitted.

#### **Imperial County.**

A. E. Fuller was arrested on November 18th. He pleaded guilty and was fined \$100. Being unable to pay the fine he is at present serving sentence in jail.

#### **Orange County.**

E. G. Powers was arrested at Garden Grove on November 3d. The preliminary hearing was held on November 20th and he was held to answer before the Superior Court. The case is pending.

#### **San Diego County.**

II. H. Bold was arrested on November 17th in the city of San Diego. The preliminary hearing was held on November 18th and he was held to answer before the Superior Court. On November 19th, he pleaded guilty and was fined \$100, which he paid.

#### **San Francisco County.**

*People vs. C. M. Everton.* On February 21, 1913, complaint was sworn to before Judge Deasy and warrant issued. March 4, 1913, defendant was held to answer for trial before the Superior Court. Information was filed on March 11, 1913. On March 17, 1913, defendant pleaded guilty and a motion for probation was made.

On July 15, 1913, the said motion was denied and defendant was sentenced to pay a fine of \$150, which he did.

*People vs. Harry Keck.* On February 21, 1913, complaint was sworn to before Judge Deasy and warrant issued. On March 4, 1913, defendant was held to answer for trial before the Superior Court. On March 11, 1913, information was filed by the district attorney. On March 17, 1913, defendant pleaded guilty and was sentenced to pay a fine of \$100, which he did.

*People vs. Albert Richert.* On March 20, 1913, complaint was sworn to before Judge Deasy and warrant issued. On March 25, 1913, defendant was held to answer for trial before the Superior Court. On March 28, 1913, information was filed by the district attorney. On April 9, 1913, defendant pleaded guilty and made a motion for probation which motion was granted on May 3, 1913, and the court fixed the term of one year.

*People vs. John C. Shipper.* On March 20, 1913, complaint was filed before Judge Deasy and warrant issued. On March 25, 1913, defendant was held to answer before the Superior Court. On March 28, 1913, information was filed by the district attorney, and case was assigned to Department 12 of the Superior Court. On April 12, 1913, defendant pleaded guilty and made a motion for probation. On May 3, 1913, motion for probation was granted by the court for the term of one year.

*People vs. Olivet Walsh.* On April 2, 1913, complaint was sworn to before Judge Deasy. The purpose of filing this complaint was to bring the defendant before Department 12 of the Superior Court for violation of the order admitting her to probation, which said order had been made by Judge Lawlor on August 24, 1912. The proceedings in the Police Court were disposed of May 2, 1913, the case being placed on the reserve calendar. The defendant was produced in Department No. 11 of the Superior Court in the prior case and a motion was made on April 3, 1913, to vacate the order admitting her to probation. Proceedings were had from time to time on this motion until April 28, 1913, at which time the motion to revoke probation was submitted. Judge Lawlor ordering the probation to continue, but requiring the defendant to deposit with the court the sum of \$500 cash, as security for the faithful performance of the order of probation which deposit was made by defendant.

*In the matter of the accusation against J. P. Lassen.* On May 10, 1913, an accusation was filed with the Board accusing J. P. Lassen of unprofessional conduct in that he employed H. E. Keck, an unlicensed person, in the conduct of his business. This matter came on for hearing on June 6, 1913, and was presented to the Board in its entirety, and judgment being rendered, the license of J. P. Lassen was suspended for the term of one year, commencing July 1, 1913. Dr. Lassen filed a petition for an injunction in the Superior Court on July 1st. A temporary injunction was issued and subsequently dissolved. Thereafter a petition for a writ of review was filed, and the case is still pending.

*In the matter of the accusation against J. J. Schultz.* An accusation was filed against J. J. Schultz on May 10, 1913, charging him with unprofessional conduct in that he aided and abetted Albert Richert to practice dentistry unlawfully. This matter came on for hearing

June 5, 1913, and was presented in its entirety to the Board, judgment being rendered discharging and exonerating said J. J. Schultz.

*In the matter of the accusation against W. O. Ogle.* An accusation was filed against W. O. Ogle on May 10, 1913, charging him with unprofessional conduct in that he aided and abetted Albert Richert to practice dentistry unlawfully. This matter came on for hearing June 5, 1913, and was presented in its entirety to the Board, judgment being rendered discharging and exonerating said W. O. Ogle.

*Charles E. Hill vs. Board of Dental Examiners.* Charles E. Hill filed a petition with the Superior Court of the county of Los Angeles against the Board of Dental Examiners seeking to have the action of the Board refusing him a license upon his failure to pass a satisfactory examination reviewed by the court and annulled. To this petition, a demurrer was interposed by the Attorney General appearing on behalf of the Board and was sustained. Several amended petitions were filed by Charles E. Hill seeking the same relief but in each instance the demurrer interposed by the Attorney General was sustained, the last one being sustained by the court without leave to the petitioner to again amend his petition. This finally disposed of the matter in that court. No further action has as yet been taken by Charles E. Hill.

During the last session of the legislature section 14 of the dental law was amended so that all funds of the Board of Dental Examiners be deposited with the state treasury. This amendment went into effect on the tenth day of August, 1913.

The following is an account of all moneys received and disbursed during the year.

## FINANCIAL STATEMENT.

December 1, 1913, balance on hand----- \$5,798 86

All of which is respectfully submitted by the Board of Dental Examiners of California.

December 1, 1913.

C. A. LITTON, D.D.S.,  
President.

C. A. HERRICK, D.D.S.,  
Secretary.

## GENERAL INFORMATION.

Those asking for information should send a stamp for reply.

All money paid to the Board should be sent to the Secretary.

Any one failing to receive an official, numbered receipt for money paid will confer a favor by communicating such fact to the Secretary.

The law does not exempt a non-resident or retired dentist from the payment of the annual renewal fee; however, if he does not wish to keep his license valid in California he may omit paying the fee.

Diplomas from dental colleges or licenses from other States give their holders no right to practice dentistry in California without first passing an examination.

California does not interchange licenses with other States.

Each applicant must come prepared to perform any operation in prosthetic or operative dentistry that may be assigned to him. All work must be done in the presence of the Board. Applicants must furnish all necessary instruments, materials, and patients. A complete set of rules and instructions governing the examinations will be given the applicants at the time of the examinations.

Under our present law it is very necessary that the Board should have the correct addresses of all dentists licensed to practice in California, whether they reside in the State or not. The migratory habits of many dentists have made the task of securing change of address a very difficult one. We appeal to every member of our profession to assist the Board in this work.

Since December 1, 1913, the Board has held an examination and the following forty-two applicants were granted licenses:

Allen, H. J.	Hess, O. G.	Millham, T. L.
Andrews, E. R.	Jackson, H. N.	Mohney, B. T.
Atamian, A. G.	Johnson, A. E.	Norris, R. W.
Bell, R.	Kennedy, A. I.	Penwarden, R. S.
Bold, H. H.	Keck, H. E.	Reed, J. T.
Bollermann, C. E.	Leonard, J. W.	Scheick, A. G.
Carey, H. M.	Lieberthal, C. P.	Schuessler, A. J.
Coyne, W. E. S.	Lukens, C. W.	Shannon, H. R.
DeCou, C. L.	Lutz, I. D.	Smith, R. F.
Dodge, W. H.	Mason, J. A.	Sparrow, W. J.
Downs, L. W.	Manning, P. R.	Sweet, H. A.
Fontaine, Mae L.	Marr, G. D.	Tegarden, J. W.
Gillam, C. E.	Matsuno, M. A.	Whinnery, J. K.
Gum, E. S.	McCord, W. B.	White, A.

## DENTAL LAW OF CALIFORNIA.

*An act to insure the better education of practitioners of dental surgery, and to regulate the practice of dentistry in the State of California, providing penalties for the violation hereof, and to repeal an act now in force relating to the same and known as "An act to insure the better education of practitioners of dental surgery, and to regulate the practice of dentistry in the State of California," approved March 12, 1885.*

[Approved March 23, 1901; amended and approved March 20, 1903, and March 20, 1905, and March 2, 1907, and April 6, 1909, and June 11, 1913.]

*The people of the State of California, represented in senate and assembly, do enact as follows:*

SECTION 1. It shall be unlawful for any person to engage in the practice of dentistry in the State of California, unless said person shall have obtained a license from a board of dental examiners, duly authorized and appointed under the provisions of this act to issue licenses; *provided*, that this act shall not affect the right under the laws of the State of California, of dentists to practice dentistry who have lawful right to practice dentistry at the time of the passage of this act, and no dentist shall be exempt from paying an annual license tax, as hereinafter provided. [*Amendment of 1909.*]

SEC. 2. A board of dental examiners to consist of seven (7) reputable and ethical practicing dentists is hereby created, to be known as the board of dental examiners of California, whose duty it shall be to carry out the purposes and enforce the provisions of this act. The members of this board shall be appointed by the governor of California, all of whom shall have been actively and legally engaged in the practice of dentistry in the State of California, for at least five (5) years next preceding the date of their appointment, and none of whom shall be members of the faculty of any dental college or dental department of any medical college in the State of California, or shall have any financial interest in any such college. The said seven (7) shall compose the board of dental examiners of California. The term for which the members of said board shall hold office shall be four (4) years, except that two of the members of the board first to be appointed under this act shall hold their term of office for the term of one year, two for the term of two years, two for the term of three years, and one for the term of four years, and until their successors are duly appointed and qualified. In case a vacancy occurs in the membership of said board, such vacancy shall be filled by appointment by the governor, within thirty (30) days after such vacancy occurs.

SEC. 3. It shall be the power and duty of said board to elect from its membership the following officers: president, treasurer and secretary. The secretary shall receive such compensation as may be fixed by the board, which shall be in addition to his per diem and mileage as a member of the board. They shall meet regularly at least twice each year, at such time and place as the board may designate, for the purpose of transacting its business, and special meetings may be held at such other times as the board may elect, or on the call of the president of

the board, or of not less than four (4) members thereof. A written notice of the time, place and object of such special meeting shall be mailed by said secretary to all the members not parties to the call, at least fifteen (15) days before the day of meeting. The said board shall examine all applicants for licenses to practice dentistry according to the provisions of this act; collect and apply all fees as directed by this act; keep a book showing the names of all persons to whom licenses have been granted by said board to practice dentistry, and such other books as may be necessary to plainly show all the acts and proceedings of said board; have and to use a seal bearing the name "Board of Dental Examiners of California." [*Amendment of 1909.*]

SEC. 4. Out of the funds coming into the possession of the board, each member of said board may receive as compensation ten dollars (\$10.00) for each day actually spent in attending to the duties of his office, and mileage at the rate of five cents (\$.05) per mile for all distances actually traveled in going to and coming from the meetings of the board. Said expenses shall be paid from the fees and fines received by the board under the provisions of this act, and no part of the salary or other expenses of the board shall ever be paid out of the state treasury.

SEC. 5. Each member of the board shall, upon his qualification and the organization of the board, file with the secretary his post-office address, and thereafter any notice of any change therein. Any notice sent to the address so on file, shall be deemed to comply with the requirements of this act as to notice to them.

SEC. 6. All books of said board shall be of public record and at all times during business hours open to public inspection. A certified copy of any part or all thereof shall be primary evidence in any court of this state. The original books shall be kept in the office of the secretary of said board, wherever he may reside, and he shall furnish to any person making application therefor a copy of any part thereof, upon the applicant paying a fee of twenty-five cents (\$.25) per hundred words so copied, the said fee to belong to the secretary. All copies shall be certified by the secretary.

SEC. 7. The governor shall have the power to remove from office at any time, any member of the board for continued neglect of duty required by this act, or for incompetency, unprofessional or dishonorable conduct.

SEC. 8. Said board shall examine all applicants for examination, who shall furnish satisfactory evidence of having complied with the provisions of this act relating to qualification for examination, together with the payment of the fee provided for in section twelve of this act. The examination of applicants shall be sufficiently thorough to test the fitness of the candidate to practice dentistry. It shall include, written in the English language, questions on the following subjects: anatomy, physiology, chemistry, materia medica, therapeutics, metallurgy, histology, pathology, operative and prosthetic dentistry, oral surgery and orthodontia; the answers to which shall be written in the English language. Said written examination may be supplemented by an oral examination. Demonstrations of the applicant's skill in operative and prosthetic dentistry must also be given. All persons successfully passing such examinations shall be registered as licensed dentists on the

board register, as provided in section three, and shall be granted by the board a license to practice dentistry in the State of California, which license is subject to renewal, as hereinafter provided. In no case shall any applicant be examined or given a license who is not twenty-one years of age. [*Amendment of 1909.*]

SEC. 9. Any member of the board may inquire of any applicant for examination concerning his character, qualifications or experience, and may take testimony of any one in regard thereto, under oath, which he is hereby empowered to administer.

SEC. 10. Every person now licensed to practice dentistry in this state, who has failed to register his license with the clerk of the county wherein his place of business is located, as provided by law, must register the same within sixty days after this law takes effect, and every person who shall hereafter be licensed to practice dentistry in this state, shall within six months thereafter register in the office of the clerk where his place of business is located, in a book kept by the clerk for such purpose, and called a register of dentists, his name, age, office address, the date and number of his license to practice dentistry, and the date of such registration, which registration he shall be entitled to make only upon showing to the county clerk his license or a copy thereof certified by the secretary of the board over its seal, and making an affidavit stating his name, age, birth place, the number of his license and the date of its issue; that he is the identical person named in the license; that before receiving the same he complied with all the preliminary requirements of this statute and the rules of the board of dental examiners as to the terms and the amount of study and examination; that no money other than the fees prescribed by this statute and said rules, was paid directly or indirectly for such license, and that no fraud, misrepresentation or mistake in a material regard was practiced, employed or occurred by any person in order that such license should be conferred. Said person need not personally register before the county clerk but may make the affidavit afore provided before any officer authorized by law to administer oaths, and which affidavit together with the other information and license, or the certified copy thereof as afore provided, shall be forwarded to the said county clerk, who shall act in the manner the same as if the party was personally present. The county clerk shall preserve such affidavit in a bound volume and shall issue to every licentiate duly registering and making such affidavit, a certificate of registration in his county, which shall include a transcript of the registration. Such transcript and license may be offered as primary evidence in all courts of the facts therein stated. A copy of such certificate of registration shall be sent by the county clerk to the secretary of the board within five (5) days after it is made. The county clerk's fees for taking such registration and affidavit and issuing such certificate of registration shall be one (\$1.00) dollar. A practicing dentist having registered a lawful authority to practice dentistry in one county of the state, and removing such practice or part thereof to another county shall show or send by registered mail to the clerk of such other county his certificate of registration. If such certificate clearly shows that the original registration was of an authority issued by the board of dental examiners, or if the certificate of registration itself is indorsed by the secretary of the board of dental examiners as entitled to registration, the clerk shall thereupon register

the applicant in the registers of dentists of the latter county on receipt of a fee of fifty (50) cents, and shall stamp or indorse on such certificate of registration the date and his name preceded by the words "registered also in ——— county," and return the certificate of registration to the applicant. Any lawfully registered person who shall thereafter change his name according to law shall register the new name with a marginal note of the former name with the clerk of the county or counties where he is practicing. The clerk shall forthwith notify the secretary of the board of such change. Any county clerk who knowingly shall make or suffer to be made upon the register of dentists kept in his office any entry other than that provided for in this act, shall be liable to a penalty of fifty (\$50.00) dollars to be recovered by and paid to the said state board of dental examiners in a suit in any court having jurisdiction. Any failure, neglect or refusal on the part of any person holding such license to register the same with the clerk of said county as above directed for a period of six months after the issuance thereof shall ipso facto work a forfeiture of his license, and it shall not be restored except upon the payment to said board of twenty-five (\$25.00) dollars. Any suspension, revocation or reinstatement of a license shall with the date thereof be forthwith noted by the county clerk on the margin of the registration thereof upon receipt of notice from the secretary of the board. [*Amendment of 1909.*]

[*Section 11, repealed March 20, 1905.*]

SEC. 12. No person shall be eligible for examination by the state board of dental examiners who shall not furnish satisfactory evidence of having graduated from a reputable dental college, which must have been indorsed by the board of dental examiners of California, or who shall not furnish to said board of examiners a certificate from the state board of dental examiners, or similar body, of some other state in the United States, showing that he or she has been a licensed practitioner of dentistry in that state for at least five (5) years; *provided*, that every person actually engaged as an apprentice to a regularly licensed dentist in the State of California at the time of the passing of this act, shall be eligible for examination, if, within thirty (30) days after the passage of this act, he shall file with the secretary of the board an affidavit stating his name, age, the length of time for which he has been actually apprenticed and with whom; and who, at the time of his application for examination, shall show to the satisfaction of the board that he has served an apprenticeship of at least four (4) years and is a graduate from a high school or similar institution of learning in this or some other state of the United States requiring a three (3) years' course of study; *and provided*, that no examination shall be given to an applicant claiming the right to take the same as an apprentice later than June, 1913. [*Amendment of 1909.*]

[*Section 13 repealed.*]

SEC. 14. Before any person can practice dentistry in this state, he shall obtain a license to do so from the board of dental examiners. Each application shall be accompanied by a fee of twenty-five (\$25.00) dollars, which shall in no case be refunded. Such license shall be good until the following first day of May when it shall expire by limitation. An annual license fee of two (\$2.00) dollars shall thereafter be paid annually by every person practicing dentistry in this state, and it shall

be the duty of said board to issue to all regularly licensed dentists upon application and the payment of \$2.00, if made before the expiration of the applicant's license, a new license which shall entitle said person to practice dentistry in this state for a period of one year, and which license shall expire upon the following first day of May. Said board shall have no authority to issue an annual license to any person who is not a regularly licensed dentist, and who has not paid such license fee of \$2.00 on or before the date when his previous license expired. Every person who was a regularly licensed dentist and who failed to pay said annual license of \$2.00 before the expiration of his license, shall be considered as if no license had ever been issued to him, and before he can again practice dentistry in this state, shall make a new application therefor as in the first instance and pay the regular fee of \$25.00 therefor, except that he shall not be required to submit to any examination. All renewal fees collected under the provisions of this section, or an amount equal to the total of such collections, shall be used exclusively for the prosecution of violators of this act and for expenses of collecting said fees. It shall be the duty of the secretary of this board to report to the state controller on or before the tenth day of each month all fees, fines, licenses and other collections received during the preceding month and at the same time to pay the entire amount of such receipts into the state treasury. Such receipts shall be placed to the credit of the state board of dental examiners contingent fund, which is hereby created. All salaries and all expenses necessarily incurred by the board in the transaction of its business and in the enforcement of the law shall be paid out of such contingent fund upon claims to be presented and audited in the manner usual with other claims against the state. [*Amendment of 1913.*]

SEC. 15. Any person shall be understood to be practicing dentistry within the meaning of this act who shall display a sign or in any way advertise himself as a dentist, or who shall, for a fee, salary or reward, paid directly or indirectly either to himself or to some other person, perform an operation of any kind upon, or treat diseases or lesions of, the human teeth or jaws, or correct malimposed positions thereof; but nothing in this act contained shall prohibit bona fide students of dentistry from operating in the clinical departments of the laboratory of a reputable dental college, or an unlicensed person from performing merely mechanical work upon inert matter in a dental laboratory or a licensed physician from practicing oral surgery or treating diseases of the mouth. [*Amendment of 1909.*]

[*Sections 16, 17, and 18 repealed in 1903.*]

SEC. 19. Any person, company or association shall be guilty of a misdemeanor, and upon conviction thereof shall be punishable by imprisonment in the county jail not less than ten (10) days nor more than one (1) year, or by a fine of not less than one hundred (\$100.00) dollars nor more than one thousand (\$1000.00) dollars, or by both such fine and imprisonment, who (1) shall sell or barter or offer to sell or barter any dental degree or any certificate or transcript, made or purporting to be made, pursuant to the laws regulating the license and registration of dentists; or (2) shall purchase or procure by barter, any such diploma, certificate or transcript, with intent that the same shall be used as evidence of the holder's qualification to practice dentistry, or in fraud

of the laws regulating such practice; or (3) shall with fraudulent intent, alter in a material regard any such diploma, certificate or transcript; or (4) shall use or attempt to use any such diploma, certificate or transcript, which has been purchased, fraudulently issued, counterfeited or materially altered, either as a license or color of license to practice dentistry, or in order to procure registration as a dentist; or (5) shall practice dentistry under a false or assumed name; or (6) shall assume the degree of "doctor of dental surgery" of "doctor of dental medicine," or shall append the letters "D.D.S." or "D.M.D." to his or her name not having duly conferred upon him or her, by diploma from a recognized dental college or school legally empowered to confer the same, the right to assume said title; or shall assume any title, or append any letters to his or her name, with the intent to represent falsely that he or she has received a dental degree or license; or (7) shall in an affidavit, required of an applicant for examination, license, or registration, under this act, wilfully make a false statement in a material regard; or (8) shall engage in the practice of dentistry under any title or name without causing to be displayed in a conspicuous manner and in a conspicuous place in her or his office the name of each and every person employed in the practice of dentistry therein, together with the word mechanic after the name of each unlicensed person employed; or (9) shall within ten days after demand made by the secretary of the board, fail to furnish to said board the name and address of all persons practicing or assisting in the practice of dentistry in the office of said person, company or association, at any time within sixty (60) days prior to said notice, together with a sworn statement showing under and by what license or authority said person, company or association, and said employee are or have been practicing dentistry, but such affidavit shall not be used as evidence against such person, company or association in any proceeding under this section; or (10) is practicing dentistry in the state without a license, or whose license has been revoked or suspended. [*Amendment of 1909.*]

SEC. 20. It is hereby further provided, that the conferring of degrees and the bestowing of diplomas, by reputable dental colleges of this state, which have been indorsed by the board of dental examiners of California are not included in the penalties prescribed in section 19 of the said act of March 23, 1901, as amended by the act of March 20, 1903. [*Amendment of 1909.*]

SEC. 21. All fines, penalties, or forfeitures, including the examination fee, imposed or collected for the violation of any of the foregoing provisions of this act, unless otherwise specified, shall be paid to the secretary and be by him turned into the general fund of the said board. All fines paid or collected for the violation of any of the provisions of this act shall be paid by the court, in which the conviction shall be had, to the secretary of the said board to be by him turned into the general fund of said board. Said board, or any member or officer, thereof, may prefer a complaint for violation of this act or any part thereof, before any court of competent jurisdiction, and may by its officers, counsel and agents, assist in presenting the law or facts at the trial. It shall be the duty of the district attorney of each county in this state to prosecute all violations of the aforesaid provisions of this act in their respective counties in which such violations occur. [*Amendment of 1909.*]

SEC. 21½. Any dentist may have his license revoked or suspended by the board of dental examiners for any of the following causes:

(1) His conviction of a felony or misdemeanor involving moral turpitude, in which case the record of conviction or a certified copy thereof, certified by the clerk of the court, or by the judge in whose court the conviction is had, shall be conclusive evidence.

(2) For unprofessional conduct or for gross ignorance or inefficiency in his profession. Unprofessional conduct shall mean employing persons known as cappers, as steerers, to obtain business; the obtaining of any fee by fraud or misrepresentation; wilfully betraying professional secrets; employing directly or indirectly any student or any suspended or unlicensed dentist to perform operations of any kind, or to treat lesions of the human teeth or jaws, or correct malimposed formations thereof, except as heretofore provided in section thirteen; aiding or abetting any unlicensed person to practice dentistry unlawfully; habitual intemperance; gross immorality.

The proceedings to revoke or suspend any license under the first subdivision hereof, must be taken by the board on the receipt of a certified copy of the record of conviction. The proceedings under the second subdivision hereof may be taken upon the information of another. All accusations must be in writing, verified by some party familiar with the facts therein charged, and three copies thereof must be filed with the secretary of the board. Upon receiving the accusation the board shall, if it deem the complaint sufficient, make an order setting the same for hearing, at a specified time and place, and the secretary shall cause a copy of the order and of the accusation to be served upon the accused at least ten (10) days before the day appointed in the order for said hearing. The accused must appear at the time appointed in the order and answer the charges and make his defense to the same, unless for sufficient cause the board assign another day for that purpose. If he do not appear the board may proceed and determine the accusation in his absence. If the accused plead guilty or refuse to answer the charges, or upon the hearing thereof the board shall find them or any of them true, it may proceed to a judgment revoking his license or suspending it. The board and the accused may have the benefit of counsel, and the board shall have power to administer oaths, take the depositions of witnesses in the manner provided by law in civil cases, and to compel them to attend before it in person the same as in civil cases, by subpoena issued over the signature of the secretary and the seal of the board and in the name of the people of the State of California. Upon the revocation of any license, the fact shall be noted upon the records of the board of dental examiners and the license shall be marked as canceled, upon the date of its revocation. [*Amendment of 1909.*]

SEC. 22. The members of the board of dental examiners shall make an annual report of its proceedings to the governor of California by the first of December of each year, together with an account of all moneys received and disbursed by them, pursuant to this act.

SEC. 23. Four members of said board of dental examiners shall constitute a quorum for the transaction of business at any meeting of the board.

[*Section 24 repealed.*]

SEC. 25. This act shall take effect immediately, and all laws in conflict with this act are hereby repealed. [*Amendment of 1903.*]

JAMES C. ANDREASON, Yuba City.

C. A. PEAIRS, Tulare.

DR. H. RODGERS, El Centro.

## LETTER OF TRANSMITTAL.

SAN FRANCISCO, December 1, 1914.

*To His Excellency, HIRAM W. JOHNSON,*  
*Governor of the State of California.*

SIR: We have the honor to submit herewith, in compliance with law, the report of the State Dairy Bureau for the biennial period ending November 30, 1914.

Respectfully,

M. T. FREITAS,  
Chairman.

F. W. ANDREASEN, Secretary.

## INTRODUCTION.

---

There have been no changes in the personnel of the Dairy Bureau during the period covered by this report, except for the four additional inspectors who have been added to the force since December 1, 1912. The names of these inspectors are John P. Hynding, James C. Andreason, L. H. Pfitzer and Harris T. Nye.

The Commissioners have given their work gratis except on the four days of each year on which meetings have been held. From their different localities they have, without cost to the state, given notice of matters that needed attention and have in every way endeavored to make the work of the bureau efficient.

The chemist of this bureau, Mr. Chester F. Hoyt, has been constantly engaged, either in analyzing dairy products to detect adulteration, or in taking samples of them to prevent adulteration, or in various other ways to promote and develop the dairy industry. A great deal of his time has been taken up with the calibration of glassware used in the creameries of this state in connection with the Babcock test. Mr. Hoyt has taken much interest in his work and has applied himself diligently. He has often worked late in the evening to finish his examinations, or to prevent the work from accumulating in the laboratory.

The work of the clerk, Mrs. Jennie A. Love, has increased in proportion to the increase in the number of the bureau's inspectors; but as her years of experience have increased her ability, she is able to accomplish the work with celerity and accuracy.

### INSPECTION OF DAIRIES AND DAIRY PRODUCTS.

During the two years covered by this report, the bureau has had from ten to twelve inspectors working all of the time. Nine of the inspectors on the force now are paid by the bureau, one is paid by Tulare County and one by Imperial County. The inspectors have made over 22,000 inspections of dairies, creameries, cheese factories, milk plants and condenseries during this period and have steadily been on the watch for possible adulterations and short weights of dairy products.

Each inspector, except those paid by Tulare and Imperial counties, has had from four to nine counties to cover and has been assigned to the following districts:

John Hynding-----	Del Norte, Humboldt, Mendocino, Trinity and Lake counties
James Smith -----	
Siskiyou, Modoc, Shasta, Lassen, Tehama, Glenn, Colusa, Yolo and Solano counties	
James Andreason--	Plumas, Butte, Sierra, Sutter, Yuba, Nevada and Placer counties
S. E. Watson-----	Sonoma, Napa, Marin, Contra Costa and Alameda counties
C. A. Starkweather-----	El Dorado, Sacramento, Amador, Calaveras, Alpine, San Joaquin, Stanislaus and Tuolumne counties
J. S. Canham-----	Merced, Mariposa, Mono, Fresno, Kings, Inyo and Kern counties
L. H. Pfitzer-----	San Mateo.
Santa Clara, Santa Cruz, San Benito, Monterey and San Luis Obispo counties	
Ray Hasson-----	Santa Barbara, Ventura, Los Angeles, San Bernardino, Orange, Riverside and San Diego counties

Harris T. Nye has been assigned temporarily to Imperial County. He has only been employed by the bureau since August 12, 1914, and will be assigned to some other district when the work in Imperial County is completed.

Mr. C. A. Peairs, deputized by the bureau but paid by Tulare County, has attended to the dairies in that county. Dr. H. Rodgers, deputized by the bureau but paid by Imperial County, has inspected the dairies in the Imperial Valley.

The inspectors have worked hard to obtain the desired results, often working early in the morning and late in the evening so as to be present during milking hours, which is the ideal time to inspect the dairies. They have nearly everywhere, had the hearty support of the public, the judges and the district attorneys, and good results have been obtained.

The inspectors are required to report to the Dairy Bureau the condition of every factory, dairy and milk plant inspected. To make sure that all equipment in use and methods employed are duly investigated by them, three score card blanks, one for the dairy farms, one for the factories (creameries and cheese factories) and one for the milk plants are furnished to them on which to report the numerical value of each item listed thereon. These cards are sent to the office of the bureau and filed, so that where the name and address of the operator of a dairy, or creamery, is known, the card can be referred to and conditions at the time of inspection noted. The score card is also valuable in that the inspector can point out to the operator each item that is imperfect and the seriousness of the defect, and can in that way, show him how conditions can be improved so that his score can be raised. The following are copies of the three score cards:

Score for equipment ----- plus score for methods ----- equals TOTAL SCORE -----

NOTE.—If the conditions in any particular are so exceptionally bad as to be inadequately expressed by a score of "0" the inspector can make a deduction from the total score.

Where conditions are insanitary, and the inspector does not feel sure that verbal instructions will be complied with, a notice is served on the owner, or on the person in charge, specifying in detail the changes required to be made. Thousands of these notices are served and most of them are complied with, but in a few cases prosecutions must be resorted to to get results.

The inspectors have, as can be seen from the report on prosecutions, enforced every part of the dairy laws. There have been prosecutions for the following offenses: milk adulteration; selling milk from insanitary dairies; violating oleomargarine regulations; adulterating cheese; adulterating ice cream; stealing cream samples and substituting others of better quality; underreading cream samples and reporting false tests; selling short weight butter. They have not caused the prosecution of any one unless there was an abundance of evidence of guilt. This is shown by the fact that we have been successful in over 99 per cent of the cases.

We have not brought upon us the ill will of the dairymen, or creamery operators, because we have prosecuted offenders; to the contrary, they have cooperated with us, as they desire that the product should be produced and sold pure and wholesome.

### PRODUCTION.

The first year covered by this report was exceptionally dry throughout the greater part of the state and in some localities where there is no irrigation, some of the dairymen had to dispose of some of their cattle. This caused considerable loss, but as the price of dairy products was high, it partly made up for the shortage in production. During the last year of this report there has been an abundance of feed in all parts of the state, but the average prices of the products have been lower than during any of the seven preceding years.

There has, each year, been a slight increase in the production of dairy products, but the consumption is still much greater than the output. Butter, cheese and evaporated milk is being shipped into this state from New Zealand, Australia, Oregon and the eastern states. It is impossible to get any information in regard to the amount of the product imported, except from New Zealand and Australia. From these countries alone, 1,574,900 pounds of butter were received in San Francisco during the first five months after the reduction in tariff took effect. During the spring and summer of this year there has been an abundance of feed and sufficient butter produced for home consumption. Very little has been imported from New Zealand, or Australia, since February 21st of this year.

Since 1903 there has almost every year, except the last two, been a decrease in the production of cheese, and by far the greater part of that product has been imported. During the two years ending September, 1914, there have been a great many new cheese factories established, and

a considerable increase in the production, but still more than one half of the cheese consumed in the state is imported.

#### OPPORTUNITIES FOR DAIRYING.

Opportunities for dairying are perhaps greater in California than in any other part of the world, but certainly greater than in any other part of the United States. The grass, clover and alfalfa grows all through the year. In the eastern states the farmer hopes to make hay in his alfalfa field in June of the next year after seeding. In this state several good cuttings are sometimes secured the first season, as for instance, at the University Farm, at Davis, the alfalfa field in front of the dormitory was sown on March 11th. On May 8th, the weeds were cut and allowed to lie on the ground. On June 15th, the first crop was cut, yielding 1.16

PLATE NO. 1.

tons of clean hay per acre. On August 10th, the second crop was cut, yielding 2.2 tons of hay of excellent quality, per acre. On October 7th, the third crop, 1.68 tons of hay per acre, was cut. Thus, over five tons of hay per acre were cut within less than seven months after the seed was placed in the ground. During October and November alfalfa still grows luxuriantly in most parts of this state, but what further crops were cut on this field is not known to the writer. Conditions were not particularly favorable, because the University had been promised water from an irrigation canal carrying water from Lake County, but in this it was disappointed and water for irrigation had to be obtained from a domestic supply pump. The field contained a little less than seven acres and was given only three irrigations during the season, of from five to six inches of water each time.

Plate No. 1, is a picture of the dormitory and alfalfa field. Note how thick the hay is upon the ground.

No single forage plant combines all the material for a profitable ration for dairy cows so well, as does alfalfa. One ton of alfalfa hay is worth about as much as one ton of bran, or shorts. In many places of this state a good stand of alfalfa can be cut as many as six or seven times during the season, and yield as high as nine or ten tons to the acre. Certain kinds of alfalfa will, in some localities, yield well from twenty to twenty-five years without reseeding. The deep soil and long growing seasons in California make it especially well adapted for the growing of this crop.

A great deal of land in this state which had become unprofitable for grain farming ten or twelve years ago, and which was offered for twenty-five to thirty dollars per acre, has been found to produce excellent alfalfa when put under irrigation, and is now selling for two to three hundred dollars per acre. There is yet a great deal of land in this state suitable for alfalfa which can be purchased at a reasonable figure.

#### IMPROVEMENT IN DAIRY CATTLE.

The dairy cattle in this state have been greatly improved in the last few years. Much of this improvement is due to cow-testing associations which have been started in the different localities. Through the effort of Dr. Leroy Anderson, the Ferndale association was started about six years ago. This association has done remarkably good work. At the time of its last report for the year ending February 15, 1914, about 2,100 cows were being tested and records kept of each cow's monthly production; but before the first of May, this year, the owners of 2,000 more cows had made application for membership. This, however, was more than could be handled with the men employed, and about 200 cows had to be refused. The association employs three men who do the work of testing and keeping records. It has a horse, wagon and testing outfit for each man who moves from place to place in his district every day, except Sunday.

At the time of its last report, nearly one year ago, there were 499 cows tested by the association during the previous year whose yearly yield had been less than 200 pounds of butter fat each. To account for the fact that there were so many cows yielding less than that which should be the lowest yield for a good dairy cow, it must be remembered that many herds are taken in each year from which the unprofitable cows are not rejected until the year's test is finished.

Owing to the great number of cows handled by this association it has been able to do the testing, keep the records, and pay all expenses for horses, wagons and testing apparatus for 80 cents per cow per year. New members, however, are charged \$1.00 per cow for the first year, the extra 20 cents going toward buying additional apparatus. The Ferndale Cow-testing Association, now handling about 3,800 cows, is the

largest of its kind in any country, and the prospects are that more members will be added this coming spring.

There have been two cow-testing associations in operation in Stanislaus County for a couple of years, one at Modesto and one at Newman. In Newman 58 out of the 500 cows being tested, are producing from 1.5 to 2.8 pounds of butter fat per day. Two and eight tenths pounds of butter fat is about equal to three and five tenths pounds of commercial butter.

The Los Angeles County Cow-testing Association was started through the efforts of the State Dairy Inspector, Ray Hasson, in January, 1914. The members offering to join the association had 1,450 cows, but it seems that only 1,000 of them have been tested.

The Tri-County Cow-testing Association, having members at El Casco, Riverside, Corona and Chino, was also organized by Mr. Hasson. Work was commenced a few months ago. Seven hundred cows are being tested and it is hoped that many more owners of cows will join the association.

The Gridley Cow-testing Association was started through the combined efforts of James C. Andreason, State Dairy Inspector, and Professor Gordon H. True, of the University Farm, at Davis. The association was organized early this spring and most of the money necessary to pay for the apparatus, and part of one year's salary for the tester, was paid in at once, but owing to the delay in getting the necessary equipment, the work was not commenced until late this summer.

A testing association has also been organized at Bodega through the efforts of professors at the University Farm. Work was commenced on November 2d of this year. The association has twenty-five members owning about 1,100 cows.

A new testing association is also in operation at Woodland and among the cows tested are already found a large number that are great producers. This will probably stimulate the dairymen in the vicinity to make efforts to improve their herds.

The County Farm Adviser in Napa County is working hard to get a testing association started at Napa, and there are good prospects that he will succeed.

The following plates, Nos. 2 and 3, are pictures of a great cow, "Pieterje Bloom" and her two-year old daughter, "Pieterje Bloom II," owned by the University Farm, at Davis. Pieterje Bloom has, during one year, produced 23,591 pounds of milk containing 783 pounds of butter fat. This would be equal to about 910 pounds of butter. Her daughter, a two-year-old heifer with first calf, yielded in one year, 13,216 pounds of milk which contained 460 pounds of butter fat.

PLATE NO. 2.

PLATE NO. 3.

When the yield of these cows is compared with that produced by many of the scrub cows kept by some dairymen year after year, which cows produce only 75 to 100 pounds of butter fat per year, it can easily be seen why some dairymen find the business unprofitable.

The dairymen of this state should either weigh the milk of each cow and test it for butterfat to learn what each individual produces through the season, or associate themselves with other dairymen and hire a person to do it. To go on and retain in the herd cows that are each year causing a loss to the owner is a ruinous course of procedure. The aim should be to reject all that were found unprofitable and improve the offspring of those retained until they reached, as nearly as possible, the excellency of this great cow, Pieterje Bloom.

A small financial assistance by the state, by furnishing new associations with apparatus for testing, and books in which to keep the records, would greatly facilitate the matter of getting them started. In Denmark a large proportion of the expenses incurred in maintaining the testing associations, were for years defrayed by the government. The first association in that country was organized in 1895, and in ten years the number was increased to nearly 500. This little country is only one tenth as large as California. Canada has also expended a great deal of money to get this work started and kept up.

#### COST OF KEEPING COWS.

The expenses connected with the feeding, milking, care and keeping of cows vary somewhat in the different localities. The average cost connected with one yielding 150 pounds of butterfat per year is about as follows:

Feed .....	\$30 00
Milking and care.....	24 00
Interest on cost of cow at 7 per cent.....	3 50
Depreciation of cow.....	5 00
Interest on cost of equipment necessary in connection with keeping..	3 00
Total cost .....	\$65 50

Income from cow yielding 150 pounds of butterfat per year:

Butter fat, 150 pounds at 30 cents.....	\$45 00
Skimmilk, 4,000 pounds at 20 cents per hundred pounds.....	8 00
One calf .....	2 00
Total .....	\$55 00
Loss .....	10 50

Cost of keeping cows producing 300 pounds of butterfat per year:

Feed .....	\$45 00
Milking and care.....	27 00
Interest on cost of cow at 7 per cent.....	7 00
Depreciation of cow.....	10 00
Interest on cost of equipment necessary in connection with keeping..	3 50
Total cost .....	\$92 50

## Income from cow yielding 300 pounds of butter fat per year:

Butter fat, 300 pounds at 30 cents-----	\$90 00
Skimmilk, 7,000 pounds at 20 cents per hundred pounds-----	14 00
One calf -----	10 00
Total -----	\$114 00
Profit -----	21 50

**IMPROVEMENT OF SANITARY CONDITIONS.**

Most of the dairymen have responded generously to the public demand for better and more sanitary conditions of the dairies. During the last few years there have been hundreds of new cow barns and

PLATE NO. 4.

milkhouses built. Nearly all are made to admit plenty of sunlight and are well ventilated. They are so built that they can be easily kept clean.

Plate No. 4 is a new cow barn under construction. If it is built so that plenty of sunlight will be admitted to the interior it will, when finished, be a model barn of which the owner may justly be proud.

PLATE NO. 5.

Plate No. 5 is also a cow barn of recent construction. It is built as cheaply as possible except for the concrete floor, which is excellent. It has good light and ventilation, and if the operator is careful, milk of fine quality can be produced in such a barn. The only remarkable thing about it is that it will answer the purpose well, though it has been built with a very small outlay of money.

PLATE NO. 6.

Plate No. 6 is a very convenient and sanitary milk house. It is about 10 by 12 feet, has excellent light and ventilation, a good concrete floor, good drains and a screened porch where the utensils are stored out of reach of the flies.

PLATE NO. 7.

Plate No. 7 is the sanitary and nicely kept interior of a milk house where the milk is strained and cooled immediately after being drawn from the cow. It is as clean and light as a well kept kitchen.

PLATE NO. 8.

Plate No. 8 is a barn built from a plan furnished by the San Francisco Board of Health. It has excellent ventilation and will admit considerable sunlight. It is easily kept clean and free from dust, as no hay or other feed is stored in it. The old barn, to which the San

Francisco inspectors objected because of its insufficient light and ventilation, is used for the storing of feed. Health officers of many cities will not allow milk to be shipped into their city if hay, or other feed, is stored in the barn where the cows are milked.

Plate No. 9 is a typical Humboldt County dairy barn under construction. It is substantial and convenient and will admit a fair amount of sunlight. But to comply with some city ordinances partitions would have to be placed between the hay and the milking shed.

PLATE NO. 9.

### DAIRY LAWS.

The dairy laws are working very satisfactorily, and this bureau has no recommendations to make except in regard to pasteurization of milk and cream, and labeling of certain grades of milk and of certain milk products.

The Commission on Milk Standards, appointed by the New York Milk Committee, recommends that all milk not produced by tuberculin tested cows be pasteurized. A majority of the Commissioners believed that it would be advisable to pasteurize all milk of every grade.

The housewife can efficiently pasteurize the milk for the household by setting the bottle of milk in a vessel containing water and heating the water until the milk reaches a temperature of about 145 degrees Fahrenheit. The bottle should then be taken from the water, wrapped in a towel, and held twenty to thirty minutes. It should be then chilled at once and kept cold until used. Where milk is labeled "pasteurized," the consumer relies on this statement and it is, therefore, important that no milk, or milk product, is thus labeled unless it has

been properly treated. The law on this subject should be amended, defining the process to be used to entitle producers to label their product "pasteurized."

Milk, or milk products, which have been produced by assembling butter, or butterfat, with milk, or skimmilk, or with water and milk solids, if allowed to be sold at all, should be labeled "mechanically assembled milk, cream, or ice cream," as the case may be.

Milk from which part of the cream has been removed, but not containing less than 3 per cent of milk fat, should be labeled "adjusted milk." Milk containing less than 3 per cent of milk fat should be labeled "skimmed milk."

### ANALYSIS AND EXAMINATIONS IN LABORATORY.

The following glassware has been tested for accuracy for creameries, and other users, of the state:

Type	Number examined	Number approved	Number rejected
Babcock bottles .....	13,066	12,550	516
Pipettes .....	160	158	2
Acid measures .....	1	1	-----

Besides the Babcock glassware mentioned above, the following pieces of apparatus have been examined for accuracy:

Type	Number of pieces examined
Lactometers .....	11
Thermometers .....	2
Balances .....	8
18-gram weights .....	17
9-gram weights .....	23
Sets of weights .....	4
Total .....	65

Since December 1, 1912, the following samples of dairy products have been tested in the bureau's laboratory:

Substance	Number analyzed	Above standard	Below standard
Milk .....	451	305	146
Evaporated milk .....	60	39	21
Skim milk .....	12	-----	-----
Cream .....	780	767	13
Ice cream .....	229	133	96
Butter .....	25	24	1
Cheese .....	72	47	25
Whey .....	12	-----	-----
Water .....	2	-----	-----
Totals .....	1,643	1,315	302

## STATISTICS.

The producers of dairy products have complied with our requests for reports on their output, much better than in former years. There are, however, many who must be reminded three, or more, times before their report is obtained and it is difficult to get complete reports before the first of December.

## BUTTER PRODUCED DURING YEARS ENDING SEPTEMBER 30, 1913-1914.

County	1913. pounds	1914. pounds

## CHEESE PRODUCTION.

During the years ending September 30, 1913, and September 30, 1914, cheese was produced by the different counties as follows:

County	1913. pounds	1914. pounds
Amador .....	11,043	10,272
Butte .....	78,840	93,000
Colusa .....		25,944
Fresno .....	130,600	169,546
Humboldt .....	372,000	386,000
Imperial .....	110,000	185,600
Kern .....	54,700	36,275
Kings .....	136,850	54,750
Lassen .....	232,808	115,519
Los Angeles .....		55,050
Marin .....	554,180	558,630
Mendocino .....	26,192	
Merced .....	227,760	190,020
Modoc .....	46,936	70,394
Mono .....	12,000	8,000
Monterey .....	886,183	728,111
Napa .....	24,620	26,000
Sacramento .....	656,260	542,330
San Benito .....	382,322	269,577
San Joaquin .....	103,327	108,747
San Luis Obispo .....	156,380	246,090
San Mateo .....	134,878	204,175
Santa Barbara .....		10,000
Santa Clara .....	379,709	768,101
Santa Cruz .....	187,150	218,292
Shasta .....		45,407
Siskiyou .....	14,921	26,894
Sonoma .....	158,750	206,736
Stanislaus .....	82,500	71,500
Sutter .....	339,563	368,860
Tehama .....		27,992
Tulare .....	63,750	54,100
Yolo .....	14,850	16,903
Yuba .....	21,900	118,000
Totals .....	5,600,972	6,016,815

The following are the monthly receipts of butter in San Francisco for the two years ending September 30, 1914:

Month	1913-1913. pounds	1913-1914. pounds
October .....	2,035,900	1,538,100
November .....	1,819,900	1,433,300
December .....	1,696,500	1,703,100
January .....	1,767,500	1,931,600
February .....	1,378,100	1,689,900
March .....	2,008,100	2,107,200
April .....	2,694,700	2,811,200
May .....	2,614,000	2,435,300
June .....	2,106,200	1,964,400
July .....	1,711,100	1,871,600
August .....	2,593,600	1,765,500
September .....	1,479,500	1,329,750
Totals .....	23,905,100	22,580,950

The following are the monthly receipts of cheese in San Francisco for the two years ending September 30, 1914:

Month	1912-1913, pounds	1913-1914, pounds
October .....	956,000	616,400
November .....	700,500	776,300
December .....	757,800	736,100
January .....	599,700	559,400
February .....	482,800	704,600
March .....	792,000	739,700
April .....	657,600	1,044,700
May .....	915,500	865,100
June .....	958,100	1,282,700
July .....	919,300	1,027,300
August .....	1,214,000	1,079,000
September .....	570,400	660,200
Totals .....	9,523,700	10,091,500

### BUTTER PRODUCTION.

The following is the estimated butter production for the last twelve years:

Year	Pounds
1903 .....	34,786,289
1904 .....	35,636,969
1905 .....	41,961,047
1906 .....	44,044,578
1907 .....	44,599,211
1908 .....	48,469,585
1909 .....	43,899,018
1910 .....	45,989,140
1911 .....	50,380,736
1912 .....	54,940,886
1913 .....	55,542,709
1914 .....	59,286,460

### CHEESE PRODUCTION.

The following is the cheese production for the last twelve years:

Year	Pounds
1903 .....	7,218,639
1904 .....	6,133,898
1905 .....	6,020,672
1906 .....	6,418,480
1907 .....	5,928,946
1908 .....	6,262,194
1909 .....	4,431,194
1910 .....	4,648,348
1911 .....	4,640,491
1912 .....	4,785,617
1913 .....	5,600,972
1914 .....	6,016,815

## CONDENSED MILK PRODUCTION.

The following is the condensed milk production for the last twelve years:

Year	Cases
1903	126,874
1904	186,905
1905	244,878
1906	113,025
1907	134,907
1908	100,069
1909	83,476
1910	172,916
1911	116,384
1912	172,309
1913	172,800
1914	274,096

## BUTTER AND CHEESE PRICES IN THE SAN FRANCISCO MARKET.

Month	1911-1912		1912-1913		1913-1914	
	Butter, cents per pound	Cheese, cents per pound	Butter, cents per pound	Cheese, cents per pound	Butter, cents per pound	Cheese, cents per pound
October	30.68	14.57	34.00	16.92	32.48	17.03
November	31.39	16.50	33.04	17.93	32.56	18.37
December	33.03	15.96	33.66	15.89	31.85	17.69
January	35.38	16.15	34.28	15.44	29.92	18.06
February	34.60	16.42	35.10	16.63	28.19	18.89
March	31.42	18.85	35.43	15.47	22.85	16.45
April	27.71	16.92	29.10	15.88	23.06	14.76

The total amount of fines imposed during the two years ending December 1, 1914, for the violation of the dairy laws, is \$10,104.50. Half of this amount has been paid to the counties in which the cases have been tried. The other half has been paid to the State Treasurer and has become part of the State School Fund.

# REPORT OF ADVISORY ROAD COMMITTEE OF THE STATE OF CALIFORNIA.

*To the Honorable, the State Senate, and the State Assembly, Session  
1915:*

Chapter 77, Statutes 1913.

ASSEMBLY CONCURRENT RESOLUTION NUMBER THIRTY-ONE.

*Relative to the appointment of an advisory committee to  
confer with the State Engineer and the State Board of  
Control regarding state roads.*

(Filed with Secretary of State, June 2, 1913.)

*Resolved by the Assembly, the Senate concurring,* That an advisory committee consisting of two members of the Assembly and two members of the Senate be appointed to confer with the State Engineer and the State Board of Control regarding location, construction and maintenance of state roads other than state highways constructed under and by virtue of the "State Highways Act" of California and to report back with recommendations to the forty-first session of the Legislature. The Speaker of the Assembly shall appoint the Assembly members of the committee and the President of the Senate shall appoint the Senate members of the committee.

*Resolved,* That the sum of fifteen hundred dollars is hereby made available for the purpose of defraying the expenses of such committee; and half of the amount to be paid from the contingent fund of the Assembly, and one half to be paid from the contingent fund of the Senate, and the State Controller is hereby authorized and directed to draw his warrant in favor of the chairman of said joint committee for such expenditure as the same may be certified to him from time to time by the chairman of said committee, and the State Treasurer is hereby authorized and directed to pay the same.

Agreeable to the provisions of this resolution embodied in chapter 77, statutes 1913, the President of the Senate appointed Senators P. F. Cogswell and Benjamin F. Rush. The Speaker of the Assembly appointed the Honorable W. F. Chandler and the Honorable A. G. Kuck. The State Board of Control selected the Honorable Clyde L. Seavey to represent that body.

Through the efforts of Hon. W. F. Chandler of Fresno, we secured two large automobiles at Fresno, and the full committee left that city at 7:30 a.m., September 2, 1913, accompanied by Mr. J. E. Mitchell, superintendent of the Kings River Canyon Road. We proceeded by the way of Reedley and Sand Creek Road to the General Grant National Park, and thence over the State Road to Hume, a lumber camp in the

Sierra Nevada Mountains. At this point a meeting was held and the Honorable A. G. Kuck was chosen as chairman of the committee.

From Hume we were driven easterly about five and one-half miles to the end of the road. The Kings River Canyon State Road was provided for originally by the legislature of 1905 and an appropriation of \$25,000 made. The county of Fresno appropriated \$12,500. At the sessions of the legislature of 1909 and 1911 additional appropriations of \$25,000 for each session were added. With the exception of a little over \$400, this total amount of \$87,500 was required for the construction of the fourteen and one half miles of road, or at a rate of \$6,000 per mile.

The general appropriation bill for 1913 carries an item of \$4,000 for maintenance and improvement, making a total of \$79,000 furnished by the State to date.

The road begins at a point on the north boundary of General Grant National Park, and the intention of the original advocates of the road was that it should proceed easterly into Kings River Canyon and up said canyon.

Chapter 223, statutes 1909, providing for \$25,000 with which to complete the construction of said Kings River highway, stipulates in section 1 thereof that "the highway now completely located and surveyed and partially completed by the State of California from General Grant National Park to the floor of the Kings River Canyon, is hereby made a State highway.

This appropriation, together with former appropriations, was all expended in the construction of the road as far as Hume, nine and one half miles from the point of beginning.

The first appropriation made in 1905 was for the "purpose of locating and surveying and constructing a public highway from the General Grant National Park in Fresno County, thence easterly into the Kings River Canyon." Between the time of the appropriations of 1905 and 1909 the survey was made, and according to the language of chapter 223, statutes 1909, the highway was to be constructed as now "completely located and surveyed."

In the summer of 1912, State Engineer McClure made examination of the location and reported that said location had probably been made with a view of getting into the canyon as soon as possible, and then proceeding directly up the canyon for a number of miles.

It is interesting to note that the report made by the Highway Commissioner in 1905 reported a length of twenty-three or twenty-four miles, and that the cost of the construction of the first fifteen miles would be at the rate of \$1,350 per mile, and of the remaining eight or nine miles at the rate of \$3,125 per mile. During 1906 the survey was made into the canyon and completed in 1907, a distance of thirty-two

and eight tenths miles to a point in the canyon called Cedar Grove Hotel.

In 1912, State Engineer McClure made examination of the location and reported that the remainder of the road as surveyed would cost not less than \$200,000 and that it would probably cost much more, including, as it does, a bridge over Kings River. He reported that he knew of no reason why the road should be located so as to drop so soon into the canyon, and stated that for a scenic road, in his opinion, a better location and certainly a much cheaper one may be had by remaining on the higher ground and not entering the canyon until a point near the eastern terminus is reached.

This committee, while not being prepared for an extensive or close examination, observed sufficient of the topography of the canyon to be led to believe that Mr. McClure's contention is correct. Your committee, none of whom had ever been as far up the canyon as on this trip, questioned the wisdom of the State spending \$200,000 to complete a road which has no connection with any other road whatever, and would be used only by campers, hunters and those seeking quiet, scenic resorts in the high Sierras.

The road as completed for a distance of fourteen and one half miles is one of good grade, but the approach to it up to the present time from the west is very steep and rough. We are informed, however, that contracts have been let by Tulare and Fresno counties whereby the Sand Creek Road is to be continued easterly to the boundary of General Grant National Park on good grade. When this is done, it is our belief that travel will be very largely increased, although the road through the park is far from being a good one. We hold that if any more road is to be built by the State that chapter 223, statutes 1909, be repealed as to location, and another location made. Kings River Canyon contains some of the most bold and rugged territory and some of the most fascinating mountain scenery in the State, and the road, if continued, would pass through some of the most magnificent redwood timber land in California, and ultimately arrive at a point from which the Kings River could be easily reached. It would then become a popular resort for campers and tourists. Your committee, however, doubts the wisdom at this time of spending the amount of money that would be required to continue the road to the floor of Kings River Canyon, nor would it even recommend the extension without satisfactory evidence that its terminus there would be upon Federal or State property.

On the evening of September 3d we returned to the San Joaquin Valley, and at Exeter the Honorable W. F. Chandler was called back to Fresno, and here Mr. Mitchell also left us.

On the fourth we proceeded by the way of Porterville and Bakersfield to Mojave. On the fifth we motored east and north by the way of Olancho, Lone Pine, Independence, and Big Pine to the town of Bishop, in Inyo County. On the sixth we traveled from Bishop to Mammoth, a mountain resort in Mono County.

During the session of 1913, an appropriation of \$100,000 for a state road from Bridgeport, Mono County, to Bishop, Inyo County, was made, but because of so many pressing demands, however, on the treasury, the bill was not signed by the Governor. The Honorable George A. Clarke joined our party at Bishop and pointed out to the committee in a general way where he thought a road should be constructed between Bishop and Mono Lake. We were informed by Mr. Clarke and other Inyo County citizens that the appeal was made to the State, and would be repeated, for State assistance, not because Inyo County needed it particularly, but because of the long stretch of country through Mono County which must be traversed from the north before Bridgeport is reached, the general impression being that Mono County is not financially able to construct the needed road. We were led to believe that if the State will give adequate assistance in the construction of a good road from Bridgeport to the southern boundary of Mono County, Inyo County will gladly met our work there and construct a good road from there south. Your committee commends favorable consideration of this project.

For scenic beauty there are few, if any, regions in our great State that surpass this country between the southern boundary of Inyo County by way of Independence, Bishop, Mammoth and Casa Diablo Hot Springs and Mono Lake to Bridgeport. The tillable portion of Owens River Valley is some eighty to ninety miles in length north and south, reaching from Owens Lake northerly, and is from ten to twelve miles wide, and the center of the valley lies from fifteen to twenty miles easterly from the crest of the Sierra Nevada Mountains. This crest of the high divide forms the boundary separating the counties of Inyo and Mono on the east and the counties of Tulare, Fresno, Madera and Tuolumne on the west. This high mountain crest would naturally be taken as a geographical line of division, and looking at it from an impartial view point, Inyo, Alpine and Mono counties would naturally belong to the State of Nevada. The Owens River Valley, Long Valley and the Owens Lake Valley do not have adequate or suitable roads westerly into the great heart of California, or to the north, in our own State.

We next examined the Mono Lake Basin State Road, located in Mono County, from Tioga Pass easterly nine and three tenths miles to a point in Lee Vining Creek Canyon about three and a half miles west of Mono Lake. This road we found well located and in good condition. Tioga

Pass is at an elevation of something over 9,000 feet. Our State Road connects with the old Tioga Toll Road, which runs westerly and joins the Big Oak Flat and Yosemite Road. This road was built many years ago as a toll road, and is still claimed by private parties. It is fifty miles or more in length and is nearly all within the boundaries of the Yosemite National Park. It is constructed on good grades and should be taken over by the State if proper transfer can be made with claimants and proper arrangements made with Federal authorities for travel through the park. This road, together with the State road from Tioga Pass easterly, would form the best road over the summit of the Sierra Nevadas, between the point where the Southern Pacific Railroad crosses the divide in Nevada County, and Walker Pass in Kern County.

The county road between Mono Lake and Bridgeport is in fair condition for a mountain road, but a large portion of it is subject to wash-out, and we found several miles of it in very rough condition. For a reasonable expense a good road over a territory which seems to have fair material might be built, which would greatly shorten the distance between Mono Lake and Bridgeport.

We next examined the Sonora and Mono State Road, stretching from Bridgeport in Mono County westerly to Long Barn in Tuolumne County. With the exception of recent washouts, owing to very heavy storms, we found the surface of this road in fair condition, but the grade from the summit—which has an elevation of over 9,000 feet—for the first few miles is very steep, and in our opinion the amount of travel that this road would naturally get, even if the road were a fair one, would not justify the State in spending more money on it.

We next examined what is known as the Alpine System of State Roads. This system is made up of old county roads in El Dorado, Amador, Alpine, Calaveras, and Mono counties. The southern branch begins at the Calaveras Grove of big trees in Calaveras County and extends easterly, following the ridge dividing the water sheds of the Mokelumne and Stanislaus rivers. It has many adverse grades, which are very steep; especially is this the case from Ebbetts Pass in Alpine County easterly to Silver Creek. The grades are such as to be practically prohibitory for wheel traffic of any kind. From Silver Creek northerly to Markleeville and Woodfords, we found the road in fair condition, built generally of good road material and easy to maintain.

What is known as the Amador branch of the Alpine system runs from Woodfords in a general southwesterly direction to Jackson, the county seat of Amador County. This road, like the Calaveras branch, has many steep and adverse grades and at one point near the boundary between Alpine and Amador counties is but six and one half miles on a straight line from a point on the Calaveras branch.

From a point in Hope Valley, the Alpine system makes connection with the Lake Tahoe State Road by way of Luther's Pass and the upper Truckee River. Although the statute of 1911 names as a portion of the Alpine State Road a trail from Mt. Bouillon, "via Loupe," in Alpine County, to Junction, in Mono County, this portion has never been traveled by wheel vehicles. In 1912, the state engineer caused survey to be made from a point on the East Fork of the Carson River to a point near Coleville in Mono County, a distance of twenty-four miles.

Your committee believes that the idea of one good road extending northerly along the eastern base of the Sierra Nevadas through Bridgeport and Markleeville to Lake Tahoe, is deserving of serious consideration. This trip can not be made now without leaving California and making a detour into Nevada by the way of Holbrook, Gardnerville and Sheridan, back to Woodfords—a distance in Nevada of about thirty-three miles. With the construction of the twenty-four miles above referred to from the East Fork of the Carson River to Coleville, on which location a good grade can be built, this detour would be eliminated and it is possible that from Luther's Pass connection may be made with the Placerville State Road near the summit without dropping into the upper Truckee River Valley.

The old Lake Tahoe wagon road from Smith's Flat by the way of Myers Station to Lake Tahoe, we found in good condition, and it is our judgment that if the Tioga road may be made passable and the road from the junction in Mono County built as above suggested, northerly through Alpine County, by way of Markleeville, Woodfords and Luther's Pass to connect with the Lake Tahoe Road, the country would then be fairly well cared for. This would eventually cause the construction of a highway system extending from Lake Tahoe south along the easterly side of the Sierra Nevada Mountains through Alpine, Mono, Inyo, Kern and Los Angeles counties connecting with the State Highway in Los Angeles County; at the present time there is no good outlet either north or south from the great Owens River Valley.

We believe that the amount of travel on at least the Amador branch of the Alpine system, and on the Sonora-Mono road from the junction westerly, does not justify the expense the State has been putting upon them. It is certainly better to keep a few roads with good grades in good condition than to spend money on roads with grades that are practically prohibitory to all ordinary traffic.

Our next examination was what is known as the Myers-McKinneys State Road, extending from Meyers Station on the Lake Tahoe State Road northerly to Tallac and McKinneys Station on the west side of Lake Tahoe. This road we found located on good grade and in connec-

tion with the Lake Tahoe Road, will, undoubtedly, be a popular and useful connection to our road system.

Our next examination was on the Emigrant Gap Road, extending from a point near the west end of Donner Lake in Nevada County, westerly to Emigrant Gap, a distance of twenty-eight miles. This road was in good condition and it gave evidence of having received considerable traffic during the summer season.

Your committee went over the lines of proposed highways in Imperial County by automobile, going into Imperial County by way of San Bernardino, Redlands and Banning to Brawley, which is the most northern town of importance in Imperial County, and returned to Los Angeles by the way of San Diego and the coast route.

Imperial is the youngest county in the State, but has already assumed large commercial importance and has a very considerable population. It is reached and traversed through long distances of desert country. The State Highway will penetrate it by the southern route, connecting San Diego and El Centro and will afford easy egress and ingress to the most southerly portion of the sea coast. The Ocean to Ocean Highway Association, through its Los Angeles auxiliary, has spent about \$40,000 on that part of the Banning and Brawley road between the south line of Riverside County and Brawley. This northern entrance to Imperial County, while improved by the money expended upon it, which is largely in the nature of permanent work in the shape of concrete bridges and fords, is yet very far from being an ideal road. It leads through a wonderfully fertile section, known as the Coachella Valley, and also affords opportunity for connection with the great Palo Verde Valley, lying adjacent to the Colorado River and situated north of the Imperial Valley in Riverside County. This valley is almost an empire in itself and easy transportation into it means the development of great wealth for the State. Palo Verde and Blythe are now reached by a good road from Glamis, a station between Mammoth Wash and Yuma. Legislative action for an appropriation of \$75,000 for this road between Banning and Brawley was taken in 1913, but the appropriation did not receive executive approval.

It is the opinion of this committee that the road from Banning to Brawley should be assisted by the State on that portion lying between the southerly boundary of Riverside County and the high line ditch northwest from Brawley. This would give a more direct route to Los Angeles City and to the center of the State, and would be entirely free from the heavy grades and dangerous curves of the State Highway through the mountains from San Diego to El Centro.

There is demand for further State appropriations for this road and that it may be continued through Mammoth Wash to Yuma, as that is the only practical route to the Palo Verde Valley; also for a road

leading from El Centro to Yuma connecting at the former point with the State road to San Diego. The former route offers great opportunity for the development of territory now practically shut off from civilization by vast stretches of almost impassable sand; the latter is the most direct route from Yuma to the county seat of Imperial County, and thence to the coast at San Diego.

These recommendations are not intended by this committee as applying particularly to legislative action this year, but only as a general policy to be carried out by the State in making appropriations for roads that would form either connecting links or laterals opening up country or territory at present inadequately provided for and where, in the judgment of this committee, State aid is absolutely required if the roads are to be built.

While the committee used as much expedition as possible, averaging about one hundred twenty miles per day over some of the roughest territory in California, we were unable, with the amount of the appropriation provided, to cover all of the roads presented for consideration, and were unable on account of lack of funds to cover the roads through Tehama, Siskiyou, Trinity, Modoc, Humboldt, Mendocino, Colusa, Glenn and Lake counties; neither did we touch the proposed roads between the San Joaquin Valley and the sea coast.

Respectfully submitted.
